I think you have just gone on to prove my point. If that's what you
took
from studying for an Extra class test, and much of the test was of that
nature
then its mostly pointless anyway, just a matter of going through the
motions.

There should be a supplemental test for becoming a VE, that should be
taken by any licensee who wishes to be a VE, regardless of his license
class.
It is wrong to waste the much more limited number of questions on VE
subjects
instead of questions related to technical or operational subjects when
the total number of questions has been seriously reduced already.

A lot of people who have already left the hobby, to be sure. Evidently
no one at the League is very concerned, not that they could do anything
about it anyway. FCC is pretty well disengaged, just waiting for the
time to take away
spectrum because "we didn't modernize". Meanwhile they were the biggest
cause of that lack with the restructuring and reduction in testing
standards.

What this is leading up to. *IMO* is a single class license in the ARS that will be about as simple and easy to get as the old Class D CB license where you read the rules sheet, fill out a form and mail it in. In fact that might just be a good suggestion to make when their next NPRM comes around. Why keep up the charade?

Yep, FCC rules say that in a emergency where life or property are at risk anyone is authorized to use any communications means at their disposal to effect the needed traffic handling. A nocode tech could even use Morse code if he needed to. Not that he would be able to.

And again, you attribute statements to me that I *did not* make. You really have learned your trolling lessons from Cecil quite well.

I'll say it one more time... the government is not about to allow hams carte blanche to
use whatever codings they wish to do whatever they wish with ham radio. If FCC should happen to stumble and make the mistake of trying to authorize that I have no doubt whatever the move would be very quickly cancelled by higher authority. FCC *isn't* the final authority. They do the bidding of congress.

>
>Then you have a very archaic view of expertise.

How so? Isn't Morse widely used by hams? Doesn't "expert" mean that someone
is very skilled and knowledgeable in ALL aspects of something? I don't see
how someone could claim to be an "expert" amateur radio operator and yet
have no Morse/CW skills. It would be like saying a driver who could not drive
a manual transmission vehicle was an expert driver.

>> But I also do

And...?!?!

There are two predominant political parties in the United States, and a
handful of other "also rans".

None of which hold a majority of any part of the population.

Ergo, WHY should the ARRL be any different?

Your current "excuse de jour" draws analogies between the ARRL and an
airplane modellers organization. I am willing to be the AMA does not
"represent" a majority of those involved in THAT past time, either.

Come to think of it, I wonder how many ex-radio technicians there are out
there and what percentage of them YOU represent..?!?!

Hmmmmm.......

Ah, yes, a "troll," which in your parlance means that I said something that disagrees with what you said.

Dick, if the government were to make a decision not to permit carte-blanche encoding, the only reasonable reason to make that decision would be that they wanted to monitor Amateur communications for covert transmissions.

> I'll say it one more time... the government is not about to allow hams carte
>blanche to
>use whatever codings they wish to do whatever they wish with ham radio.

And I will say it one time, too, Dick; you are wrong. Amateurs can use whatever encoding they wish within Amateur Radio, with the requirements that the modulation type be legal for use on the frequency being used (ie, no phase-shift keying on 50.05 MHz) and that the encoding method be publically documented. In correspondence with ARRL, they have clarified that posting the encoding method on a public web site is sufficient public documentation.

This in no way would stop the evildoers you apparently see poised to take over ham radio from very quietly posting their secret code on a web site and sending a message via ham radio.

The "authorities" haven't overturned the decade-old FCC rule on unspecified digital codes yet, Dick. Another "any day now" sort of thing?

>FCC *isn't* the final authority. They do the bidding of congress.

Then write to your Congressman and tell him that the rules that permit the use of unspecified digital codes are a risk to national security.

Dick, you can't be serious. I doubt that 1/3 of hams know the formal NTS procedures. Nowhere near 1/3 of hams have participated in formal traffic handling. Are you really suggesting that people could just jump right in and handle formal traffic with absolutely no practice or skill?

I disagree.

My conclusion that your statement was pretty far out was related to the thought
that spies and terrorists will develop new digital encoding methods and use ham
radio to communicate covert messages if the FCC allows hams to develop new
digital encoding methods ans use ham radio for its intended purpose.

Fortunately, you are wrong, because the rules do permit hams to develop and use
new encoding methods.

No, I did not. And my statement is true: You did not pass the "full general" in
1975.

In 1975, the "full general" meant 13 wpm code receiving and sending, plus the
then-current General/Technician written test, taken in one session inthat order
in front of an FCC examiner.

Somebody who did not know the whole history might get the wrong idea from what
you wrote.

Why not say: "I took and passed the General/Technician written test in 1975"?
No possibility of misunderstanding when it's said that way.

The same was said about the code TEST in the past.

Did they ever have to deal with an actual emergency? Say, one where some of
their equipment didn't work?

>Changing
>frequencies is a lot easier than changing modes,

Not in all cases. You state it as if it were a universal fact.

> especially if all the operators
>are not practiced and prepared for their brand of CW traffic. For instance,
>Intel
>didn't have a straight key and, at the time, I couldn't handle the paddles.

That was simply a lack of proper planning and preparation. Or somebody with an
anti-CW/Morse agenda.

> them can't be tested ... nor would a "time in grade"
> experience requirement for advancement provide
> any assurance that the "skill" had been acquired.

Who is talking about testing any of these skills? Not me!

I'm simply saying that these are desirable operating skills for amateur radio operators. It was alleged that I and others only value Morse/CW skill, so I re-posted this list to demonstrate that I value many different radio skills. Not a word about testing.

The FCC obviously doesn't care about testing skills, so any such test is pretty much a moot point.

> Additionally, I don't think you can have an exhaustive
> "one size fits all" list without unnecessarily discriminating
> against people who don't fit your "cookie cutter" image
> of "the perfect operator" ... for example, people with
> disabilities.

A desirable skill is still desirable even if everyone can't achieve it, or hasn't yet achieved it.
>

Which means you would support drastic reduction/changes in written testing,
because most of what's in the writtens doesn't meet your definition given
above.
>
> Most of the stuff you list below is/can be learned by
> doing ... the license allows one to do ... get it?

Sorry if it wasn't clear that this list was about desirable skills to
have, not to be tested for.

Of course it's not to be tested. Just a skill to be developed.

Though it WOULD be interesting to put a bunch of hams in a "Survivor" type
situation and see who could get a rig built and call for help first...;-)

The point of the above is simply that the ability to function under less-
than-optimum conditions is a developed skill, and is part of "planning and
preparation".

> air.
>
> A useful attribute not doubt. How would you test this in a VE session?
> Who would decide what was pass and what was fail?

Here's an idea how SOME of the above could be tested, even though my list was
not meant to advocate any sort of testing.

An "operating skills test" could be conducted by having the would-be ham operate a simulated station to send and receive simple but useful messages - using any of a choice of modes. The simulated station could be as simple as a laptop with special software, hooked to another, out-of-sight-and-sound laptop operated by a VE.

The would-be ham is given a message and instructed "Go to one of the following frequencies and send the message to (call of station to be contacted)". The would-be ham gets to choose the band and mode, and even change band/mode if conditions require. Scoring is by exception, looking at various skills, like the use of standard phonetics.

Of course since the FCC is simply not interested in skill testing, this is all simply a moot point.

Let me reiterate that the list was simply to illustrate some desirable operating skills, and not any sort of testing for them.
>
> Also, how would you propose to purge all of the existing ops who
> couldn't "cut the mustard" according your "cookie-cutter" standards,

Who said anything about purging or testing anyone? Not me.

> Or would old timers be 'inherently OK' even if they did not
> meet all of these standards?

What test?

Think about the skills in terms of desirable goals, not tests to be passed.

So you believe your new-found discovery will cause the FCC to drop the
amateur
radio regulation prohibiting codes and ciphers? Yeah, right!

Why do you think that regulation was formed in the first place?

There he goes again. Did I say that it was "close to being the equivalent
of a degree"?
No I did not. But I know from past experience that before your time an Extra
class license test
was condsidered, (this I was told by an FCC district engineer) to be at least
as difficult as
a First Class Radiotelephone License, which was required to be chief engineer
of a
commercial radio or TV station. So your assertion that nothing has changed
comes up
VERY lame.
I'm sure that were that FCC district engineer still alive today he would
hold quite
different beliefs.

Really? Have you had your coffee yet, Ed? You seem to be still asleep.
The reason for that rule is so that they will be able to monitor any amateur
transmission,
not that they plan to. Is that so strange?

That is NOT the argument, of course. The "publication" rule handles it all quite
well.

Does anything ever stop evildoers from breaking the law? Not that I ever could
determine.
Did banning ham radio operators from operating stop spies in WW2? Not likely, but
it
sure helped monitors sort out what was present on the ham bands. Just as asserting
some
control over what hams do still would.

So what? Do you really think that a formal NTS net would refuse to work a ham on
CW
who called in with emergency traffic just because he didn't follow procedures?
Are you that unfamiliar with ham nets?

> Nowhere near 1/3 of hams have participated in formal traffic
> handling. Are you really suggesting that people could just jump right in and
> handle formal traffic with absolutely no practice or skill?

I'm saying that hams won't require a station calling in with emergency traffic to
hold those
skills. They'll work with him to handle his emergency. Sorry to find so many here
who
evidently wouldn't.

It was probably just about the same level of difficulty. And it is not before my time; I have passed both exams.

>So your assertion that nothing has changed comes up VERY lame.

Plenty has changed since I was first licensed, Dick. For me to obtain all amateur privileges, I passed the General exam. I did so after studying a 16-page study guide. The Extra, though harder than the Extra of today, I believe, was a "vanity" license only, conveying no substantive additional priveleges over the General.

The limiting factor is not in the encoding methods, Dick; we have sufficient flexibility there already. The limits are in content, where digital voice is allowed in the voice/image bands, but the same bandwidth could not be used to send data.

Hey, Cecil

I can vouch that unless Dick has been deviously plotting an alternative identity for some time now, Valentine is indeed who he says he is.

something struck me as familiar about the name - there just aren't that many people running around with nams like that. I remembered Valentine from astronomy, one of my other hobbies. Lo and behold, I looked up some messages from the old astro-officers list I used to belong to, and there he was.

You are now a real person, Valentine!! (big grin)

- Mike -

Jimbo, Jimbo join the program. You have been pronounced 'archaic' or
'legacy' even which should be your signal by the Theologian and Telephone
Sanitizers Union Code to slink into the netherworld. Your unworthy body
has been pronounced upon, now go somewhere and die.

You are dealing with people who will become instant weather critics and
take credit for the rain but don't look to them to help you caulk an ark,
or for that matter actually DO a damned thing.

When we tolerate shoddy philosophy because philosophy is an exalted
profession,
and scorn good plumbing because plumbing is a humble calling,
we will soon find that neither our theories nor our pipes hold water.

With thanks to the late John Gardner.

Do you refer to my pride in being a radio amateur, Len. Pass a radio amateur licensing exam--any of 'em--and you can swell with pride too, Leonardo.

> Tell us about this "accident." Did that happen while on secret

> Tell all, beep those notes, strike that chord, be a lieder of men!

Gee, from your tone I'd have to guess that you're still smarting at having to limit your "amateur radio" activities to your postings here.

You can comfort yourself by obtaining full voting membership in one of the SWL organizations.

Dick, has it ever occurred to you that the way you compose your statements just
might be the problem? According to you, you rarely say what you meant to say.
A small amount of care in composing your posts will alleviate the problem.

Since the tests obviously haven't been dumbed down, you must therefore be talking
about the test takers.

We didn't have an actual emergency while iEARS was in operation and I was
at Intel. We had backup equipment including generators and solar power.

> >That's the way Intel had their emergency communications organized, Dick.
> >Changing frequencies (at Intel) is a lot easier than changing modes,

I'm obviously talking about Intel iEARS. It was certainly easier for me to
change frequencies than try to learn to use a paddle during an emergency.
I have added the context back in which you trimmed out of my statement.

> >Intel
> >didn't have a straight key and, at the time, I couldn't handle the paddles.
>
> That was simply a lack of proper planning and preparation. Or somebody with an
> anti-CW/Morse agenda.

Actually it was a pro-code Extra who specified the use of a paddle only and
prohibited the use of a straight key. He said , "Real hams don't use straight keys!"

What I am saying is that a ham with minimal use of Morse code should not be trying to participate in a formal CW traffic net. What is it about, "I'm talking about CW emergency nets." that you don't comprehend. Ed thinks that less than 1/3 of hams are capable of successfully participating in a formal CW emergency net.

> > You really think someone can effectively use CW after not using it for half a
> > century?
>
> Well you seem to think its just fine for him to be able to not use CW at all.

I am not making a moral judgment. I am making a rational value judgment. I wish that all hams were skillful at CW, but I know in reality that they are not.

> > net.
>
> Only if he needed to pass important traffic and was unable to do so. Why should it matter
> if he is not highly skilled when he was the only means of getting the traffic handled?

Do you really think a formal CW emergency net is going to put up with a ham who sends/receives Morse code at 8wpm? Dream on.

I suggest that you run your own experiment, Dick. Check into a CW traffic
net at 5wpm and see what happens. I have found that they won't even slow
down to 13wpm and don't seem to know the meaning of 'QRS'.

There's absolutely nothing prohibiting a driver from being an expert in
driving automatic transmission cars. He may have attended the bodyguard
driving class without performing those driving miracles using a stick shift.
I possess engineering expertise without knowing much about civil engineering.
A field of expertise can be extremely narrow. A person can be an expert amateur
radio operator without ever having used SSB, for instance. A field of operational
expertise can be extremely narrow.

One is supposed to meet the requirements, Dick, and that's all. Actual
cheating is illegal. Any other procedure for meeting the requirements
is acceptable to the sovereign government of the United States of America.
If it is acceptable to the FCC, why is it unacceptable to you?

"Codes and ciphers?!?" :-)

What "rule" is that?

FCC regulations clearly permit International Morse Code mode
on all amateur bands except for a small portion of the 1.25m band.

No US radio amateur may transmit anything "intended to obscure
the meaning" of a communication.

"Codes and ciphers?" I don't think so. Isn't there a CODE test
for two of the three US amateur licenses?

>My goodness, you mean that all those people who are not ARRL members read
>rrap and think I am an ARRL apologist?

Some DO think that. Try to live with it. Everyone else must.

>>How many individuals or local clubs could afford the legal fees to
>>contact the FCC in a formal way in the before-Internet days?
>
>All it ever took was a letter. Another ridiculous conclusion. You lose.

No "loss." All it takes to confirm that is a trip to the FCC Reading Room and do a letter count and letter origin tally on previous FCC requests for Comment on past amateur-radio-related issues.

Is it a "ridiculous conclusion" based on over 2600 individual Comments exclusive of the ARRL's on 98-143?

>>How
>>many non-legal amateurs knew of the proper format of legal filing

>>in order to gain recognition and consideration before the
>>Commission?
>
>ARRL put that information in its FCC Rule Book and would gladly tell someone
>how to file comments. You lose that point, too.

Again, no "loss." If "all it took was a letter," why does the ARRL
have a legal firm representing them in DC?

Why does the ARRL insist on being a "middleman" in "how to file
comments?" The FCC explains the procedures directly on its
website.

>>The "last time we went through this" I said about the same as I had
>>on previous times...that the ARRL is now LOSING some of the
>>exclusivity in representation when the FCC has made it much
>>easier for everyone to comment to them directly.
>
>And a good thing that is. That is why ARRL asks hams to make their views
>known in FCC filings.

Question repeat #1: Why does the ARRL keep a legal firm in DC
if "all it takes is a letter?" Can't the ARRL Hq staff compose a
"letter?"

Question repeat #2: Why does the ARRL have it OWN "FCC rule
book" when the FCC has its own rule book available free for
download and explains the procedure and format for Comments?

>Yeah, there is "spin" going on, Len, but it is all yours. You will say
>anything, no matter how distorted or ridiculous, to try to defame ARRL.

Tsk, tsk. I'm just asking questions.

>>I'm trying to get exact answers. I don't get those. What I get are
>>standard boilerplate "the ARRL can do no wrong" misdirections
>>into other areas.
>
>ARRL can do wrong. And calling opinion different from yours "misdirection"
>is a pretty feeble debating tactic. You lose again.

"Misdirection?" I've asked direct questions. I get so few answers
but am bombarded with misdirection that I've come to the
conclusion that direct answers on specifics are only answerable
by attempts to promote ancilliary subjects. In other words, "spin."

>If you wish to believe that I am controlling your mind, that is your choice.

Not possible. :-)

See the misdirection above? I've made a direct statement that the
ARRL has controlled the opinions of its members and others since
it was first formed. I've shown a few examples of such control and
influence. I've had vociferous denials of same from believers and

the usual misdirection into personal attacks.

What is almost always overlooked is that a large organization MUST try to influence others that it is the "best" organization. That is not "bad," just survival. Spin and opinion-influence techniques are not "bad," just standard practice in politics and in advertising. Those are all-pervasive in our society.

What many consider "bad" are the holier-than-thou pronouncements that an organization survivor that an activity could only succeed and continue on the basis of that organization's "leadership" and "representation." That includes self-defining phraseology that it deems itself "important" to all of amateur radio...because it pronounces itself to be so. The ARRL does not readily accept negative criticism as a group, a common failing in entrenched organizations having survived a long competitive history of various amateur organizations. That is a common failing due to its very human officials...they can do little wrong...just ask them.

After all these years (88) the ARRL still only "represents" less than a quarter of all licensed US radio amateurs. The ARRL is almost the oldest organization in radio and is certainly the largest devoted to amateur radio. It would seem logical that its membership should be higher than it is. The old spin tactics don't seem to have been that good. Maybe its time for some truth for a change...

There are very few who can swell as much as lil Davie. :-)

>> Tell us about this "accident." Did that happen while on secret
>> air force duty in a commie squadron?
>
>What does your statement mean, Len?

Why does lil Davie "answer" a question with another question?

Let me rephrase it since "commie squadron" is an old military
nickname for "communications squadron."

Did that "accident" happen while on duty in the air force in a
communications squadron?

Perhaps it was "while doing work for NASA?"

>> Did that happen while defending the free world with morse as
>> the only ham in all of Guinea-Bissau?
>
>What does this one mean, Len?

Oh, my, lil Davie is all a-twitter again.

What does lil Davie's question mean?

>> Were you injured by angry natives of Tanzania while unloading

>
>What does this mean, Len?

What does lil Davie's question mean? :-)

>Gee, from your tone I'd have to guess that you're still smarting at
>having to limit your "amateur radio" activities to your postings here.

Tsk, tsk, bad setting of lil Davie's tone control. :-)

Actually, there are no such "limits," but lil Davie is not content to
remain at anchor like the old blimp gas bags...he has to ignite
himself and flame all over whenever someone brings a needle
into his vicinity. Tsk, tsk, so sensitive! The Hindenburg II...

>You can comfort yourself by obtaining full voting membership in one of
>the SWL organizations.

Now why should one have to do that?

I have full voting privileges in the IEEE. I'm a professional in radio.

I thought it might be fun to have an amateur radio license as
well as a commercial license, but that "fun" concept seems to
have disappeared after certain others stepped in, swelled to a
straining point with their mighty DX accomplishments, dictating
their new regulations on "fun."

The "fun" seems to be a strict obediance to the new obersturm-
bandsfuhrers swaggering about with sticks at the ready, snarling
orders on what others should "enjoy." They are superior for they
have told everyone they are. All must believe them.

Gruss gott...

I have found the opposite - IF you check into a slow/training net. We have had one here in EPA (PTTN) for longer than I've been a ham. It precedes the regular section net. I learned traffic handling on PTTN and refined my skills on EPA. Was regular 3RN rep for a while. Even went to EAN a couple times.

And did lots of it with a straight key and homebrew rigs.

We are not talking about slow/training nets, Jim. The point is that
a bona fide emergency CW traffic net will not tolerate a 5wpm operator
anymore than a bona fide US emergency SSB traffic net will tolerate
an operator who speaks broken English.

>>with that. He didn't have a problem when I didn't post here for 6 months,
>either.

>...then Haynie changed his mind over several years.

Not at all. He does not believe that ARRL should have a presence on rrap. Our internet outlet is the ARRL web page. He does not have the right to tell me where I spend my personal time, nor would he want to.

>It is obviously good to have as many propaganda outlets as possible.

Yeah, but if I were the ARRL propaganda outlet, I wouldn't have time to work on RFI.

>>My goodness, you mean that all those people who are not ARRL members read
>>rrap and think I am an ARRL apologist?

>Some DO think that. Try to live with it. Everyone else must.

Whew, only "some" now. You had me worried for a bit. "Some" think that ARRL has Ed Hare be their secret propaganda outlet on rec.radio.amateur.policy, too. I can live with it just fine, thanks.

>Is it a "ridiculous conclusion" based on over 2600 individual Comments
>exclusive of the ARRL's on 98-143?

That is great, Len. I am glad that each and every ham with a view sent that view to the FCC. QST and every other ARRL outlet asked hams to do just that.

>Again, no "loss." If "all it took was a letter," why does the ARRL
>have a legal firm representing them in DC?

To write the letter, Len. Duh!

>Why does the ARRL insist on being a "middleman" in "how to file
>comments?" The FCC explains the procedures directly on its
>website.

Um, the same website that ARRL links to in the part of ITS website that tells hams how to file comments? You are seeing the Devil behind every bush!

>Question repeat #1: Why does the ARRL keep a legal firm in DC
>if "all it takes is a letter?" Can't the ARRL Hq staff compose a
>"letter?"

Sure, I compose them all the time, but not for FCC filings. Chris composes them better and he knows the law. We have a deal; he doesn't tell hams how to fix RFI problems and I don't tell him how to represent ARRL with the FCC.

>Question repeat #2: Why does the ARRL have it OWN "FCC rule
>book" when the FCC has its own rule book available free for
>download and explains the procedure and format for Comments?

Because hams want to buy it. Those that do apparently prefer the plain language explanations to the rules.

>Tsk, tsk. I'm just asking questions.

Well, there you go. You did, after all, chastize me for asking questions, now, di'n't'cha?

>>If you wish to believe that I am controlling your mind, that is your choice.

>Not possible. :-)

>See the misdirection above? I've made a direct statement that the
>ARRL has controlled the opinions of its members and others since
>it was first formed.

I think that most members would feel that it is "not possible" that ARRL exerts some sort of mind control over them, Len.

>What is almost always overlooked is that a large organization MUST
>try to influence others that it is the "best" organization.

Big difference between "opinion" and "influence" and "control," Len. Talk about misdirection!

Anyone who has attained an amatreur radio license is entitled to pride
in that achievement. Perhaps you can share in that pride at some point.

> >> Tell us about this "accident." Did that happen while on secret
> >> air force duty in a commie squadron?
> >
> >What does your statement mean, Len?
>
> Why does lil Davie "answer" a question with another question?

Well, Leondardo, most of the time when someone answers a question with a question, he doesn't understand what the questioner meant.

> Let me rephrase it since "commie squadron" is an old military
> nickname for "communications squadron."

I was attached to the 46th Communications Squadron for two years. During that period, I never heard anyone refer to it as a "commie squadron". Either your quaint name for such an organization is a) archaic useage, b) used in the Army and not the Air Force or c) is BS.

> Did that "accident" happen while on duty in the air force in a
> communications squadron?

You writing a book?

> Perhaps it was "while doing work for NASA?"

...leave this chapter out and make it a mystery.

I didn't use the tone. You did. Who is lil Davy?

> Actually, there are no such "limits," but lil Davie is not content to
> remain at anchor like the old blimp gas bags...he has to ignite
> himself and flame all over whenever someone brings a needle
> into his vicinity. Tsk, tsk, so sensitive! The Hindenburg II...

Sure there are limits, Len. What do you have to do with amateur radio other than posting your lengthy diatribes in this venue? Who is lil Davy?

> >You can comfort yourself by obtaining full voting membership in one of
> >the SWL organizations.
>
> Now why should one have to do that?

So you wouldn't feel obliged to take pot shots at the ARRL. You don't seem to care for the fact that as a non-licensed person, you would not be permitted full voting privileges as an Associate Member of the League.

> I have full voting privileges in the IEEE. I'm a professional in radio.

I know it has been pointed out to you before: This isn't a "professional" radio newsgroup. This is an amateur radio newsgroup. Why not go blow smoke in the rec.radio.ieee or alt.ima.professional.radio.guy newsgroups?

> I thought it might be fun to have an amateur radio license as
> well as a commercial license, but that "fun" concept seems to
> have disappeared after certain others stepped in, swelled to a
> straining point with their mighty DX accomplishments, dictating
> their new regulations on "fun."

So what'd the fun go out of, ham radio licenses or commercial licenses? It wasn't clear from your comment. If it is ham radio which is a disappointment to you, let me wish you luck in finding a suitable new hobby--one where others will appreciate having a newcomer walk on their traditions, find constant fault with long time participants and with their largest and oldest membership organizations and having you, as a beginner, tell them how things should be. I'm sure that there are any number of endeavors where a guy like you would be welcomed with a hearty handshake.

> The "fun" seems to be a strict obediance to the new obersturm-

This is worth a thread all by itself. That is, testing is hardly necessary for amateur astronomy because one cannot harm or interfere with anyone else simply by observing astronomical objects with a telescope. And one is not using the publicly owned airwaves, divvied up by law, in so observing. "Learning" in Ham Practice has a PUBLIC dimension that totally separates it from other avocations, in my view. And the deliberate "dumbing down" of the tests risks unfortunate effects in the public realm having to do with the ultimate usefullness and even survival of Ham Radio itself, or significant parts of it. Yes, this comparison is worth a thread all to its lonesome.

I wonder what one- or two-line response Mr. Hare will have to this post? I'm beginning to get interested in his strange economy where important issues are concerned.

Now, you see, this is an entirely different question than the one revolving around the tests. Sure, anyone passing the tech test and buying a radio, and then using it, is going to learn SOMETHING, if only how to push a PTT switch. However, the quality of that learning, and its ultimate level, will in large part be determined by the quality of the people the original vetting procedure allows into Ham Radio. I think that is patently obvious and gets at the root of the problem.

While I tend to agree with most of your input, I think you are expecting too much of the testing process. Kim is a juvenile airhead to be sure but I have been licensed as many here have since I WAS a juvenile and probably something of a geek at that. So vetting is too strong a term and concept to unload on a testing process. And of course the upright citizen may in the course of time become a depressive, alcoholic, meth-freak, or even an uncontrolled diabetic (yes, I have seen exactly that) so the test lacks the power to vet anyone on a permanent basis.

And even among the anti-social types having them in the tent pissing out has something to be said for it as opposed to (see 27 MHz) having them outside the tent pissing in.

The reduction in the code to 5wpm did not really seem to lower the barrier it presented. I have contended that it, like embarassment and boredom, is something one does to himself. So if you are of a mindset that being a good poseur equals (or betters - see Enron) actually doing anything it is a hell of a barrier to mewl, moan, whine, and agitate against and marshall all of your pseudo-learning to attack. And in fact we have seen just that: you will soon join the Group W bench with all the mother-rapers, father-rapers, and litterers -- you just haven't been around long enough.

You will also see Lifer Tech Syndrome. There are those that in preference to actually doing something that admittedly makes not a lot of regulatory sense (but few exams do) will over-compensate to the point of the absurd. These are guys who will join everything including applying for a medical waiver to QCWA, make annual pilgrimages to Dayton and HP Maxim's grave, and become instant geniuses on things like the regs, 160 grayline propagation, and (wait for it) digital techniques. Anything to achieve 'equality' but a blessed code test.

In a previous life, I played tournament bridge -- an easy game to play but a difficult one to play well. The secret to success is count, count, count and play with people better than you both to learn something and because they can be trusted not to do something stupid and insert a random event into things. But card games, to whatever extent they are still played, have been deteriorating for over two centuries. Bridge is a mixture of two other games, one of which was Whist (over which the sandwich was invented by the Earl of Sandwich) which one learns to play by now and again getting stuck in an absolutely atrocious position and playing your way out of it. Much like driving, one achieves success after a succession of brown stains in the shorts. It is now played mostly in the black community so when you play against a strong black pair you may find the bidding ridiculous but they will steal your socks without removing your shoes on the play of the hand.

Now how do you set up an exam system to weed out those who are not about to lose face and ego in the process of aquiring the brown stains???

Nope. Maybe an "expert amateur radio CW operator" or "expert amateur radio
digital
operator", or something similar.

>A field of operational
>expertise can be extremely narrow.
>--
Of course - but it must be specified as such.

btw, in June 1989 QST I was decreed to be a "definitive expert".

Now I begin to see what is happening. I think it is unfortunate that some people would let "others" dictate their enjoyment of a fine hobby. It doesn't have to be that way. In any hobby, there are a fair share of unsavory characters. It is sad if a person allows them to destroy their enjoyment of the hobby. It is doubly sad if a person doesn't even start a hobby because they see the activities of a few, and mistakenly believe all are that way.

You have no idea what you're talking about, in either case. I've heard both
those exact
things happen on the air. In fact, I've heard a slow CW station break into a SSB
traffic net and be recognized, and worked. It's the nocoders who are ethnocentric
about modes.

Yep. The owner is free to do it all himself, or ignore it as he wishes (and dares risk a citation in the rare event a Commission inspector shows up unannounced). Lobbying does
work, doesn't it? No one knows how many of them have fried themselves. And proper equipment maintenance is NOT getting done at many stations.

> and the commercial radio license Q&A are published
> for all to see.

Yep. Some examinees think the tests are hard, too.

> You wish things wouldn't have changed, Dick, but they have.

You wish I wish. I love lots of it, but some of it that you love stinks.

Are you kidding? With an FCC that vacillates from high qualification for
hams to virtually none? What might their lone easily swayed ham decide next
week? Could anyone feel safe with ANY sort of bet on them? Not me. I'm, just
"contemplating my navel".

Well stated. Indeed it does get to the root of the problem, one the
ARRL *and* the FCC would very much prefer to completely ignore, and
pretend didn't exist.

Uhhhhhhhhh Jim, an automatic transmission car is still a car. An expert automatic transmission car driver is an expert driver of *a* car.

> Which means that you're not an engineering expert.

I won't say I still am, but I once was an expert engineer. Depending on the context, the field may be irrelevant.

> >A field of operational expertise can be extremely narrow.

Please pay attention. The 8wpm guy is 200 miles away from the emergency location and is trying jump in and be part of the emergency net that is trying to help the people in the emergency area. If you were net control, what would you tell him?

Dick, don't even pretend that I endorse your thoughts of ham radio testing. I am of the firm opinion that testing does nothing to prove technical aptitude, it only proves that there is an understanding of materials that have been studied--whether by rote memorization or longer methods of information retention.

I am also a firm believer that everything to being a ham happens *after* one has passed the tests and has their ham radio license. I think you'll find that if you reread the posts I've made on this subject that is all I've ever said.

Why would you deliberately risk lives by slowing down emergency operations
because some Lid, 200 miles away from the emergency, is a terrible CW operator?

Absolutely! One cannot be a ham radio operator and learn nothing of radio technology and operating. At least I don't think they could. I have learned more than I ever wanted to know <BG> about building cables and getting electronic items to "talk" to each other in order to enable construction of an APRS tracker and full station. I have learned operating procedures in various nets, and under many different conditions. The only thing I haven't had to do yet is put disaster training to a test--and I hope I never do for it would mean someone is hurting somewhere.

Of course, in areas of ham radio that don't interest me, I remain just as ignorant. But then wasted knowledge is not much more than trivia.

Yes, I've learned a great deal...not to mention just plain having had the experience of a whole bunch of great people and get-together!

Nope, that it was intended to be different. 20wpm Morse code is no longer
one of those differences but the technical complexity of the Extra written
exam Vs the General written exam is still there.

Not at all, every ham is FREE to learn whatever they want.
BUT, even if some people don't want to learn tech stuff, that's
OK too. There is NO rule that requires anyone to learn
anything. It all comes down to individual choice.

> So, are you having memory problems also? If you'll bother to look back

> get a 'gateway to get on the air'? What's the point?

The point is that each ham is an individual. There's NO set
path that all must follow. As to multiple licenses, the FCC
already has narrowed that gap. IF you feel only ONE
license is needed, feel free to petition the FCC yourself.

> > I passed the Extra over two years ago...and have promptly

What else is it? I learned/memorized what was needed to pass
the test. What else did or would you expect?

> There should be a supplemental test for becoming a VE, that should be
> taken by any licensee who wishes to be a VE, regardless of his license

I actually agree that'd be a better approach.

Yep, if I recall, there's no requirement anymore for the "chief engineer"
of a commercial station to have a 1st Class Radio License.

Those are your exact words, Cecil. No mention of what kind of CW traffic net -
section, region, area, NTS, whatever. You did not exclude slow/training nets.

Have you ever checked into a CW net, Cecil?

>The point is that
>a bona fide emergency CW traffic net will not tolerate a 5wpm operator

>it allows one to do so many things?

Actually, there are a bunch of reasons the 'net is so prevalent and popular:

1) The content
2) The ease of getting started
3) The low cost
4) The aggressive marketing and huge infrastructure investment
5) The dependability

>(And that set could
>encompass, and expand on "traditional" ham radio things ...
>it's called "diversification" ... and it can be a key factor in

>COULD provide very useful amounts of bandwidth).

Sure - on UHF. And if the problem of content control can be solved. It's
not just a question of disallowing access to hotbabes.com and similar
stuff, but also filtering out all commercial content. Banner ads are a no-no.
>
>> That might be a way to get rid of a lot of hams.

Why can't there be both the old and the new? An amateur network of digital RF infrastructure on UHF and more "conventional" stuff at lower frequencies.

Using directional antennas, a bit of power and some "better modulations and codings", how far will amateur UHF links go? Lots farther than "around the block!

>> How do you plan to keep interest in ham radio up with that

Huh? By what bit of illogic do you jump to that conclusion?
I simply pointed out that encrypted text/voice has no need for
radio as the means of conveyence.

>
> Why do you think that regulation was formed in the first place?

Maybe Jim N2EY has a historical answer for us. IF the
concern originated to allow monitoring, the concern is pretty
lame today. Text can be encoded in hundreds of publicly
available codings yet I doubt the FCC cares or monitors
at all.

Cheers,
Bill K2UNK

In a word, NO. That YOU equate expert to mandate knowledge
in ALL aspects of anything goes far afield of what most people
would consider expert. Does a figure skater qualify as
an expert because s/he can't skate like a hocky player (or vise versa)?

> I don't see
> how someone could claim to be an "expert" amateur radio operator and yet
> have no Morse/CW skills. It would be like saying a driver who could not
drive

Take a look at the current crop of Formula 1 cars...most are
automatics now. The fact IS that one need NOT know how to
drive a manual gearbox to be an expert driver.

> >> But I also do
> >> not think that amateur radio or emergencies are the sole province of'

The lid 200 miles away should have enough sense to stay out of the way, or find a secondary path to pass whatever health and welfare message to a non-lid.

If the lid is the only operator on site at the emergency, then the CW net would have to slow down and work with him.

I would be a "lid" but I know that my best move is to stay out of the way and let the experts handle it.

Maybe if I eventually get a HF mobile rig setup. Cannot operate at my
residence whatsoever and PRB-1 does absolutely nothing to help me. Cannot
even put up a TV antenna or even one of those Dish Network satellite dishes.
This landlord must have some type of kick-back coming from the cable
company. Hopefully I will be moving in 3 years, and will be on the
begginnings of home ownership. Until then, mobile or portable operation is
the only way I can go.

You can always tell when Len thinks he is losing an argument. He starts making up dimunutive names for people, CAPITALIZING things in a religious light or accusing his opponent of misdirection.

His next step will be to change from the dimunutive form to the last-name semi-formal form. At that point, he really is getting desparate. :-)

Then we are in just about the same shape as ever before -- ham radio is okay.
I see no correlation between the tests that people took and their conduct on
the air, at least not by looking at the FCC enforcement logs.

"Kids today! Why can't they be like we were -- perfect in every way!"

Please pay attention. If I was running an emergency traffic net and someone tried to break the
net on slow speed CW, I would ask him what emergency traffic he had for the net, not how far
away he was (How did you determine how far away he was? QRZ license data base?
recognize him from his callsign? How do you know he wasn't mobile or visiting in the disaster
area and really has emergency traffic? You omniscient or something?) If he had emergency
traffic, I would attempt to prioritize it in relation to the other emergency traffic on the net,
and get him together with whomever he needed to pass the traffic to, and move them off to a
discrete frequency away from the net frequency to get it passed.

You'll have a problem beating me at my own game. I did this sort of thing professionally for 20
years. Not to mention having had considerable experience on ham nets.

I can see where you might do just that, with your attitude. I would quickly find what his business was, and if he's just "checking in" he'd get cut off shortly. But you can not determine what his situation is just by his slow CW speed. YOU are the fellow who says hams don't need CW at all, so how is it that you advocate mistreating slow operators?

Ah. So you're saying that radio still doesn't allow "good encryption"
Enigma didn't happen. (I know, it wasn't as good as current digital
types, but it was good).

> > at all.
> >

Whether or not FCC monitors is really not the point, the point being that is
why
the regulation was made initially. Rules that do not allow encryption will be
mostly
followed by those who follow rules, which is most hams. Any encrypted radio
traffic
is thus illegal. So anyone so doing will be subject to FCC interest. With the
increased
national security drive, and the added scrutiny of communications including
monitoring of the internet, it makes sense to look at amateur radio frequencies
as potential trouble spots.
As noted earlier, many non citizens hold US ham licenses. No one knows if any
terrorists do or not, just as no one knew why they were studying flying in the
US. I doubt all this if being overlooked.

The point in this scenario is that net control would have no way of knowing what the situation was, whether the slow operator was a lid getting in the way or if he actually had emergency traffic to handle, until he acknowledged him and asked what his business was.
Any net that refuses to handle slow operators calling in while working an emergency is acting very inappropriately.

>> Why do you think that regulation was formed in the first place?
>
>Maybe Jim N2EY has a historical answer for us.

The regulation about "codes and ciphers" is meant to forbid
any form of encryption that hides the true meaning of a message.
Look at the entire rule and its meaning should be clear.

Note that the rule actually forbids concealing the meaning of radio
messages transmitted by amateurs, by any means, not just encryption.
For example, the message "Should everyone leave long envelopes? Not
required or necessary." looks innocent enough until you look at just the first
letter of each word.

These regulations originated early in the history of radio, and were driven by
experiences with the hiding secret messages in telegrams, and the covert use
of radio such as the Telefunken station in the USA during the early part of
WW1.

Does any of this stop the bad guys from encrypting stuff and hiding messages?
Probably not, but it gives the govt. something to prosecute with.

The FCC does monitor hams to some extent, and is required by law to be able to
monitor any amateur transmission.

>would consider expert.

I really don't think so.

>Does a figure skater qualify as
>an expert because s/he can't skate like a hocky player (or vise versa)?

I think you meant to write "not qualify".

That's not a valid analogy. A figure skater and a hockey player do different
kinds of skating, just as hams and broadcast DJs do different kinds of radio.
Saying a figure skater is an expert means that s/he can do all sorts of
figure skating moves with a high degree of skill. Saying a hockey player is
an expert means he/she can play the game well, with a high degree of skill
in all areas of ice hockey.

Would you call a figure skater an expert figure skater if s/he could not do a
toe loop
or a double axel? I wouldn't.

That's not what I'm saying. I don't call myself an expert because I know hams
whose
skills are far above mine.

Even though QST did bestow the title "definitive expert" on me.....;-)

One does not "jump in" to a CW net unless one has an emergency. Those
who wish to join the net wait for the NCS to ask for QNI,then join the
net in standard fashion.

>If you were net control, what would you tell him?

"R TU AS"

and go right back to net business.

--

One of the many wonderful aspects of CW traffic handling "done right"
is the
extremely high efficiency and economy of words used. Not a dit wasted.

You oughta try it sometime, Cecil.

Well, maybe, what little of it there is. There wasn't a single VE question,
and as I recall, there were about twice as many questions. Serious technical
stuff. Today, mostly fluff.

Wrong. FCC decided to drop all licensing requirements for broadcast engineering and leave all the responsibility for meeting the technical rules to the station owner. The only services where operator licensing is required is where it is required "by international treaty".

The implications of such a move should be obvious.

> >

That would be because you have dealt with stations that *have* a technical staff. That is no longer required by FCC regulation. The owner is free to do that work himself if he dares, or hire whomever he wants to do it. No qualification is necessary. A bright teenage disc jockey can be pressed into service if it can be made to work out. Some owners are astute about doing it right, and some, of course and as always, cut as many monetary corners as they can get by with. Most "have to" broadcast engineering these days is done by contracted consultants who often travel long distances to do it.

>
> Dick, can you describe for us the instances of proper equipment maintenance not
> being done at broadcast stations?

Wouldn't you agree that transmitter tuning and modulation adjustments should be done by someone who has an understanding of the issues and pitfalls involved? When a FCC licensed person was required, he knew that if he didn't follow the rules he could easily lose his license to work, and he would see that technical problems were taken care of.
Most wouldn't allow a deficient transmitter to go on the air, and insisted that problems which the owner might consider minor, but which left the station outside the rules, be corrected.
I have no doubt this was a part of the reason broadcasters worked to get the rules requiring licensed operators dropped.
With that requirement gone, and owners now can go as far as they dare in ignoring things they can get by with ignoring, and there are many. FCC visits to outlying stations are rare.

But as Jim Bromley correctly pointed out some time back in a private email, much less maintenance is required by new generation solid state transmitting gear. Of course that only resolves SOME of the problems.

All this is not a problem the FCC can't ignore. I'm sure they occasionally find, in a surprise inspection, a station so far out of tolerance they get to issue a

NAL. But generally it works out, and as with much of ham radio, they find it to be a situation they can live with, if only grudgingly. But I've heard some real cruddy sounding radio stations, too. Sometimes it's deliberately done, and sometimes it's the result of poor or nonexistent engineering..

I was once called by the owner of a 100kwERP FM small market station who couldn't get it to turn on. His regular "last resort emergency call" person was out of town and had given him my name to call if he had to have some technical help. Though I had never seen this transmitter before, I quickly determined that a thermal time delay relay was not closing, and confirmed this with a wire jumper. I asked the owner if he had a spare relay (it was a plug-in unit). He said, "Oh, I already replaced that with a new, that's not the problem".
I asked him if he had another spare. He did, I plugged it in, and the transmitter came on properly. He was amazed that a new relay could be defective. And all he lost this day was a few hours of expensive air time.
This fellow had learned a lot about keeping his transmitter on the air, and this was just another lesson. You can be sure that he made other miscues along the way, some probably more serious. It's almost inevitable. But he saved a lot of engineering expense, and didn't fry himself, so he's a success, to be sure..

Now, I'm quite sure you will downplay this just as you do all the "problems" in ham radio, after all, "that's the way it is", and all is well with the world. And, things do change over time.
When I last did broadcast engineering, solid state transmitters were not yet in widespread use.
If their use changed broadcasting as much as they have changed ham radio operations in areas such as thermal stability and reliability, there will be considerable differences. But there still remains antenna systems, and not that much seems to change in that area.

The striking feature seems to be the drastic change in rules that is involved. One day complete engineering responsibility is placed on a licensed person, next day poof! it's all gone, and it all is dumped onto the station owner, where no trust whatever had been invested the day before.
Bureaucracy at its finest.

This is, for some strange reason, basically a silly forum.

1168. Ending Code Requirement at International Level

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-12 15:41:30 UTC
From: Valentine Germann <vgermann@socket.net>
Message-ID: <u8s7ca8muuhu93@corp.supernews.com>
Source record: 37206

Hello, all!

I am an old guy (52) who will be taking his Technician
test next Monday and then, with any luck at all, the
General tests, code and written, in April. My primary
interest in Ham Radio was the possibilty of making
international contacts with low or medium power, on
CW, since that is the "international language" of amateur
radio. However, if the ITU goes ahead and does away
with any CW requirement, what does the future hold
for an international community in Ham Radio? It seems
to me that if the CW treaty committments are abandoned
it is only a matter of time before CW itself will be aban-
doned, as well, as the numbers of Hams using it declines
to the point where the band plans are changed in its disfavor,
finishing the job that the treaty changes had begun.

No big deal, I guess, except in my case I had hoped that
this "international" aspect of the avocation would rermain
very, very important into the far future. If the CW treaty
requirements are removed won't amateur radio become
more or less balkanized by language groups? I know
this possibility is "down the road" but it is still, to me,
a very disturbing prospect.

Val Germann
Columbia, Missouri

This is a very real likelyhood, Val.

We can argue the "CW get's thru" arguement all day long...It IS true in MOST cases, but it's one other truly bonafide application IS international communications and for exactly the reason you cited.

I've had the darndest times getting a guys name and location before, struggling through heavy European or Balkan accents, but I have never had such a problem in CW.

The lack of requirement to know CW, and hence an exposure to it, will, in the long run, be it's demise. The human creature is one of "path of least resistence" and this will be no different. With the exception of a few "artisitc" hold-outs, Morse Code use will eventually die out.

And that will be a shame.

He was obviously not a Morse expert.

My statement is still true: Lack of proper planning and preparation,
or somebody with an ant-CW/Morse agenda.

It's poor planning/preparation not to have a straight key available.
Particularly in a setup such as the one you describe, where cost,
space and portability were not serious considerations.

It's also poor planning/preparation not to learn to use the equipment
which

did exist - including the paddles.

That is pretty well the way I view the situation also, except for a couple of caveats.

For one, we can't automatically assume that all nations will automatically drop the CW test
just because ITU and USA does. I understand that Russia has already stated it will keep the CW test. There will surely be others. No rules changes take place quickly.
Also, none of this CW loss will occur in the near future. CW is very much alive and well on the air these days. So Val, you won't need to be concerned with a lack of other hams to chat with on CW, either locally or internationally, any time soon. Steve and you are surely right about the situation down the road, however.

Secondly, there are plenty of overseas hams who use digital modes who are very versed
in the English language who populate the bands, so the international aspect of ham radio is pretty well preserved. Many others are very conversant in spoken English and work the phone bands.
So go ahead and begin your ham radio experience, it isn't likely you'll find it disappointing.

That's great as far as the LID is concerned, but does nothing whatever to assist a slow CW operator who has emergency traffic that needs to be handled.

This is really novel. Just because he is a slow operator calling in on a fast emergency net,
you'd cut him off without ever checking to see what his business was, or where he was calling from. Your boundary condition that "he is 200 miles away from the emergency" is a non-starter since you did not state how you come by that information. If you don't know, you can't assume in an emergency.

Ah, yes, it's another vanilla "just a choice". Choose the possibility of having no communications rather than learn the most basic mode of radio communication, radiotelegraphy.

Got it Val? Cecil says because hams have always been required to pass a
code test
they are slaves. Isn't he something special?

From that you indicate that you believe that future hams will leap to learn Morse code whereas all the NCI types have dedicated their lives to its very demise. To call you a dreamer would be gross disservice to dreamers.

Yes, he was/is - 300+ countries DXCC on CW. He just wanted us ordinary humans
to be as expert as he.

> My statement is still true: Lack of proper planning and preparation,
> or somebody with an anti-CW/Morse agenda.

He was/is an Extra, extremely pro-code, and in charge of iEARS. But I sneaked
my straight key into the Intel ham shack for ordinary QSO's.

> It's also poor planning/preparation not to learn to use the equipment
> which did exist - including the paddles.

I have practiced for hundreds of hours - still can't get the hang
of the paddles. My inherited palsy 'dit's when it should 'dah'.
The other night, a ham just stopped responding to me because I
had so much trouble with his callsign using the paddles.

The subject (see above) is a 5wpm operator, 200 miles away from the emergency
zone, who wants to be part of the emergency CW net.

It is a hypothetical case, Dick. I chose and published the initial boundary conditions. You can assume that he has already given his QTH as being 200 miles away from the emergency yet still wants to be in on the emergency action. I know such individuals.

> > Anyone interfering with emergency communications needs to be mistreated.
>
> So how about we determine that he is indeed just interfering before we cut him off from

>count, count, count and play with people better than you both

>to learn something and because they can be trusted not to do
>something stupid and insert a random event into things.

This is no doubt related to an idea floated here by Mr. Hare, that the erstwhile non-qualifiers will step up to the plate once they get into the tent and fall under the influence of current Hams. Could be.

>Now how do you set up an exam system to weed out those who
>are not about to lose face and ego in the process of aquiring the
>brown stains [of hard experience through trial and error]???

Well, that's a tall order. However, the exams have a public policy purpose and component that is denied at Ham Radio's peril. If too many of those "pissing in" are actually PISSING, well, before long you don't have anything anymore . . . but a lake of urine.

Val

Nobody has leaped (jumped off a cliff) to learn Morse code since I have been
a ham, Dick. Like it has been in the 51 years since I first obtained a ham
license, the hams who want to operate CW will operate CW. The hams who don't
want to operate CW will not operate CW. The General ham who gave me my Conditional
exam in 1952 couldn't copy Morse code as fast as I could send it. I had
to slow down for him.

Oh, NOW it's all clear! You're actually a big FAN of the mode, perhaps in the same way Anderson, as the auditor of Enron, published honest information of use to the rank-and-file stockholder! Thanks for clearing that up!

And since it's up to "us" (and that includes YOU!), perhaps you might expound on your program to promote the benefits of CW in amateur radio? You do have, one, right?

Source record: 37054

If you are in the market for a screwdriver mobile antenna, then I invite your attention to the
Carolina Cyclone shown on my website below. The difference in the Carolina Cyclone and
some of the others is in materials, workmanship, and price. Often, increases in signal strength
are achieved by increasing the size of the inductor, wire size, and spacing. This is what I have done with the Carolina Cyclone. Cyclone I, for example, is 2 1/2" dia compared to
only 2" for the DK3 clones and uses #14 wire spaced at 8 turns per inch for a better form
factor. Materials are black Nylon, the same materials used for Nyloc bolts, to handle high
power, and give rugged service for years and years. The result is 800 watts power handling
power (conservative) for Cyclone I and a full 1500 watts SSB for the Cyclone II, which is
a full 3" diameter to give the same "Q" as the famous Texas Bugcatchers. You will find that
you will be most successful with DX and pileups with the Carolina Cyclone series of antennas. AND the prices are well under those of most of the competition. For more details, please visit www.qsl.net/k4kwh .

Yep, CW has always been my favorite mode. The only reason I got a Conditional license was to be able to continue 40m CW after my Novice license expired in 1952. Last Sunday was the first time I had been on SSB in a year - needed to get my SGC-500 amp working with my new IC-756pro.

> And since it's up to "us" (and that includes YOU!), perhaps
> you might expound on your program to promote the benefits

Yep, I promote CW usage in my home county ARC and encourage all other hams to do the same. I offer to teach classes in Morse code to anyone who is interested. I encourage all my GED students to try amateur radio as a hobby.

I have strongly suspected, bolstered by your own admittances here, that you
probably were
one of the persons who were given a pass to your Conditional ticket by your buddies
who tested you. So you, and others, went on to bigger and better things. Many did
not, and some are the persons noted. That you would much rather it wasn't so is not
at issue.

Shannon's law cannot account for the fact that a well trained human can copy CW well below what machines are able to do, save the wildly different extremely slow HF moonbounce style CW, which is vastly different and you know it. Did Shannon know that
there was something there that was different? Too bad we can't ask him.
You had no valid rebuttal to my report of hearing several Europeans working PSK31 in very weaksignal conditions were the PSK mode was not copyable, yet the CW ID was clear. You came back with some lame remark about "a level playing field" which had no relevance whatever to the communications situation at hand.
Yes, by now the whole world knows about Shannon and his magic theory. So what? If a "more efficient mode" won't get through and a lesser one will, practical people will view the theory as unrelated to the practice.

"In theory, theory and practice are the same, but in practice they are different"

In the realm of ham radio testing, what could be more factual? Of course what I DID NOT say was that I stopped learning in 1969 right after I passed the Extra exam. It would have been difficult to accomplish what I did at work in the next 20 years if I had.
Of course you conveniently overlooked the context, as always when you're attempting to trounce an opponent. Nice guy, that Cecil. Lame, too.

> On your theory about SWR:
>
> > Which means that the incident wave is equal to the
> > reflected wave, a Standing Wave Ratio of 1:1.

Yep. And of course I knew that was incorrect, and didn't proof it before sending. The actual case is nearer the opposite, and if you don't believe I knew that, it's your problem, not mine. I don't have any problems making my antennas work. Nor did I have *at* work. Again, a trolling opportunity grabbed by you

> "Thanks For The Memories", Dick.

And you're more than just welcome, OT (that's Old Troll). Thanks for seeing to it that your context-busting trolling is never stale. Mistakes? Yeah, I make them. And I could go back
to the archives and glean out some of yours, too --they are there-- and YOU have no excuse, being a degreed engineer. But I don't intend to waste the time. It's a Pity you don't have anything more constructive to do with yours.

One of the merits of code is that it requires a minimum of equipment to
operate with it. So there should be a lot of CW from the third world, yes?

Fantastic!

>Yep, I promote CW usage in my home county ARC . . .

I'm reading . . .

> . . . and encourage all other hams to do the same.

How do you "encourage ALL other hams to do the same?"
I haven't seen a messge like that from you on this NewsGroup.
Perhaps I have missed something, or perhaps that
encouragement is not considered important in this venue!

>I offer to teach classes in Morse code to anyone who
>is interested.

OUTSTANDING, though I must admit there is a slight waver
in that "to anyone who is interested" bit. That is, I would have
expected you to ENCOURAGE people to learn CW, perhaps
even in the face of a, er, dare I say it, certain lack of interest?

>I encourage all my GED students to try amateur radio
>as a hobby.

And then learn CW from you (?), after you have strongly
encouraged them to use your "favorite method?"

That certainly WOULD be fine!

Now, in the public policy realm, that is, rulemaking, what
do you recommend with reference to your "favorite mode?"

Val

So you are depending upon CW to provide you with food and water in case
of an emergency? Remember, "The Morse God giveth and the Morse God taketh
away." Or was that the Norse God - I forget.

Could be, Dick. W5OLV is an SK so we have no way of knowing. He might have
fudged my test results (or he might not have). He certainly didn't fudge
the perfect score on my Extra exam so everything turned out OK after all.

> Shannon's law cannot account for the fact that a well trained human can copy CW
> well below what machines are able to do, ...

Of course, Shannon's law accounts for that, Dick. Don't be such a silly goose.
CW *cannot* perform past Shannon's limit.

> Yup. Your right, a Latin maven I am definitely not, and never professed to be.
> Your tail was being twisted but you didn't notice.

I lost my tail a few million years ago, Dick. Too bad about your species.

> In the realm of ham radio testing, what could be more factual?

Oh Yeah, I forgot that you believe that ham radio is unrelated to anything else
on this planet - that ham radio obeys a completely different set of laws of
physics than any other kind of radio.

> It's a Pity you don't have anything more constructive to do with yours. (time)

That's one of the few things upon which we agree. Come take care of my
parents so I can go to CA and have some fun.

If you have been reading this newsgroup for a year, there
is definitely something wrong with your reading ability.
Approximately once a month, I have encouraged all hams to try CW.
I think Bill and Ed will vouch for that. I am a member of The
International Morse Preservation Society. I am not a member of
NoCode International.

> Now, in the public policy realm, that is, rulemaking, what
> do you recommend with reference to your "favorite mode?"

If I were to base my beliefs upon my feelings, I would say
"Continue the Morse code testing, ad infinitum!" However, I
base my beliefs upon my rational thoughts as a Libertarian
and, for that reason, I must adopt a "live and let live"
attitude based on freedom of choice of modes in a hobby
in a free society. IMO, no rational freedom loving person
could come to any other conclusion.

Clairvoyance had nothing to do with it and knowledge had everything
to do with it. Thanks to my mother, I was already relatively fluent
in English, science, and math by the time I started school. The teacher
caught me daydreaming one day in the first grade and asked me a question.
The sound of my name snapped me back to reality and I asked her to repeat
the question. She said, "Aha, you weren't listening, were you? Why is the
South Pole colder than the North Pole?" I don't think that was the original
question but I answered, "Because there's land at the South Pole." Her jaw
dropped to the floor. She later told my mother about it and my mother said,
"Doesn't everyone know that?"

Should be, but it seems that there very little ham radio of any sort in the third world, where a large portion of the people are nearly or completely illiterate and are living subsistence lives.
The few hams usually are the more moneyed elite who can more afford whatever they want.
If ham radio ever makes inroads into the general populations CW might well be popular, unless gear with more advanced modes becomes inexpensive.

Yes, but in PRACTICE..... the CW ID on a PSK31 signal makes it through under conditions where the the phase shift keying cannot. (Yes I know about the theory... sorry it doesn't work out in practice).
To force one to close down the bandpass on a working mode to the point where it, too, no longer works just to prove it is "more efficient" is simply irrational. Even it is good engineering.

>
> Oh Yeah, I forgot that you believe that ham radio is unrelated to anything else
> on this planet - that ham radio obeys a completely different set of laws of
> physics than any other kind of radio.

The scenario above explains that in detail and is indeed one example of where pure engineering doesn't always hold up to the reality of practice, even if it is correct..

Remember our buddy Yogi---" In theory, theory and practice are the same, but in practice they are different" (at least they can easily be). Truer words were never spoken.

Bingo....it is a personal decision. Does you car have a first aid kit?
Are you able to give CPR? Those too are personal choices. If
I decide NOT to learn CPR am I gulty of having no heart attack
emergency response rather than learn the most basic mode of response
(i.e. CPR)?

Cheers,

>slow CW operator who has emergency traffic that needs to be handled.

If it truly were an emergency, both the slow op and the net control station could switch to SSB or a digital mode right on the CW net frequency.

If conditions were so poor that SSB was not an option, I doubt that an unskilled CW op would have the ability to dig the encoding out of the noise.

What is your estimate of the percentage of hams that could pass emergency CW traffic under circumstances where conditions were bad enough that SSB could not be copied?

I can't speak for Cecil, but I feel that I promote the mode by having about 95% of my ham radio operating in Morse code. I have been part of some of the discussions on the QRP lists about why we need to work with the new hams who would like to improve their CW skills.

And, of course, I counter the disinformation offered by other OFs that CW does not have enough merit to be worth learning except to pass a test. :-)

I don't think that it is helpful to those who might be interested in ham radio to try to show them the parts of ham radio that the are not interested in. There are a lot of things to enjoy in ham radio and I don't feel diminished in any way by the presence of people who enjoy different things. As an Elmer, I see my role as helping someone discover what part of ham radio is right for them, not to impose my standards on them. As I tell them about different parts of ham radio, my enthusiasm for Morse code will show through.

Those that are not worried more about other facets of life. Even in developing nations, the poorest segment of society does not usually pursue ham radio.

Of course, your point is well taken that the inexpensive nature of the CW rigs can be quite appealing to hams. Hams are, after all, known to be frugal. :-)

The QRP column on the ARRL Web page just featured a nice article about QRP rigs, most of which are CW.

The implications are not obvious to me, Dick. In my dealings with broadcasters, I have generally found their technical staff to be competent. I don't see any significant change in the quality of the audio and video from local broadcast stations. I don't see a spate of FCC NALs to the broadcast industry.

What are the effects of such a move? I may be just not seeing them, so anything specific would be helpful.

Ah, yes, a useful answer, unlike the one from Mr. CAM.
So, most of the CW, worldwide, is from "First-World" outfits,
such as Western Europe, Japan, and a few other locales,
like maybe a few large cities in Latin American and the
Middle East, and maybe Bahrain or some such? Is that fair?

W1RFI wrote, strangely, concerning the promotion of
CW in the amateur service:

>I don't think that it is helpful to those who might be interested
>in ham radio to try to show them the parts of ham radio that
>the are not interested in.

Now, folks, I ask you to study this convoluted sentence from
this obviously seriously conflicted poster. He says he's FOR
the use of CW on the amateur bands but he writes material
such as the example you see above. There's something
seriously Freudian going on HERE, without ANY doubt!
That is, he really and truly feels that people who know nothing
about Ham Radio are not really interested in CW and so,
since that is a part of Ham Radio that they're not interested
in, even though they don't yet KNOW anthing about Ham
Radio, he's not going to show them that part of Ham Radio.
Do you have it now? I think I do. And, I now know why this
poster generally restricts himself to only two lines.

>There are a lot of things to enjoy in ham radio and I don't feel
>diminished in ny way by the presence of people who enjoy
>different things.

Show me the relevance, in the current discussion, for THIS
statement! With friends such as this, truly, does CW need any
enemies at all? I wonder.

>As an Elmer, I see my role as helping someone discover what
>part of ham radio is right for them, not to impose my standards
>on them. As I tell them about different parts of ham radio, my
>enthusiasm for Morse code will show through.

Yeah, of THAT how can I have ANY doubt! :-)

Val

HAW, that's a good one!

Quick survey of code test speds in the USA for a ham license:

1912-1917: 5 wpm
1919-1936: 10 wpm for all classes of license except 20 wpm for short-lived
"Amateur Extra" license in the early 1920s.
1936-1951: 13 wpm for all classes of license
1951-2000: 5 wpm for Novice and Technician, 13 wpm for General and
Advanced, 20 wpm for Extra
2000-present: 5 wpm for all classes of license.

Notes:

1) From 1990 to 2000 it was possible to get a "medical waiver" of the 13 and
20 wpm code tests by submitting a note from a medical doctor.
2) Amateur radio was completely shut down during WW1 and all existing
licenses expired. During WW2 all existing amateur station licenses were
suspended but it was possible to get a new amateur operator license and
renew/modify an existing amateur operator license.
3) For speed purposes, a "word" consists of 5 characters. Numbers and letters
count as a single character but punctuation marks and prosigns count as
two characters. 5 wpm = 25 characters/minute, 10 wpm = 50 characters/min,
13 wpm = 65 characters/min, 20 wpm = 100 characters/min
4) During the development of the "incentive licensing" changes of 1968-69, the
FCC proposed adding a 16 wpm code test for a new license class that would
have replaced the Advanced. This idea was never implemented.

--

True story from Civil War era land-wire telegraphy days:

During a particularly hard times a railroad advertised to fill an operator's
job.
Superintendent's office was full of applicants waiting for interviews. The
office

was a busy place, with RR employees rushing about doing their jobs and a telegraph sounder going at a furious pace practically non-stop.

The applicants waited patiently to be called, but none were. A young man arrived,
started to look for a seat, then stopped, walked to the Superintendent's office door
and entered without even knocking. A few minutes later the young man returned to the waiting area with the Superintendent, who announced that the position had
been filled.

There were angry protests from the waiting multitude who had not even had a chance to plead their cases. The Superintendent then pointed out that the sounder had been tapping out the same message over and over: "If you can read this, come into my office for an interview".

>

That's not really a complete picture in that some countries such as Russia have long encouraged ham radio and Morse code operation, and many Russian hams are among the best CW ops anywhere. Same for the Baltic and eastern European regions. There has always been a fair amount of CW from the Aussies and New Zealand, and considerable from central and South America. There are always Japanese CW ops on the DX bands.
The last CW contact I made a month ago was with a station in Scotland .(I've been busy working the digital modes while being berated as a retro Luddite for supporting some level of code testing for hams).
If you're interested, check the website <http:\\www.fists.org> which is FISTS, the Society for the Preservation of Morse Code and is worldwide, and has somewhere approaching 10,000 members. (FIST is the acronym for an operators sending style "his fist", and is a term that has long been in use). They have FISTS frequencies on each CW band where members meet and chat on CW, which may be of interest to you as a prospective CW op since it's a very good place to build your own skills. Slow speed ops are encouraged to participate for just that reason. (the frequencies are .058 up from the bottom of the "regular" HF bands, ie 7058 khz on 40 meters and 14058 khz on 20, to name two of the more popular. FISTS motto is "Accuracy transcends speed". You are welcome to join at any time, the only requirement is that you support the preservation of the Morse code. Details are on the website.

At this moment CW is far from history, but some of us truly believe that the end of all code testing will inevitably change that. It has

long been axiomatic that virtually all hams became exposed to the Morse code via the testing process, and few would have learned it to any realistic skill level if not for requirement of the test. That is now even more true than ever, since the military and maritime services do not train or use Morse operators to any extent. (there are a few Morse operators trained for special military ops). In earlier days many former military and maritime CW operators also were, or became, hams. Those sources are gone.
Some code opponents regard code tests as a "hazing ritual", to be avoided at all costs, as though it would contaminate them with some terminal disease instead of offering them a lifelong skill on which they can rely and which offers so much enjoyment to so many. They are, IMO, to be pitied, but also regarded warily. A few of them are indeed a half bubble off plumb. It shows in their rabidity when railing against code testing. Reasoned arguments are just that, but some of the rhetoric goes a bit beyond.

How can you say what his skills are? There are people who can copy faster than they can send, though normally the other case is so. What if he had received an injury in the disaster that caused him to send slow? How can you possibly know what his situation is if you don't even acknowledge his call for help merely because he is sending slowly?

You're right, same principle applies. If you refuse to learn to operate CW, you don't deserve to have your butt saved by someone who did. Just as you don't deserve to have some one do CPR on you if you refuse to learn it to help others.

Good analogy. Choose your own poison.

Gee, Ed. How is net control going to know the slow CW station's capabilities
without communicating with him in the mode which he is using?

>
> If conditions were so poor that SSB was not an option, I doubt that an
> unskilled CW op would have the ability to dig the encoding out of the noise.
>

Actually this scenario happens to voice SSB nets just as often or even more so. It
isn't that unusual for a CW station to check into a SSB net. And it happens in
times of extreme distress that people learn suddenly that they had skills they
weren't aware of. But if the code test goes so does "Basic Training" for hams.

> What is your estimate of the percentage of hams that could pass emergency CW
> traffic under circumstances where conditions were bad enough that SSB could not
> be copied?

I see no reason to guess, do you? Why not just keep a learning level test so that
there will always be a modicum of CW skill within the ARS? I know, that's asking
far too much.

Good anology...poor response from you. Since just about anyone
can learn CPR, you are saying the millions of people that have
not learned CPR don't deserve to be saved by someone that did.
Pretty sick attitude on your part.

No cheers,
Bill K2UNK

At any point in time, how does the FCC know if a digital signal
is "illegal". If Ed Hare and I "publish" a new coding scheme in QST,
does the FCC suddenly "plug it in" to FCC monitoring stations?

> With the increased

That's Andersen, old fella. Ends with "E...N" not "O...N."

That company's name begins with "A" just as the ARRL begins
with an "A." That the rest of the names aren't the same doesn't
mean that they are alike...although both the auditing and
consultation done by the Arthur Andersen company seem to
have been acting strangely akin on certain tasks within their
respective activities..

>Whew, only "some" now. You had me worried for a bit. "Some" think that ARRL
>has Ed Hare be their secret propaganda outlet on rec.radio.amateur.policy,
too. I
>can live with it just fine, thanks.

I have no idea how many the "some" are outside of rrap...there is no
way to determine that quantitatively...for either myself of Ed Hare.

Try to stay with the "important" RFI work and stop the ARRL
apolgistic propaganda here. You are not doing it well by quoting

standard ARRL phraseology.

>>Is it a "ridiculous conclusion" based on over 2600 individual Comments
>>exclusive of the ARRL's on 98-143?
>
>That is great, Len. I am glad that each and every ham with a view sent that
>view to the FCC. QST and every other ARRL outlet asked hams to do just that.

Did they ask "everyone" with an interest? I don't think so...despite
the allegations four years ago that the League was implied to do
just that. That was dismissed as the "usual ARRL propaganda"
then and never proved conclusively.

>>Again, no "loss." If "all it took was a letter," why does the ARRL
>>have a legal firm representing them in DC?
>
>To write the letter, Len. Duh!

Are there no secretaries at ARRL Hq that can write in the
proper format?

Does the ARRL have a legal firm on retainer in the DC area?
Please answer yes or no.

If "all it takes to write a letter" is the ability to compose a
literate letter in approximately the standard format, why is the
ARRL paying a legal firm in DC out of membership monies?

>>Why does the ARRL insist on being a "middleman" in "how to file
>>comments?" The FCC explains the procedures directly on its
>>website.
>
>Um, the same website that ARRL links to in the part of ITS website that tells
>hams how to file comments? You are seeing the Devil behind every bush!

Not at all. I am trying to get a straight answer. I haven't gotten a
straight answer yet. Why is that so hard to answer?

>>Question repeat #1: Why does the ARRL keep a legal firm in DC
>>if "all it takes is a letter?" Can't the ARRL Hq staff compose a
>>"letter?"
>
>Sure, I compose them all the time, but not for FCC filings. Chris composes
>them better and he knows the law. We have a deal; he doesn't tell hams how
>to fix RFI problems and I don't tell him how to represent ARRL with the FCC.

Comment on NPRM 98-143 did not require either expertise on RFI
matters or expertise in "legal wording."

You haven't answered my question at all.

>>Question repeat #2: Why does the ARRL have it OWN "FCC rule
>>book" when the FCC has its own rule book available free for
>>download and explains the procedure and format for Comments?

>
>Because hams want to buy it. Those that do apparently prefer the plain
>language explanations to the rules.

Are you saying that "hams" cannot comprehend the wording in
Part 97, Title 47 CFR? From your alleged "answer" above, that
shines through.

Part 97 is one of the smallest, if not the smallest of all Parts in
Title 47, Code of Federal Regulations. All the definitions are
given, all the regulations are written in English. All of the Parts
in Title 47 can be downloaded free of charge from the US
Government Printing Office site on the Internet; it had been
available on the FCC site (may still be) as were several other
Parts.

The alleged "plain language" translation done by the ARRL seems
more to be little more than a re-write of the freely-available
regulations direct from the FCC. I will admit that a color-coded
"ham band" chart made by the ARRL has much more cosmetic
appeal than the plain black-and-white in the government document
but the ARRL "version" seems incomplete and is NO substitute for
the codified regulations.

Are you saying that "hams" cannot set their VCR timers either?
Or able to read their ready-built radio equipment operating
instructions?

I give them far more credit and intellectual capability than you do,
Ed Hare. Of course, only a tiny practically-miniscule number of
"hams" are reading rrap. You must be insulting them, not the
"ARS Community."

>Well, there you go. You did, after all, chastize me for asking questions,
>now, di'n't'cha?

Why did you ask that?

>I think that most members would feel that it is "not possible" that ARRL
>exerts some sort of mind control over them, Len.

True Believers cannot see or comprehend that they've been had by
88 years of self-promotional propaganda or their overwhelmingly
major source of news about amateur radio coming from a single
organization.

>>What is almost always overlooked is that a large organization MUST
>>try to influence others that it is the "best" organization.
>
>Big difference between "opinion" and "influence" and "control," Len. Talk
>about misdirection!

There's absolutely NO "misdirection" in what I said. It is simply
propaganda designed to convince others that an organization is

the "best." Standard marketing technique all over the world in every field of activity requiring monetary input for survival.

If a "competitor" gains a monopolistic position in influencing others, and does it for a long period (88 years is safely defined as a "long period") then they are using the "Big Lie" technique. That is a very definite CONTROL condition. Denial does not make that go away, no matter how hard you try.

The membership of the ARRL is still less than a quarter of all licensed US radio amateurs.

>My conclusion that your statement was pretty far out was related to the
thought
>that spies and terrorists will develop new digital encoding methods and use
ham
>radio to communicate covert messages if the FCC allows hams to develop new
>digital encoding methods ans use ham radio for its intended purpose.

KGB Colonel Rudolf Abel used amateur radio equipment as part of his
"cover" or disguise ("it was his hobby") as an espionage agent for the
USSR. That "ham radio equipment" was actually a method for
communications with the USSR during the late 1950s. He was
arrested in 1957. Several items of that KGB field agent's paraphenalia
are on a CIA "tour" display that is at the Ronald Reagan Presidential
Library in Simi Valley, CA, until mid-July. [my wife and I looked in on
it this Tuesday morning, most interesting display]

It did not escape newspaper reporters' scrutiny that "amateur radio
equipment" was "part of a spy's toolbox" and so reported on some
stories of that time. Considering that Dick Carroll was perhaps
young and impressionable in 1957, he might have been influenced
by those lurid stories. They would appeal to someone being
schooled in television broadcasting techniques, I am sure.

>Fortunately, you are wrong, because the rules do permit hams to develop and
>use new encoding methods.

That is an arguable subject. The US amateur regulations do not allow a free reign on all possible modes. Only relatively recently were the pseudo-random sequence coding hardware on DSSS spreading codes freed-up somewhat by a regulation change. US regulations still maintain a very long records-keeping requirement for unspecific (non-standard) modes.

PSK31 was NOT developed or even first tried in the USA. That was done in the UK by Peter Martinez, G3PLX. Trials and wring-out of the system were done in the UK and Europe.

What has the ARRL promoted for a new, original mode in the last quarter century?

concerned. Perhaps that is "too much pride."

>> Did that "accident" happen while on duty in the air force in a
>> communications squadron?
>
>You writing a book?

I've already contract-written two of them and am working on a
third. Why does Heil ask? I am a professional writer; i.e., I
accept pecuniary compensation for work performed.

There is NO pecuniary compensation for the message writing
in here, ergo all such writers are writing in an amateur mode,
not receiving money. An exception might be made in Ed Hare's
case since he is in the curious postion of being a "professional
amateur."

Is Heil implying that professional writters "cannot" write in here
because it is about amateur activities?

>> Perhaps it was "while doing work for NASA?"
>
>...leave this chapter out and make it a mystery.

There is NO "mystery." Heil never "worked" on anything
"for NASA."

>> >> Did that happen while defending the free world with morse as
>> >> the only ham in all of Guinea-Bissau?
>> >
>> >What does this one mean, Len?
>>
>> Oh, my, lil Davie is all a-twitter again.
>
>> What does lil Davie's question mean?
>

>It indicates that I don't know what you mean by your question.

Sigh. Let me explain in terms a child can understand.

Heil made the claim of "being the only ham in Guinea-Bisseau"
while with the US Department of State in that country.

Heil did not make any claims of paying his own way to that
terribly important country in middle Africa (population 1.2
million, chief export being cashew nuts) nor of working for
State without any compensation. He is therefore in the
professional category (unless verifiable claims otherwise
are submitted). "Pride" at being "the only ham in Guinea-
Bisseau" is misplaced or a rationalization of his taking
advantage of a situation where he was monetarily
compensated, his transport paid for and housing furnished
by the government.

Heil fell into the "professional amateur" communications
category.

>Who is lil Davy?

"Lil Davie" (use the correct quote) is Heil who was using
"Leonardo."

I shall go back to "The Dynamic Duo" of "Ratman and
Wobblin."

"The Thin Man" would never apply to either...

>Sure there are limits, Len. What do you have to do with amateur radio
>other than posting your lengthy diatribes in this venue?

Why does Heil insist on being a "judge" of who does what anywhere?

Why does Heil insist on defing all according to his personal
preferences?

>So you wouldn't feel obliged to take pot shots at the ARRL.

The ARRL is a political special-interest group. Any political
group is open to negative or positive criticsm. It's the
American Way.

Why does the Dynamic Duo insist on some specious "rule"
of No Criticsm for a political special-interest group?

>I know it has been pointed out to you before: This isn't a
>"professional" radio newsgroup. This is an amateur radio newsgroup.

This is specifically an amateur radio policy newsgroup.

Since when does amateur radio policy involve automobiles and
transmission operation thereof...or commercial radio operation...
or being a professional amateur in a small middle-Africa country

while on duty with the US government?

>So what'd the fun go out of, ham radio licenses or commercial licenses?
>It wasn't clear from your comment.

The feldwebel is trying to dodge his own order-issuing and pretending not to "understand" what is written. That's the "Nuremberg defense."

The ISSUE is, and has been in THIS NEWSGROUP designed to hold it, the retention or elimination of the code test for any amateur radio license. Self-styled "leaders" (Heil pretends to be one as well as judge-jury on radio "fun") insist on keeping the code test. Others argue for the elimination of the code test, entirely. The TEST, not the elimination of code use.

People like Heil seem to have "fun" in NOT ARGUING THE ISSUE but rather in displaying the usual sociopathic "superior" behavior against those not in agreement with his views.

Has Heil read and understood the definitions as they have been explained to him?

>...maybe rose gardening would be to your liking. "Good Old Mr. Wilson!"
>Is this the part where you claim to be a "happy old man"?

Heil is no Dennis the Menace, he is merely just another sociopath looking for an outlet for his personal frustrations. He should see a shrink, not a cartoonist.

Gruss Gott, Herr Obersturmbandsfuhrer.

Yep.The VERY LAST thing these "code supporters" would dare to do is to even gently nudge someone toward learning it. They will automatically do that on their own, should they have an epiphany that orients them in that direction. Right.

Actually, if you have been reading r.r.a.p for a year, you
will have seen an extensive discussion of firearms, concealed
and otherwise. Texas has reciprocal CHL agreements with at
least five other states.

Yep, "concealed handgun license - category semiautomatic".
In Texas, one cannot carry a semiautomatic unless one
qualifies for the license using a semiautomatic. So there
are people licensed to carry a .44 Magnum revolver who
cannot legally carry a .22 cal semiautomatic. Go figure.

> In any case, I'm out the door now. Pistol-packing

My ham radios are not afraid of burglars. :-) Did you
see the movie, "Miss Congeniality", where Sandra Bullock
tackles a guy whom she spots carrying a gun? Her admonition
was, "Silly girl, this is Texas - everyone carries a gun."

Yup - if one of those modes were available.

All depends on the conditions. How many dB advantage would you say CW has over SSB, given decent equipment for each mode?

Consider these simple facts:

Before April 15, 2000, going from General to Extra required taking two written tests, one of 50 questions (for the Advanced) and one of 40 questions (for the Extra). After that date, only a single 50 question test, based on the combined Q&A pools, was required.

You be the judge.

You are describing yourself, Dick. You have told everyone that there
won't be anyone learning code after the requirement is dropped. What
if you convince all the newcomers that is true? If you don't discourage
all newcomers from learning Morse code then you will be proven wrong.

Dick is the worst of all. He must discourage all newcomers from
learning Morse code in order to be proven correct in his assertion
that newcomers will not learn Morse code without the governmental
requirement. He has no other choice now except to discourage them.

Yes, so it would appear. And what a crew they are, these so-called
"code-supporters." One of them carries a concealed weapon, most
likely, and the other one knows what people are not interested in
before he knows what they ARE interested in. I think I've found out
what I wanted to know here, about these folks, in about 48 hours.

Tsk, tsk indeed! I never heard the term used by anyone in two years
while at Barksdale AFB. While I was not in a Communications Squadron
for the two following years in the Air Force, I never heard it used by
anyone during my year in Vietnam nor by anyone during my year in Texas.

You don't have to go that far. Just make it so that your questions have
something to do with what was actually posted.

>
> Heil made the claim of "being the only ham in Guinea-Bisseau"
> while with the US Department of State in that country.

...not in the post to which you responded. "Heil" not only claims to
have been the only ham *for most of his tour in Guinea-Bissau*, it is
known widely that "Heil" was there. It is known by radio amateurs and
by the State Dept. What of it?

> Heil did not make any claims of paying his own way to that
> terribly important country in middle Africa (population 1.2
> million, chief export being cashew nuts) nor of working for
> State without any compensation. He is therefore in the
> professional category (unless verifiable claims otherwise
> are submitted).

I think you've gone to great lengths to say that I went there to work.
Yeah, that's right. I was in the "professional" category for about
eight hours per day. The rest of the time I was simply doing what I
wanted to--you know, like other people who go to work. I'm not only not
required to submit verifiable claims to you, I'm not required to submit
any claims to you.

> "Pride" at being "the only ham in Guinea-
> Bisseau" is misplaced or a rationalization of his taking
> advantage of a situation where he was monetarily
> compensated, his transport paid for and housing furnished
> by the government.

I wonder if you have any idea of how Foreign Service members are assigned. Your comments make it sound as if you do not. I bid on the position in Guinea-Bissau. Did you ever "take advantage" of a situation where you were monetarily compensated? I suppose this translates, "You enjoyed benefits of life because you took a job somewhere".

> Heil fell into the "professional amateur" communications
> category.

The what? You pathetic old sap. That could apply to anyone who is a radio amateur and who holds a job.

> >Who is lil Davy?
>
> "Lil Davie" (use the correct quote) is Heil who was using
> "Leonardo."

You aren't being entirely forthright, are you? You've long used the diminuitive or have used your favorite German terms. Now you've reverted to the formal "Heil".

> I shall go back to "The Dynamic Duo" of "Ratman and
> Wobblin."

You aren't taking your pills as the doctor prescribed them.

> "The Thin Man" would never apply to either...

...or maybe you've taken a mitt full.

> >Sure there are limits, Len. What do you have to do with amateur radio
> >other than posting your lengthy diatribes in this venue?
>
> Why does Heil insist on being a "judge" of who does what anywhere?

Allow me to turn your own device on you: Why are you answering questions with a question? Aside from your multitude of postings here, what have you to do with amateur radio?

> Why does Heil insist on defing all according to his personal
> preferences?

Are you going "def"?

> >So you wouldn't feel obliged to take pot shots at the ARRL.
>
> The ARRL is a political special-interest group.

It is?

> Any political
> group is open to negative or positive criticsm. It's the
> American Way.

Naw, Len. The American way isn't to make it your life mission to post criticism of an amateur radio membership organization you've never been

associated with. You aren't even a radio amateur. That'd lean toward really peculiar behavior.

> Why does the Dynamic Duo insist on some specious "rule"
> of No Criticsm for a political special-interest group?

I don't know the Dynamic Duo but I'll ask 'em if I run into them.

> >I know it has been pointed out to you before: This isn't a
> >"professional" radio newsgroup. This is an amateur radio newsgroup.
>
> This is specifically an amateur radio policy newsgroup.

You always try to find something. It is still *an amateur radio newsgroup*.

> Since when does amateur radio policy involve automobiles and
> transmission operation thereof...or commercial radio operation...
> or being a professional amateur in a small middle-Africa country
> while on duty with the US government?

Each of those things has been used directly in the discussion over amateur radio licensing matters. In my case--you know, the one about the *West*, not middle-African country--my comments were directly addressed to one clueless individual who claimed that the U.S. government no longer used morse code. I think the guy making the claim was you.

> >So what'd the fun go out of, ham radio licenses or commercial licenses?
> >It wasn't clear from your comment.
>
> The feldwebel is trying to dodge his own order-issuing and
> pretending not to "understand" what is written. That's the
> "Nuremberg defense."

If you don't write it clearly, it is difficult to divine your meaning from the ether. I note that you snipped the incriminating portion to save yourself further embarrassment.

> The ISSUE is, and has been in THIS NEWSGROUP designed to
> hold it, the retention or elimination of the code test for any
> amateur radio license. Self-styled "leaders" (Heil pretends to be
> one as well as judge-jury on radio "fun") insist on keeping the
> code test. Others argue for the elimination of the code test,
> entirely. The TEST, not the elimination of code use.

That's AN ISSUE. Regardless of the original idea behind the formation of the newsgroup, the title includes the terms "radio amateur" and "policy". THIS NEWSGROUP seems to be about any amateur radio policy maters. The morse TEST is only a part of policy. I don't claim any leadership role here. I'm just a cast member.

> People like Heil seem to have "fun" in NOT ARGUING THE
> ISSUE but rather in displaying the usual sociopathic "superior"

> behavior against those not in agreement with his views.

What you've described sounds an awful lot like some of us see you,
Anderson.

> Has Heil read and understood the definitions as they have been
> explained to him?

What are you playing now--prosecutor?

> >...maybe rose gardening would be to your liking. "Good Old Mr. Wilson!"

>
> Heil is no Dennis the Menace, he is merely just another sociopath
> looking for an outlet for his personal frustrations. He should see a
> shrink, not a cartoonist.
>
> Gruss Gott, Herr Obersturmbandsfuhrer.

Len, I don't have a great number of personal frustrations. Unlike you,
a poseur in the world of amateur radio, I've been involved with and
enjoying ham radio for decades.

By the way, I didn't claim to *be* Dennis the Menace, I just read it
with amusement. Your portrayal of George Wilson is startling in its
accuracy. Is THIS the part where you play the "Happy Old Man"?

A random 50 question exam covering the identical Q&A as two random 50/40
question exams will average out to be the same difficulty. The percentage
variance will be greater for the 50 question exam.

Would a one question Extra exam would be more difficult or less difficult?
Why?

I kind of agree with that too.... After taking all the classes required for me as a firefighter, I had even more questions that I did before I went through the classes. The biggest thing a person goes through all of that is to remove as many "what if's" and other questions. Same thing can be applied to ham radio. Kinda like the statement "The more you know, the less you know," because you are enlightened to the point that your scope of the topic has a much broader view.

Mine does.... Quite an extravagant Medical Jump Kit. About the only things I do not have due to cost and/or space limitations are:

Back Boards/K.E.D. Board (do carry C-spine collars though)
Automatic External Defibrillator (costs a bunch)
Suction (costs alot)
PulseOximeter (costs alot)

Overall, I am about at 80 percent of what is required to have in an emergency medical rescue truck that most all fire departments have. The requirements are not there for personal vehicles but due to the fact that I am on a township department, there is a great chance that I could arrive on scene well before the rescue rig gets there, at least I will have most of the tools required to do my job.

I would encourage all to keep a small first aid kit, and I can provide a shopping list for those that may be interested. Obviously to perform care on others it is better to have some form of training, but if they have this material, at least they can attend to their own injuries and maybe their immediate family.

I would encourage ALL hams to pursue Red Cross (or similar equivalent) First Aid and C.P.R. training. Why?

*Aging ham population---never know when one of us may possibly have a medical
condition.
*When out and about you never know when you may run across an medical situation, like
choking, heart attack, lacerations etc.
*When working a disaster as a ham we may actually run across someone who needs
medical attention and medical services personell may not be immediately available.

Training involved? Usually about 4-6 hours for the First aid, and between 6-10 hours for the C.P.R. depending on where, how and when you take the courses.

Ryan KC8PMX
Firefighter/Medical First Responder

I would take his traffic if I was in that position of net control of a CW net. It would be silly and stupid not to take the emergency message traffic from someone who didn't meet the "master level" of morse code. On the average how long exactly in time would it take for a person to send the "average" emergency message at 8wpm? Doesn't seem to me like it would be a huge deal. At least they participating in the mode that some hold dearer to themselves than God, albeit not as fast as the best ops. After all, how does a person get better and faster? Practice of course, and actual operation too.

Ryan KC8PMX

I don't agree with 90% percent of that.... Although use of morse code (the language) (cw is mode of transmission) may drop somewhat over that past years, but it will still be there.

Just because a forced requirement may be removed does not mean that a person must stop using it. There are many people in the hobby that do enjoy morse code and some of these people will still influence others as to what they beleive as the benefits of morse code. As to the 10 percent of what I do agree with, is that I do see morse code being phased out completely, eventually, but not anywhere time soon. Like when I am long into retirement, which will be 35-40 years from now.

From: lenover21@aol.com (Len Over 21)

>>Not at all. He does not believe that ARRL should have a presence on rrap.
>>Our internet outlet is the ARRL web page. He does not have the right to tell
>>me where I spend my personal time, nor would he want to.

>Then why should anyone in here demand some certificate of
>compliance or whatever to post on amateur radio regulations?

No one in here should make such demands, IMHO.

>That may be why you are not doing the ARRL Spin very well.

Then if it were really my job, they would fire me. I post what I believe to be true. It must hit close to home; you keep trying to trivialize it as "ARRL Spin..." -- Capitalizations and all!

>Try to stay with the "important" RFI work and stop the ARRL
>apolgistic propaganda here. You are not doing it well by quoting
>standard ARRL phraseology.

As long as you keep calling it "spin" and deeming me an apologist, I know I am doing better that you would let on, Len. :-)

>Did they ask "everyone" with an interest? I don't think so...despite
>the allegations four years ago that the League was implied to do
>just that. That was dismissed as the "usual ARRL propaganda"
>then and never proved conclusively.

One can "prove" what ARRL asked by reading the pages of QST and ARRL's website, Len. I told you what I believe their words meant; your interpretation appears to be the usual "usual ARRL propaganda." I am content to let the three people reading this make up their own minds, after hearing both of our opinions.

>Does the ARRL have a legal firm on retainer in the DC area?
>Please answer yes or no.

I'm sorry; I thought you knew that. Yes, they do.

>If "all it takes to write a letter" is the ability to compose a
>literate letter in approximately the standard format, why is the
>ARRL paying a legal firm in DC out of membership monies?

I'm sorry, Len; I thought you knew that. ARRL is paying a legal firm for legal advice on the impact of proposed regulations and the best strategy to take with the FCC on filings.

>>>Why does the ARRL insist on being a "middleman" in "how to file
>>>comments?" The FCC explains the procedures directly on its

>>>website.

>>Um, the same website that ARRL links to in the part of ITS website that
>tells
>>hams how to file comments? You are seeing the Devil behind every bush!

>Not at all. I am trying to get a straight answer. I haven't gotten a
>straight answer yet. Why is that so hard to answer?

Because the ARRL is not "insisting" on being a middleman in filings with the FCC, Len. I thought you would understand that when I pointed out that ARRL encourages all hams to file their own comments. Perhaps you did, but it didn't fit your agenda, so you just keep repeating the question.

>Comment on NPRM 98-143 did not require either expertise on RFI
>matters or expertise in "legal wording."

You are correct on the first half; I was not asked for any of my professional input wrt 98-143. I disagree with you that the services of an attorney are not appropriate to the legal wording of an FCC filing.

>You haven't answered my question at all.

You just don't like the answer. To use your favorite words, live with it.

>>Because hams want to buy it. Those that do apparently prefer the plain
>>language explanations to the rules.

>Are you saying that "hams" cannot comprehend the wording in
>Part 97, Title 47 CFR? From your alleged "answer" above, that
>shines through.

What he said: "prefer..." What he heard: "cannot comprehend..."

>All of the Parts
>in Title 47 can be downloaded free of charge from the US
>Government Printing Office site on the Internet; it had been
>available on the FCC site (may still be) as were several other
>Parts.

The links to the FCC rules are available free of charge on the ARRL web site. If hams "cannot comprehend" the ARRL FCC Rule Book and "prefer" to download them for free, the ARRL will stop producing and selling the Rule Book. BTW, Riley Hollingsworth periodically taps his low friend in high places in the ARRL Lab for copies to pass around the FCC, so perhaps the FCC "cannot comprehend" the rules, either. :-)
>Are you saying that "hams" cannot set their VCR timers either?
>Or able to read their ready-built radio equipment operating
>instructions?

What he said: "...hams want to buy it." What he heard" Hams can't read."

Uh, Len, if hams can't read, they wouldn't buy the book, now, eh?

>I give them far more credit and intellectual capability than you do,
>Ed Hare.

By implying that "hams want to buy the FCC Rule Book" to mean that "they can't program a VCR or read the owners manuals of their rig? Kind of an offhand way of offering them "credit," eh?

>You must be insulting them, not the
>"ARS Community."

What he said... What he heard: "Ed hare just insulted the ARS Community." (Capitalization for emphasis that would not otherwise exist duly noted...)

>>I think that most members would feel that it is "not possible" that ARRL
>>exerts some sort of mind control over them, Len.

>True Believers cannot see or comprehend that they've been had by
>88 years of self-promotional propaganda or their overwhelmingly
>major source of news about amateur radio coming from a single
>organization.

Now who is insulting who?

Would you like some links to the other news sources, Len? They are on the ARRL Web site...

>>Big difference between "opinion" and "influence" and "control," Len. Talk
>>about misdirection!
>
>There's absolutely NO "misdirection" in what I said. It is simply
>propaganda designed to convince others that an organization is
>the "best."

Okay, I will take you at your word that what you said is not misdirection, but propaganda.

Both CW and SSB are generally detected using a product detector. The station with the emergency can call the net on SSB and they will hear him just fine. If it is the dire emergency you postulate, such communication is perfectly legal.

>asking far too much.

I think that "guessing" is an important step to determining if Amateur Radio testing is meeting its present goals.

All hams today were tested under a system that has a requirement to demonstrate a modicum of CW skill for some classes of operators. What percentage of those hams do you think could handle emergency traffic on CW under conditions where SSB could not be copied? If the percentage is high, you have made your point. If the percentage is low, the point is lost.

From: n2ey@aol.com (N2EY)

>All depends on the conditions. How many dB advantage would you say CW
>has over SSB, given decent equipment for each mode?

Depends on a few factors, Jim. The first is bandwidth. The necessary bandwidth for slow CW is about 25 Hz. That would give a 20 dB advantage over 2500 Hz. But not many hams have 25 Hz filtering in their rigs. Let's take 500 Hz. That will give 10log(2500/500) dB advantage over SSB, or 7 dB. If the CW station is being received on equipment normally used for SSB, it may have a 2500 Hz bandwidth, giving it 0 dB advantage.

Now, a skilled op can have "mental DSP" that can be might effective at filtering, but I think we can safely presume that this 5 wpm desparate ham will not have such capability.

Even worse, the big reason that Dick offers that it is not possible to change bands is that the emergency is a strorm and static levels are high. There is nothing WORSE than slow CW in high static. Either one has to go about 40 wpm to get bursts of information through in between the crashes, or one has to go about 150 wpm and use voice. Either way, fills will be required, but the 5 wpm CW will probably have a static crash on every character, on average.

He's making a valid point, Cecil.

Here are two questions on the same electrical engineering subject. Which requires more knowledge to answer correctly? Can YOU answer either of them?

Q1: How many electrical connections are there on a typical single impedance bond?

A - 1
B - 2
C - 3
D - 4

Q2: Describe the purpose, construction, operation and testing of a typical single impedance bond.

>Too limited example...but why not.

The point is that toe loops and double axels are such a part of figure-skating expertise that a person who can't do them really can't be considered an expert figure skater. They are not a part of ice hockey, however.

Think it again... Those that refuse to learn CPR include just
about every adult who is capable but hasn't done
so. That IS hundreds of millions of people. CPR classes are
offered in hundreds of venues: Red Cross, Adult Ed programs,
eompany education, etc.

Dick,
YOU have the role and responsibility of recruiting, advocating,
gently nudging. Ed tells you haw he does it. I actually
would consider it a loss if ALL morse operation ceased...BUT
by saying that I do NOT jump to a mandatory need for a
test requirement. That's no different than many "voluntary"
endeavors that people take up. With absolutly NO
government intervention or prompting, people still
take up archery, they learn to drive manual gearbox
vehicles, they learn CPR, they buy, repair, maintain antique
cars, etc. There are HUNDREDS of voluntary efforts
that keep archaic interests alive today....the same will be so
for Morse Code in the amateur bands...of that I have NO
doubt at all.

Cheers,
Bill K2UNK

A couple of points to consider. If the guy is calling on CW, that is what he has available. If he had SSB available, *I* assume he'd be using it, as I would in his situation, so long as it was usable. So, since he is on CW I won't likely waste much time suggesting to him that we shift to SSB, however a quick question on his capabilities and gear certainly would be proper, so as to overlook nothing. But you can't assume anything.

YOU lost the point, or more likely deliberately dumped it. The point has always
been that some code testing is necessary if any substantial numbers of hams are to
become qualified as CW operators. Without any test whatever, so few will ever do so
that CW as a mode is gone in the period of a generation or so. That is the future,
based on past history. Ignore it as you
wish, but no whitewash will alter it.

So, in your view every adult who has not undergone training in CPR has "refused" it.
That's very novel, and a window to your thought process.
A great many adults have not been afforded the opportunity to have that training, and you state that places them in the "refused" column because the training is available in many venues. Wrong. The cagtegory of persons who have been offered the opportunity to take the training and rejected the opportunity are those who have refused it. One has to have a choice to refuse. No opportunity offered, no refusal. It's really not that complex, Bill.

So you're having comprehension problems too, still. No one said that anything "disproves" anything that Shannon did. What was said is that theory and practice don't always coincide and the example given was an instance of that very concept- where the more efficient mode fails under conditions in which the lesser efficient works. To insist on placing restraints on the working mode just to "level the playing field" for scientific comparison is not only poor practice, it is poor engineering. Engineering should have a useful point, and such a plan is not useful in the least.
Cecil wants us to forget that the communications channel in the case presented was fixed at a certain bandwidth. Under that set of conditions, CW was the working mode and PSK31 was not.
Shannon stated what was the maximum efficiency possible, not what one finds in everyday practice.

Ed, the worsened level of static would be found on 75 meters, the band to which the frequency change would be made. It commonly happens that static levels are not so bad on 40 when they are wiping out 75/80, making communications possible if a bit difficult on 40 but impossible on 75/80 meters.

My personal experience tells me that given the choices and conditions noted that I would have a better chance of passing traffic on 40 meter CW than on 75 meter SSB.

"Decent equipment" will do at least a 250 Hz CW bandwidth, Ed.

> If the CW station is
> being received on equipment normally used for SSB, it may have a 2500 Hz
> bandwidth, giving it 0 dB advantage.

The boundary conditions were "decent equipment for each mode". Considering
the filtering available in even inexpensive QRP CW rigs (Elecraft K1, for
example), there's no reason to suffer with SSB selectivity on CW.
>
> Now, a skilled op can have "mental DSP" that can be might effective at
> filtering, but I think we can safely presume that this 5 wpm desparate ham will
> not have such capability.

Back when I was a would-be ham, and a Novice, I learned the code using receivers
with "AM" selectivity - typically 6-10 kHz or more. I learned to dig one CW
signal out of the mess even before I knew the code. So it's quite possible
that a slow speed operator can dig a signal out of the mess.

CW has some other advantages over SSB. For one thing, the CW signal is
"fully voiced" - a 100 W CW rig puts out 100 W when the key is down and
0 W when the key is up. An SSB rig of equivalent power is all over the place,
power-wise.

And the S/N necessary to copy CW is usually less than the S/N necessary to
copy SSB.

As for Dick's case of not changing bands because of static level, I think you
misunderstand.

Changing bands to get better propagation is a good move, and may be better than
changing modes. The big "IF", though, is whether better propagation can be had
on another frequency. If 40 is noisy, 75 will often be even noisier. 20 will
probably be quieter, but may not have propagation to cover the desired area.

Wasn't propagation one of the reasons given for amateurs needing a 60 meter band?

73 de Jim, N2EY

1358. Socio-Politico-Economic Factors in Ham Testing

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-13 15:37:46 UTC
From: Valentine Germann <vgermann@socket.net>
Message-ID: <u8urhdn0mvng0a@corp.supernews.com>
Source record: 37403

Hello, all!

Ham Radio is almost unique in that a government agency
is involved in its regulation AND a series of qualifying tests
is required. The only other avocation that is in this class
would be, I believe, sport flying.

As far as the public interest is concerned the primary policy
issues revolve around the best- and most-orderly use of the
public airwaves by amateur operators, interference with
other users of adjacent frequencies or other electronic
equipment, and safety, of both the operator and passers by.

The size and cost of the regulatory apparatus varies with
the entry level cost of the avocation, and the importance
of vetting entrants into the avocation. That is, getting into
general aviation is expensive and so that tends to self-limit
the potential candidates, even before any consideration of
skill and/or competence. The penatlies for bad flying go
far beyond the embarrassment of losing one's license.
Cratering into the landscape makes any such government
action moot, a fact which tends to focus attention and deflect
a lot of criticism of "government harrassment" where pilot
testing is concerned. Crashing airplanes are just bad for
everyone, even the people on whom they fall.

Yet even this does not stop people from drinking and flying,
or even deliberately piloting small planes into large buildings.
Surely, we know that the days of "Libertarianism" are about
over, what with the USA approaching 285 million people,
spread over about fifty ethnic groups. The thought of a
Libertarian Committee within every U.S. ethnic goup should
be a sobering thought for anyone. Experience is a hard teacher,
especially for those who refuse to learn.

There is no liberty without rules and freedom is meaningless
without a legal framework that is agreed upon and enforced.

Now, Ham Radio is not general aviation. You can't die
immediately from lousy operating. And the interference
and safety issues are, on a national level, small, though
they are important within the field. The main issues then
are the internal distribution of "air space" and the vetting
of new entrants. Not long ago the entry level cost was a
huge disincentive, long before the testing issue reared
its head. That tended to, er, we'll let that go. Today all of

this has changed and anyone, ANYONE, can get into the tent and, in the words of one poster here, start "pissing."

That is, it used to be expensive, one way or another, to even START to be a Ham. Thirty years ago the entry level cost, in 2002 dollars, was rather high, either in time or money. And you had to go take a GOVERNMENT TEST, administered by a GOVERNMENT employee, at a real live GOVERNMENT FACILITY. You REALLY got the idea that Ham Radio was SOMETHING! Last week, a friend of mine "got into Ham Radio" (in about ten minutes at the counter) for the princely sum of $119.95, at Radio Shack. And the test he had to take, and which I will take in just a few days, was administered locally and was pretty easy, particularly since the Q's and A's were, er, KNOWN!

How is this possible and what does it mean for the future of amateur radio?

Well, in ye olden days there weren't any repeaters, and those devices, invented and installed by the WWII gen-eration of Hams, out of a desire for effective mobile com-munications, took the responsibilty for big power and an expensive antenna away from the mobile operator and shifted it to the club. This, combined with imported solid-state gear that is mass-marketed, has served to drop the entry dollar-cost all the way down to what amounts to coffee money. That, combined with a vast decrease in the amount of regulatory trouble it takes to get a Ham Ticket, has REALLY changed everything.

On the one hand, what can be "wrong" with all of this? Isn't more ALWAYS better? Such is the American way, I guess. If one million cars are good, 200 million cars have to be 200 million times BETTER, unless they're all trying to park at once, OR are mainly burning petroleum we have to import from the volatile Middle East. But I digress. Surely, surely, making it possible for the maximum number of prospective candidates to actually get a Ham license HAS to be good? After all, growth is ALWAYS good, isn't it? And to remain static or, horror of horrors, to DECINE in numbers, well, that is surely DEATH, am I right, even when the base is in the HUNDREDS of THOUSNDS?

But no, all growth is NOT good. Check out the definition of cancer. The amateur radio bands are a "commons" that can only be maintained when the community of users can agree on a way to both exploit them, for communication, while at the same time preserving and protecting them. Efficient modes should be ENCOURAGED ACTIVELY, particularly when you are making vast efforts to increase

the total numbers of Hams. To do otherwise is surely suicide, slow or fast.

But, it doesn't matter anyway does it? As Keynes said so well: "In the long run we're all dead."

Val Germann
Columbia, Missouri

I can multitask certain things but CW takes my undivided attention.
On a related note, I cannot write on a chalk board and talk at
the same time. Apparently, writing takes my undivided attention.

Wrong! During the only time in history that a code exam was not required,
amateur radio use of Morse code exploded. Besides that time, there is no
history of amateur radio without a code test requirment.

There is no doubt that CW has an advantage over SSB. But the atmosphere
has magnitudes more effect than that advantage. If the atmospheric
propagation is failing at 2dB per minute, one has about five minutes
of time (plus or minus) when CW gets through and SSB doesn't.

I have my original ARRL license manual from 1955. The questions are
similar in difficulty to the questions on todays examinations, but
narrower in scope because the technology of the day was much less
advanced.

You are so extremely wrong, Dick. The communications channel was fixed
at 31 Hz by the PSK31 software. You certainly cannot read CW in a 31 Hz
communications channel. You are making a fool of yourself by comparing
apples and oranges.

> >terrorist attacks. I really don't.

There is no way to guarantee prevention of all possible attacks. There is also
no way to make a ship that cannot sink. But there are ways to minimize the
danger and the loss of life and property to such disasters.

> > I also don't think you'll find many of
> >the proportion of the WTC.

If not, the ONLY reason will be because all practical measures have been taken
to prevent them. Measures taken by our government, our military, our
intelligence agencies, and our allies. And by ourselves.
>
> Now THIS scares me...it's defeatism.

Possibly, Steve. It could also be laziness, as in "I don't want to make
any effort or give anything up".

> >I truly, truly don't want to sound flippant here
> >but, for the sake of debate, didn't Osama bin Laden himself say that the

Yup. Its prevention must become our way of life.
>
> >All we end up doing
> >by striking out to erradicate it, is probably putting ourselves into more of
> >a box. I don't particularly care to give in like that.

Then what should be done, Kim? Just sit back and wait for the next one? That's what permitted the bad guys to get enough resources in place.
>
> The Jews tried that...it was called apeasement. It didn't work for them,
> either.

I think you mean the Allied governments like Britain and France, who did not hold Germany to the letter of the Versailles treaty.
>
> >Truly? I'd rather ask those thousands of people.

Who? Millions of Jews and millions of non-Jews were systematically murdered by the Nazi regime simply for being who they were.

> >Myself? I'd be willing
> >to put my life on the line to allow more liberty, freedom, whatever we want
> >to call it. To do otherwise, in my opinion, is to let "them" win.

How, exactly, would you be willing to "put your life on the line", Kim? Are you going to enlist? Fly on airliners with no security measures? Refuse to pay taxes that support increased security measures?
>
> Then you can't have it both ways. We either decide that our way of life
> is righteous and worthy of defense, or we surrender. It's that simple.

And defense takes all kinds of forms. For example, this country is way too dependent on imported oil. What can be done to reduce and eliminate that dependence?
>
> >What if you and I "joke around" about something that raises suspicion? Next

> feds.

Exactly, Steve. Every freedom carries with it a responsibility. Free speech does not mean the right to yell "Fire" in a crowded theater when there is no fire, and you are just "joking around".

It used to be "funny" to "joke around" about people's race, religion, ancestry, and stuff like that. We have learned those things are not to be joked about. Same basic principle applies.
>
> >Next

You got it, Steve.

One more point:

Most of us will never know how many attacks have been thwarted by the
vigilance of our security people. Indeed, the security folks themselves
may never know how many lives they saved by their actions to counter
terrorist activity.

DICK...you lose because your statement is nothing but wild
speculation. Additionally you still fail to provide anyone with what
YOU consider "substantial" to be. Is it some percentage of
licensed hams? Some percentage of active hams? Some
finite number (i.e. at least 50,ooo US hams, N number of
worldwide hams?)

> Without any test whatever, so few will ever do so
> that CW as a mode is gone in the period of a generation or so.

Just like there are no longer any archery enthusiasts,
just like there are no more drivers of manual gearbox
vehicles, just like there are no more (insert any
number of activities that survive based solely on
volunteers to keep the interests alive).

> That is the future,
> based on past history.

What past history? How about some examples to give you
claim at least a semblence of credibility?

> Ignore it as you wish, but no whitewash will alter it.

No whitewash is needed. Your "fear" is akin to crying
wolf when there is none.

Don't forget SCUBA diving. One must be certified in order
to get one's tank filled. There are probably other examples.

> There is no liberty without rules and freedom is meaningless
> without a legal framework that is agreed upon and enforced.

Some rules guarantee liberty, some rules destroy liberty.
A rational human being should be able to recognize the
difference.

> But no, all growth is NOT good.

The lack of widespread public interest and the entrance exams
have historically been pretty effective in defining the ham
population. IMO, the major problem facing the ARS in the
future will be in finding recruits, not in being overwhelmed
by masses of the unwashed. Not everyone likes to talk to
strangers.

Availability of narrower (narrower than SSB) filtering
is usually an extra cost option.

I would venture to say that just about any adult that "wanted to"
could get CPR training somewhere...often at no $$$ cost to themselves.

> The cagtegory of persons who have
> been offered the opportunity to take the training and rejected the
opportunity
> are those who have refused it. One has to have a choice to refuse.

The "choice" comes to just about every household that gets their
local adult education class offering catalog. Most are sent
to "RESIDENT" via bulk mailings.

> No opportunity offered, no refusal. It's really not that complex, Bill.

And I will state again that even using your "opportunity offered"
criteria, the vast majority of adults have, in fact,
had that offer. You're right, it isn't that complex.

If I remember correctly, when the Novice license was brand new, one had to live 150 miles from the nearest FCC testing office for it to be taken by mail. I took my Novice exam at the FCC office in Houston in 1951. Sometime later, they changed the mileage requirement to 75 miles and by 1957, the Novice license could only be taken by mail. I don't know the exact date of the changeover.

There have been hundreds of thousands of U.S. Hams for a very long time, even under the old regime. Concerns about its extinction seem bizarre, considering the size of the U.S. and the general level of education and interest in technical things here. Maintaining high standards would have many long-run benefits even if the total number of licensed operators declined.

Val

What is the specific regulation identifier in Part 97, Title 47 CFR?

>Note that the rule actually forbids concealing the meaning of radio
>messages transmitted by amateurs, by any means, not just encryption.
>For example, the message "Should everyone leave long envelopes? Not
>required or necessary." looks innocent enough until you look at just the
>first letter of each word.

"SELLENRON" looked perfectly innocent a year ago. :-)

Tsk, tsk, amateur steganogrphy and bad crypto procedure by not
including any null characters. Try the "should everyone leave
letters? Envelopes not required or necessary." The question mark
can be used as a null. That avoids confusion with the name of
Ronald Sellen versus a corporate name.

>These regulations originated early in the history of radio, and were driven by
>experiences with the hiding secret messages in telegrams, and the covert use
>of radio such as the Telefunken station in the USA during the early part of
>WW1.

Were they? "Covert use of radio during world war ONE?!?" Was
Telefunken using transistoried radios on UHF to "hide" all those
tall radio antennas in 1916?!? :-)

The use of "codes and ciphers" was well-established in landline
manual telegraphy for nearly a half-century before radio became
a communications medium of any sort. World-wide. Code books
were openly published and sold prior to 1900. "Bentley's
Commercial Codes" was one of the more popular of such books,
having many editions.

>Does any of this stop the bad guys from encrypting stuff and hiding messages?
>Probably not, but it gives the govt. something to prosecute with.

Reset the "wayback machine." Try 1957 and KGB Colonel Rudolph
Abel, supposed artist with a "hobby of ham radio." :-)

>The FCC does monitor hams to some extent, and is required by law to be able
>to monitor any amateur transmission.

Oh? It usurps duties of the NSA? "Monitor?" Is that part of
"regulation?"

Must be...the FCC still requires a complete record of all non-standard
mode transmissions by radio amateurs.

>73 de Jim "not an expert" N2EY

Oh? "Not an expert?!?" Is this a new change of heart or what? :-)

stepped up on his feldherrnhugel and shouted:

>> The ISSUE is, and has been in THIS NEWSGROUP designed to
>> hold it, the retention or elimination of the code test for any
>> amateur radio license. Self-styled "leaders" (Heil pretends to be
>> one as well as judge-jury on radio "fun") insist on keeping the
>> code test. Others argue for the elimination of the code test,
>> entirely. The TEST, not the elimination of code use.
>
>That's AN ISSUE. Regardless of the original idea behind the formation
>of the newsgroup, the title includes the terms "radio amateur" and
>"policy". THIS NEWSGROUP seems to be about any amateur radio policy
>maters. The morse TEST is only a part of policy. I don't claim any
>leadership role here. I'm just a cast member.

"Cast?" [plaster?] "There's no business like show business..." :-)

"radio policy maters?" Is Herr Robust feeling injured about "alma maters?"
:-)

[perhaps his ample tummy had too many 'taters? :-)]

Hokay, Fearless Leader, let's look at the newsgroup content for those
postings of 13 March 2002: A forced "issue" about personal firearms,
regional permits and 'right to carry;' US Civil War tales supposedly
true about landline telegraphy jobs; a forced "issue" about licensing
which compares "sport flying" (private flying) to amateur radio; mentions
of automotive engineering and auto driving; cardio-pulmonary
resuscitation as somehow analagous to "emergency communication;"
a continuing insistence on one military service branch and a
government secretariat as a "goodness" example in communictions.
Of course there are all these "injured psyches" floating around wailing
about "wounds suffered in newsgroup wars" and that they are
"triumphant and expert" just because they say they are so and that
their own personal viewpoints MUST prevail. :-)

Hardly any cogent statements on any "policies" for anything except
that their personal preferences are "reasons" to apply to regulations
which will affect all who follow. A prime example of the self-styled
"leader" complex in any recreational activity. All must enjoy what
the "leader" enjoys whether they like it or not. The "leader" has
spoken. The "leader" can do no wrong...by his own admission. :-)

>What you've described sounds an awful lot like some of us see you,
>Anderson.

Tsk, tsk, Heil looks in a mirror and pretends it is a clear window... :-)

>Len, I don't have a great number of personal frustrations. Unlike you,
>a poseur in the world of amateur radio, I've been involved with and
>enjoying ham radio for decades.

...as a prideful, certificated, boastful self-styled "expert" by amateur tenure. No problem with that...it shines through load and clear with every chat-room round fired. :-)

What you've managed to state in a couple of rather typically long and windy paragraphs is that not everything (including the post to which I now reply) is on topic. Take it up with the newsgroup police.

> >What you've described sounds an awful lot like some of us see you,
> >Anderson.
>
> Tsk, tsk, Heil looks in a mirror and pretends it is a clear window... :-)

Smiley discounted. I've already said as much to you, Anderson.

> every chat-room round fired. :-)

Those adjectives are terms used by you to deaden the apparent pain you suffer at being no more than a sidewalk superintendent to amateur radio. That's the case no matter how much baloney you slice. You can put ten antennas on your car. You can own a CB transceiver and several scanners. You can place an ARRL decal in your front window. You're still not a radio amateur. Does that come through "load" and clear? "Load" them 'maters on the truck, will you?

This isn't a chat room. I only point it out in case you've been damning your ISP for slow access during your "chats".

>earned doing summer jobs.

And in 2002 dollars how much was that? If you do
the implicit price deflator on that . . . ouch.

>Not for all tests...novice never required that, neither
>did Tech.

Correct. My apologies. I should have qualified that.

>Not for the exceptions noted above. Also there were
>other exceptions based on distances, etc.

Correct. I should have qualified those.

>In those days, compared to what other concumer/public
>electrical/electronic wonders were about, ham radio was
>indeed quite remarkable.

This is a subject for investigation right here. Grade
schools had a "Ham Presence" even in my small town
way back when. Not so today. What has happened?
That is, amateur radio is "no big thing" today and in
many respects seems satisifed with that. Very strange.

>So? Would you rather he had to spend hundreds more?
[for an introductory radio].

It's a lot more than that, isn't it? The whole process
hugely different, not as significant. What is too easily
attained lacks proper appreciation; what is cheap,
in both time and money, lacks value.

>The tech was locally adminsitered also back in 1950s.
>The Q&A was only 16 pages of an ARRL license manual.

True . . . but you didn't have the answer book.

>What should be changed?

Is Ham Radio important or isn't it? In my view, it is, and
it's important enough for serious attention from the FCC,
not the half-hearted effort we see now. As someone
who is returning to amateur radio, who was a "hanger-on"
in the long ago, I have been shocked to see what I feel
is a serious drop in status for Ham Radio, regardless of
the numbers, as well as serious internal divisions that
are at best ugly and at worst threatening to everyone.
I have been astonished by what I have been told directly
by technicans in the area here, people "inside the tent."
The whole "ethos" of amateur radio, as I understand it,
is simply non existant in these folks. It's scary, to me.
Whatever it is that brought THIS change on is, for me,
part of the problem, not the long-run solution.

>I await the response [as to what the recent changes
mean for amateur radio].

More and more folks like the above. Continued divisions,
growing over time. Continued loss of status. More and
more problems of various kinds (arguments over band
plans, fights over modes) leading to loss of "air space"
as the regulatory dinosaur clumsily "adjusts" things. In
short, a self-perpetuating downward spiral.

>Repeaters don't require big power or expensive antennas.

Sorry to have been unclear. This is part of the "entry-level"
argument. The H/T really IS all you need.

>And is that [flood of low-priced radios] a problem in your view?

It is when combined with the other factors.

>It [regulatory changes] has? How? On what do you base your
>conclusion?

See above.

>You haven't shown anything at all to base being right
>or wrong about anything.

C'est la vie, isn't it!

>Wowsers! We are really into fantasy land. Amateur
>growth might be considered akin to a cancer.

I put that in EXPRESSLY to generate this response.
Yes, it was a form of trolling!

>And do you think that [protection of "air space"] isn't
>happening?

In the largest sense, NO! It's every man for himself, in
some circles, and devil take the hindmost. It's a very
good thing that no commercial interest has any REAL

designs on Ham Frequencies. Divide and conquer tactics could work miracles for them now.

[concerning efficient modes being ACTIVELY ENCOURAGED]

> What do you think led to SSB?

Off the point. You know what I mean here.

Not that long ago most all routine CW conversations included much of this economy of verbiage. Today it's not so common at all, seems everyone thinks it all needs to be spelled out.

"ge om ur 579 hr in stlouis mo stlouis mo rig is 100 w to a dipole ant es name hr is dick dick bt hw cpi?"

wouldn't make much sense to most new CW ops, it seems.

> Availability of narrower (narrower than SSB) filtering
> is usually an extra cost option.

Only in some equipment made primarily for SSB. There are lots of low-cost CW rigs on the market today that have good CW filtering built-in as standard.

My Southgate Type 7 transceiver uses cascaded 8-pole filters. One is between the mixer and first IF amplifier stage, and a second one is between the first and second IF amplifier stages. These are backed up by a passive LC audio filter.

For the homebrewer, narrow filters may be found in the surplus market (I picked up a really nice one on eBay for $10 a few weeks ago) designed from scratch or obtained new from dealers. Inrad has an excellent selection of filters, plus a low-cost ($25) set of matched crystals and capacitors for the homebrewer. Design of ladder filters has been well-covered in amateur mags like QST for 20 years or so.

When required, an optional narrow filter is usually only a small percentage of the price of a new rig.

Also, many manufacturers are touting that their rigs have DSP, which permits many different filter characteristics to be realized for just the price of specifying the parameters.

So there's no reason to put up with less-than-optimum CW selectivity, except by choice or poor planning and preparation.

Dick,

While I actually agree with some of what you say, I think we could
use a level set about just how radically different a place the world
is with respect to global communications, both qualitatively and
quantitatively, than it was when the bulk of amateur regulations were
conceived, and guess from that how this change may have influenced
the FCC. If you look at

http://www.ietf.org/rfc/rfc1009.txt

you'll find an early standard for Internet "gateways" (an old term for
what are called "routers" now, the switches from which Internet infrastructure
is built). It was published in June, 1987, and has the following to
say about router performance. Note that "datagram" is a (slightly anal
retentive) near-synonym for "packet".

Gateways in the global-interconnect system generally require:
[...]
* High performance

Although long-haul lines in the Internet today are most
frequently 56 Kbps, DS1 lines (1.5 Mbps) are of increasing
importance, and even higher speeds are likely in the future.
Full-duplex operation is provided at any of these speeds.

The average size of Internet datagrams is rather small, of
the order of 100 bytes. At DS1 line speeds, the
per-datagram processing capability of the gateways, rather
than the line speed, is likely to be the bottleneck. To
fill a DS1 line with average-sized Internet datagrams, a
gateway would need to pass -- receive, route, and send --
2,000 datagrams per second per interface. That is, a
gateway which supported 3 DS1 lines and and Ethernet
interface would need to be able to pass a dazzling 2,000
datagrams per second in each direction on each of the
interfaces, or a aggregate throughput of 8,000 datagrams per
second, in order to fully utilize DS1 lines. This is beyond
the capability of current gateways.

(The use of the word "dazzling" in a standard is one reason why I really like Internet standards).

Note how this evaluation of the state-of-the-art 15 years ago considers switching 8,000 packets per second of traffic from 3 DS1s to be beyond what was achievable then. The state-of-the-art router now is a box which consumes about 36 inches of rack space which will switch 2 billion packets per second through aggregate bandwidth equivalent to more than 200,000 DS1s. The time I've been paying attention to this stuff has spanned an improvement in the high end of the technology by a factor of 10^6.

Essentially raw, uncontrolled communications capacity has just exploded. I personally know of about 40 Gbps of Internet undersea bandwidth leaving the US and going somewhere else, and there's probably lots more I don't know about. Long distance phone calls are cheap, so overseas phone usage is also far, far higher than it used to be. There's satellite services which hop directly out of the country. Extremely strong encryption is available to ordinary people, let alone the bad guys, despite the best effort of the NSA to prevent that, and the nature of (wired) Internet connectivity (perhaps due to the long-ago military design influence, but more likely because this is the best way to build digital networks in general) resists any attempt to limit what people do with that connectivity. Given these radical changes in technology, the job of protecting national security has become one of coping with a world where instantaneous global communication is a given, and I don't think there's any regulation that could put that genie back in the bottle. And while, even just two decades ago, amateur radio might have represented a significant fraction of (then-well-regulated) international communications, it has dwindled to insignificance compared to the scale of the advance of wired "spectrum".

And even if the post-9/11 world has changed enough that someone might be tempted to try the regulation approach anyway, there's also the consideration of what it is that "national security" is supposed to be securing, and how it is supposed to accomplish that? Americans can afford to give substantial resources to defense because they are quite wealthy, relatively speaking. Americans have a high standard of living, even though this makes Americans uncompetitive with parts of the rest of the world for many traditional economic activities, because Americans keep inventing new, high value, things to do instead. The reason the US is so well connected by communications networks to the rest of the world is that the technology which supports this is one of those American inventions. It is fundamentally American, developed from American experience of attempting to build stuff, and the prime reason that happened (and, in fact, the reason I live here, for whatever that's worth) is that the liberalization of the American telecommunications industry and policy which started with the breakup of AT&T in the middle 80's meant that for a period you could actually build stuff in the US which you could only theorize (or dream) about pretty much anywhere else in the world. You can only really learn about something if you make use of the opportunity to try it, and at one point in this field this opportunity was uniquely

American. You don't want to stifle this for future technology, you won't prevent the technology from being developed but what you may do is encourage the technology to be developed elsewhere and that is a worse outcome for both the US economy and US security (we know this since this is approximately the result of US restrictions on the export of encryption technology). Since regulating the use of technology doesn't work, the best thing for national security is to at least retain the secondary control benefits which accrue from having technology invented first in the US and having the expertise that develops around this activity resident in the US. This means providing people with as much support and as broad a freedom to invent as possible, and if long-term security is your concern this becomes even more important going forward.

Also note that FCC, as well as congressional (and even Al Gore's), policy had a significant role in the restructuring of US communicatons that led to this, and while everything they do has both positive and negative consequences I've got a feeling they view this as one of the things they managed to do mostly right. In fact I suspect this and similar success is in good measure responsible for the FCC's apparent current bias towards policies favouring innovation at the expense of maintaining strict order in spectrum allocation decisions, a bias which is causing the ARRL no small amount of grief defending what amateurs have now in the higher-frequency spectrum and which apparently wasn't envisioned when the Communications Act was written (as the ARRL is fond of pointing out to the FCC these days). Times change, priorities change and trying to un-change any of it is hopeless.

So my bet would be that, in keeping with current preferences, the FCC would likely prefer to err on the side of allowing amateurs anything that the FCC could somehow be convinced might conceivably promote "innovation". The additional security exposure this might cost is miniscule given the enormous, unconstrained-use bandwidth that exists already, and given the high value placed on useful new technology applications the off-chance that amateurs might find one or two of these probably more than offsets that minimal risk.

Despite this, however, and while I'm probably at the radical fringe concerning content regulations, even I don't see any particular value in relaxing the encryption, content-transparency and record-keeping regulations at HF where the channels are narrow bandwidth with international reach. The current regulations seem fine to me, it is only the mode stuff that is arcane. In the high UHF and SHF amateur bands I do have some difficulty with the encryption constraints due to the applications the big bandwidth short reach (i.e. both ends domestic) circuits possible there get put to, but at HF I think the current content constraints constrain very little and are hence perfectly appropriate. I didn't mean to imply anything else.

>
> Not for the exceptions noted above. Also there were
> other exceptions based on distances, etc.

When the Novice and Technician were created in 1951, exams for those licenses were given at FCC offices just like the other license classes. The only exceptions were for people with permanent disabilities that precluded their going to a test session, or permanent residence at least 125 miles "air-line" from an FCC quarterly exam point.

In 1954, the Novice and Tech were made by-mail only, regardless of distance from an FCC office. The distance requirement was decreased from 125 miles to 75 miles in that year, too.

In 1963 the distance requirement was raised to 175 miles "air-line".

Which times are you talking about, Cecil?

Before 1912, there was no mandatory licensing of amateur stations. Since 1991,
there has been a class of amateur license in the USA with no code test.

Has amateur radio use of Morse code "exploded" since 1991?

I should have said, "Besides that time, there is no history of HF amateur radio
without a code test requirement." I assumed that was understood.

Good info, Dennis, and right to the point. Your reasoning on the issue looks right on target to me. I really see no reason why regulators would assume that because so many avenues of communication are open to abuse they should for that reason deregulate ham radio. Your point about different rules for short range bands sounds very reasonable, and I would hope you might pass these comments on to the FCC when the time comes they are needed.
Thanks for the excellent overview. Too many of you guys with lots of current knowledge are without the means to communicate it. You do it very well, and I appreciate it.

Dick

Tell ya what Cecil, you be the genius and I'll take whatever role is
left. I'll have far more fun.

But you are simply wrong. The parameters of the communications
channel were set by my equipment on that day, not by Shannon's theories.
Nor by the PSK31 signals I was copying.
Doncha feel a bit foolish, trying to force theory over practice when
it
refuses to fit?

And you so conveniently fail to note that during that time there was NO
OTHER mode of radio in existence other than radiotelegraphy! Amazing how
selective your observations are!

> Besides that time, there is no
> history of amateur radio without a code test requirment.

Right, and in light of that, we look to history as recounted by most
hams as to whether or not they would have voluntarily learned Morse code
to
a useful level. Almost to a man, the answer is no, your alleged Cub
Scout
experience notwithstanding. I also learned Morse code before becoming a
ham, but strangely, I didn't learn it nearly well enough to pass the
Novice code test!
I figure your experience was no different.

You live across the river from a big hole in the ground where not long ago there sat a pair of huge buildings, and you don't believe that similar acts could come from the use of unrestricted use of ham radio communications.
"Gee, they can already use the telephone system or the internet". So all is well, FCC will just let hams do whatever they want, wherever they decide to do it on their authorized frequencies. Rent a clue, would ya?

I didn't fail to notice that, Dick. Do you want to outlaw all modes except CW?
If you had been head of the FCC, would you have outlawed AM?

> > Besides that time, there is no

That is simply unadulterated BS, Dick. It is true that "most" would not
have chosen to learn it just as "most" choose not to use it today. It is
completely untrue that "Almost to a man, the answer is no". The hams who
were attracted to CW would have learned Morse code. My estimate is that
is about 20% of all hams, certainly a not insignificant number. I certainly
would have used CW, test or no test. I'll bet Ed would have also. For hams
who love CW, the test is irrelevant. Too bad that doesn't include you.

Hello, Mr. Carroll!

As you may have noticed, I've stopped responding
to most of these folks, at least within this thread. As
a general rule, anyone who puts up literally hundreds
of one- and two-line messges, over many months, is
in need of professional care, in my view. Total them
all up, content-wise, and then turn them all into gasoline.
Why, if you did that there wouldn't enough fuel to run a
piss-ant's motorcycle around the inside of a Cheerio.

Val

Your similes need a smiley. :-)

You do not cement anything with your words and your baloney is ersatz.

>You can put ten
>antennas on your car. You can own a CB transceiver and several
>scanners. You can place an ARRL decal in your front window. You're
>still not a radio amateur. Does that come through "load" and clear?

Oh, my, aren't you twirling your riot baton with your lil radio cop uniform starched and crisp. :-)

Tsk, tsk, Fearless Leader still doesn't understand. Sigh, once more as to children:

The morse code test for an amateur radio license applies only to those who are interested in becoming a radio amateur with below-30-MHz privileges. It does NOT affect those already licensed who already have those privileges...except in their lil warped "leadership" minds who seek to "rule" where they have NO authorization.

Fearless Leader does NOT rule. He attempts to intimidate, to bully others. Tsk, tsk, that cannot be done in a computer-modem environment-medium. Fearless Leader keeps on his quest just the same, trying to tilt the windmills of his mind. :-)

Presumably Fearless Leader thinks that morsemanship is ALL about amateur radio and that all must prove their "worth" to him. He cannot abide anyone not going through the same rituals and hazing he did.

>This isn't a chat room. I only point it out in case you've been damning
>your ISP for slow access during your "chats".

This newsgroup has become a de facto Chat Room...and part-time wind tunnel where the same vanity-callsign air bags wheezingly vent their personal frustrations against those who do not buy into their bullying tactics.

See your medical doctor for some medication that might make your attitudes more civilized and certainly for those delusions and hallucinations you are exhibiting.

There is no "damning my ISP" on account of "slow access." AOL was already well known for that. :-)

There are no multiple "antennas on my car." There is no "ARRL decal" on it, either, nor would there be one for any reason. Amateur radio is a hobby, an interesting, enjoyable hobby. Does Fearless Leader condemn all who engage in a hobby rather than his idea that it should become a lifestyle as He Does It?!? Yes, he does.

Fearless Leader does not allow anyone to be "interested" in something unless they embrace it totally for the major part of their life, to DO AS HE DID or be forever damned. Not a good attitude for a human being trying to coexist with others of his own species. That is, of course, being optimistic that FL is actually a part of all others' species.

>in the long ago, I have been shocked to see what I feel
>is a serious drop in status for Ham Radio, regardless of
>the numbers, as well as serious internal divisions that
>are at best ugly and at worst threatening to everyone.

That is a matter of perception, isn't it? :-)

Have you considered (ever) that the older ideas and the
self-descriptions of "glory and honor and importance" were
never really there? Why does an enjoyable, technologically-
fascinating hobby have to become a lifestyle? Have you ever
considered that those who make a hobby their lifestyle are not
automatically elevated to some superior god-like status for
their personal choices?

>I have been astonished by what I have been told directly
>by technicans in the area here, people "inside the tent."
>The whole "ethos" of amateur radio, as I understand it,
>is simply non existant in these folks.

Are you disturbed that amateur radio hobbyists are mere
mortals afterall? :-)

Note that such astounds some of the self-styled gods who
wish to "rule" over others. I'm sure that they are most
perplexed and outraged that they are not obeyed... :-)

>It's scary, to me.
>Whatever it is that brought THIS change on is, for me,
>part of the problem, not the long-run solution.

Teacher, educate yourself. "Solutions" are not obtained
by continually pissing about "things were different in the
old days!" :-)

>More and more folks like the above. Continued divisions,
>growing over time. Continued loss of status. More and
>more problems of various kinds (arguments over band

>plans, fights over modes) leading to loss of "air space"
>as the regulatory dinosaur clumsily "adjusts" things. In
>short, a self-perpetuating downward spiral.

"Loss of 'air space' (spectrum allocations)?" Amateur radio
allocations in the last half century have GAINED more
spectrum below 30 MHz than they ever had before you
were born. :-)

Some Europeans even gained "ham bands" below MF. The
USA has been very slow in that particular area.

>>You haven't shown anything at all to base being right
>>or wrong about anything.
>
>C'est la vie, isn't it!

No, you've taken up "c'est la guerre" but without troops,
munitions, or supplies in this newsgroup.

>In the largest sense, NO! It's every man for himself, in
>some circles, and devil take the hindmost. It's a very
>good thing that no commercial interest has any REAL
>designs on Ham Frequencies.

You cannot seriously use that little myth, can you?

Note: "Ham Frequencies" go right on up to the upper
allocation limit of 300 GHz.

>Divide and conquer
>tactics could work miracles for them now.

Sorry, but there are so many OTHER users of radio that
their sheer numbers of them as citizens make the FCC
listen to them.

Teacher, educate yourself. The communications environment
has grown much bigger than you could possibly imagine. It
isn't, never has been static since 1950.

Amateurs do not "own" spectral "land" and never did. Trying to
promote a hobby activity on vague, unsubstantiated mythos of
long-ago "glory and importance" is itself doomed to failure.

There is nothing wrong with promotion of a hobby that is just
fun...except to a few who live in a fantasyland of self-
promotion and self-importance, elevating themselves up
beyond all credulity. Many hobby activities have some form of
federal regulation and the government does really recognize
that recreation is important to its citizens. Why else would it
allocate treasury monies to maintenance of national parks,
using land that could otherwise be made profitable by sale,
trade, or commerce?

Some have a need to regulate Their version of "fun" as that which all "must enjoy." That's minority control. That's not a good thing. Dictatorship was never a good thing. Quit trying to dictate that the Old Ways were the "only" good ways.

> Are you saying that the League is somehow sacrosanct?
> What are you trying to lay down on all for "policy?" :-)

I said nothing at all about the League. I was defending Ed's
right to have personal opinions which might (or might not) be
the same as ARRL thoughts on a given subject.

I thought my message was clearly stated.

"Since Ed participates here in his personal time, there is no requirement
that his participation on rrap be related in any way to his RFI work, and he
is free to express his personal views of ARRL issues without any implication
that those views bear any resemblance to the 'official' ARRL position on any
matter whatsoever."

With all kind wishes for your progress towards understanding simple
declarative English.

>
>Many people thought the slaves would quit working after they were freed
>but many of them worked even harder.

Yeah, up until the point where the Welfare State was established.
Then half of the former Slaves put their hands out, had have been getting
their palms greased ever since -- to the disgust of the other half, who
could clearly see the disadvantage of a life of dependency. There is
nothing about being a particular race or color that makes people dumb
or lazy -- but treating them like helpless children will definitely bring out
the worst in those inclined to *be* dumb and lazy. I believe in assuming
the best of people, not seeking out the worst in them in order to assuage
any guilt feelings over the way they had been treated in the past. The
Welfare State was a bad thing for former slaves; the elimination of code
testing will be a bad thing for the state of CW usage in the future of the
ARS. History repeats itself.

Cecil:

Sure they did. The guilty liberals even created a Welfare State so
they wouldn't have to. Slavery was a bad thing; the Welfare State
was worse, since it sent the message that former slaves wern't seen
as able to contribute to society on the basis of their human ingenuity
and integrity. We got that completely wrong, and pay a high social
price for this mistake. The same will happen in the ARS, once the
code testing requirements are gone.

Val:

I believe you express some very valid concerns, and I have been
saying the same things for years. I find it interesting that Russia
is not going to eliminate code testing requirements from it's
amateur radio licensing system. The Russian people have always
been extremely ingenious and resourceful when it comes to
dealing with technology, yet they continue to demonstrate a
recognition of the value of amateur radio's simplest, most
effective, and easily implemented mode. However, the "handwriting
is on the wall" as far as code testing requirements are concerned
for the rest of the world, and only time will tell what the future of
on-the-air CW usage will be.

From the 1954 ARRL License Manual, Chapter 7, "The Amateur Extra Class License":

"The written examination consists of about 100 questions mostly on technical subjects but including several on regulations, and with numerous diagrams required. The questions are for the most part in the usual multiple-choice form.

The Federal Communications Commission has issued a study guide for the written examination consisting of 279 example questions. These questions appear on the following pages together with answers. It should again be emphasized that these are not necessarily the questions which appear on the actual examination, but are intended primarily to show the scope of knowledge required. In any event, persons intending to apply for the Amateur Extra Class license should use the material to follow in conjunction with thorough study of a standard text on radio such as The Radio Amateur's Handbook".

Well, a typical first go-round in an N2EY CW QSO goes something like this:

".....DE N2EY R TU CL UR 579 579 IN WAYNE PA WAYNE PA NAME JIM JIM BT RIG
HOMEBREW CW XCVR 100 W OUT TO INV V AT 35 FT BT HW?..."

Almost everybody understands that. But the lack of abbreviations is not new.

Back about 1956 there was a QST article called "Your Novice Accent". It
was so popular that it was sent to all new hams (or at least new Novices) for
many years after it was first published. One of the subjects addressed is
proper use
of Q signals and abbreviations.

--

It's a good practice for people learning the code to spend at least some of
their study time listening to the use of Morse on the ham bands. Tapes,
software and
other training aids are fine, but often the experience of listening to "the
real thing"
is a big help.

Yeah, Val, it's all pretty well a waste of on-the-air time. Or study time maybe, for those going for a license. These anti-code people have some really strange twists to their tails, and they are of a permanent set. Don't try to confuse 'em with facts, their minds (or whatever) are made up.

Of course! What do you think set the parameters of my
receiver? I had
SOME control over the IF bandpass, but it sure didn't go so
far as to be able to
close it down to 31HZ. For that matter, why would I *want*
to close it down to 31 hz and lose my CW copy also?
You're an ignoramus and that seems to be where you intend
to stay. Have fun.

You are totally out of touch. Just because one who
refused to take training
(not someone who never had the opportunity to receive the
training)
deserves to be refused help doesn't mean that is what will
happen to him. You're
the kind of person who would be more likely to do that.

Uh-hunh. And exactly what was it that attracted them to the
code?
Answer: THE LICENSE! Darn few were attracted to the code
just for the code itself, and you SHOULD know it.

Most of the Novices of my time were attracted to ham radio
because CW could be used as a *tool* for making radio
contacts. You seem to have allowed the means to an end to
become the end in itself, i.e. wagging the dog.

Then you were comparing apples and oranges. PSK31 was trying to work through
a 31 Hz filter. A fair comparison would have you trying to copy CW through
a 31 Hz filter. Why is that concept so hard to grasp? To directly compare
PSK to CW, you must use the same power and the same bandwidth.

I would have to agree that the morse code would also need 100% undivided attention from me also. There are alot of other things that I can do under the guise of "multi-tasking" though. Always have been that way.... parents thought I may have been ADD but it was just a matter of either I had alot going on in my mind or I just didn't give a shit about what they were necessarily were concerned with. Guess that goes for most teenagers eh? :)

I would guess if he didn't have that extra spare relay, he would have
insisted you just leave that wire jumper in long term.... I suppose the
time delay relay was to protect the tube finals from getting their cathodes
stripped by B+ before the heaters got them warmed up. Or so I've
heard.

I seem to live in a null of a local AM station WSNR 620KHz. Sounds like
not enough carrier to properly demodulate with an envelope detector. The
carrier must be getting canceled out, they have 8 or 12 towers. Don't know
if they have it adjusted right or not... I may live outside the area they care about.

Welcome to reality Dick, that's simply part of life! You are gonna find that in almost any organized group in some form or another. Should I be bitching and whining that I as a recent graduate of the fire academy, that I have had to go through 3 TIMES the amount of training that others in the fire service have had to go through when they went through the training 20 years ago? Hell no, I just grin and bear it and move on with my life. If the tables were turned that I was receiving less training that others years ago, you bet I would find a positive EFFECTIVE outlet to attempt change. Anyone can sit around and complain about "how things used to be," but that means absolutely nothing to the rest of normal society unless positive and usefull action is behind those words. i.e. have you ever written to the FCC or the ARRL or your senators or congresspersons about your feelings on the issue of ham radio??? Ever started a petition drive to elicit change? Do you help to teach others in the benefits of ham radio? Do you teach morse code skills? Ever worked with the media (print, or broadcast media) to promote ham radio in a positive light?

If you have done some or all of those things mentioned, then you probably have some or alot of the right to bitch. And your participation in those activities are GREAT.

Even though I am one of those low-life tech-cb'ers as I have seen us referred to as in these newsgroups and elsewhere, I have done all of those things except for the teaching of the code, since I am not fluent enough to teach others, at least not the way it should be taught, so I illicit the help of others.

I'd estimate the extra as being worth maybe equal to a 5 credit hour college class. Say twice that if you're an English major.

Doesn't mean anything. A test with a hundred easy questions is easier to pass
than
a test with 20 hard questions.

It is funny how some of those with whom I disagree end up saying that I only say what I say because I am an ARRL employee. The other version of the theme is that they will blame ARRL for what I say. In either case, it speaks volumes to the weakness of their arguments, because if they could say something more effective to counter my positions, they would. :-)

I have used the Phillips code in CW conversations for the entire time I have been a ham. I have never had a single person tell me that my sending didn't make sense or respond in a way that led me to believe they didn't know what I was saying.

Your imagining the worst about these new hams has taken on a new extreme.

How will you persuade new hams to learn and use Morse code if there is no test, Dick? By telling them that they won't find it worth learning because there is no test or by pronouncing tha all new hams are touchy-feely New Agers?

You and I would, Dick, but we chose to develop our Morse code skills to that point.

Most hams could not handle formal CW traffic under conditions where static or a failing band had made SSB unintelligible. The CW testing that the FCC has done to date has not resulted in most hams being skilled enough on CW to be able to use it reliably under the conditions that you claim justify its continued testing.

I really don't understand what is so hard to grasp about this concept.

If you read Part 97, it is not illegal to buy, own, build, or use Ham
equipment to receive Ham radio communication. The only thing that
requires a Ham license is to TRANSMITTING on Ham frequencies, same as

any other service.

No, if you resell a radio, you don't have to check if the buyer is licensed. It would be wise to inform the buyer that a Ham license is required to transmit on those frequencies, but it is up to the buyer to get the required license or to refrain from transmitting.

Now, I haven't read Part 97 recently, so if I am wrong, I would be most interested in the part of Part 97 or any of the FCC R&Rs that proves that I am wrong.

After 51 years you, particularly, don't know the CW abbreviations. Most CW ops of long tenure do. Many of them don't use many of them so as not to confuse the newer ops. I think they should, as a training thing.

> How are
> you going to force new hams to learn them?

And where did I say I was, Sir Troll? But even through your fog you should be able to discern that it would be helpful in the pursuit of CW.

You prefer to dump the dog onto a busy freeway. Cw is a valid,
useful communications mode
which was necessary for Novices to learn because it was their only
authorized HF mode, deliberately made that way by the FCC so that
they WOULD learn it. Nice job of ignoring reality.

No, I don't "must", YOU Must. I'm the practical guy, and you're the theorist,
remember?
I use what works, while you carp about it.
While you do the comparisons, and cancel the working mode in favor of the one
which can't find a way to make it through, I'll be on the air. You'll be sitting
contemplating mode failure.

So what's so strange about stating the facts? Facts proven clearly by history and personal experience? Did NCI appear out of the mist for no reason? Did the no-coded tech just happen along out of mid air? Dream all you want. When code testing is no longer in the picture, the vast majority of newcomers will skip it. Fact. They "dont have time" to learn "a ancient useless mode" now, what causes you to think that will change because the test no longer requires it?

Problem is, the hundred question test was the hard one. It had no nonsense VE questions and other fluff. What you got was all real test questions.

I think becoming a VE should require a separate test over nothing but VE subject matter, administered by the VE's without any FCC involvement. It would require no further action by FCC and thus no added burden. Would be easy to implement

That's being a bit liberal with today's tests.

That could have worked out, he could have had a relay sent by fast shipping for next morning arrival. The transmitter could have been turned on with the jumper in place, but whoever turned it on would need to wait the amount of time the relay normally took to time down before punching the HV on switch.

> I suppose the
> time delay relay was to protect the tube finals from getting their cathodes

That's the reason for the time delay, to protect that expensive tube.

If you happen to be located in a deep null that would explain it. It would be like you were almost out of range of the station. An array with that many elements would produce some deep nulls.
I rarely listen to AM these days, but for a time after the licensing change there were some real cruddy sounding stations out there. Particularly modulation problems, both over and undermodulating. And hum problems. As noted earlier, some of it may have been intended, for some particular "effect".

Your mischaracterization of what I say has certainly reached a new low, right along with Cecil's. Read it again, Ed. I said I hear lots of plain language CW QSO's these days with few newcomers using abbreviations. I conclude that because they're not being used, they are not known by newcomers, and some not-so-newcomers. Even here on rrap, a relatively new Extra class ham didn't know know many of them, and wanted me to send him a copy of an old list of abbreviations I told him that I had been given by an OT friend from many years ago. I scanned it and emailed it to him.

So all that equated to me "imagining the worst" about new hams. That one is right up there with Cecil's trolling "conclusions".

Unless Cecil is obfuscating again it surely will, since the PSK31 couldn't make it in its 31hz channel, in those conditions at the time. CW couldn't either, according to Cecil. He's leaning on Shannon, of course.

I'd agree too. Not all in one class, but the Extra material of the
1950s/60s
fell into a handful of different classes (DC, AC, RF, etc.) from a two year
associate program.

Cheers,

Again you are mistaken.

Before 1912, the frequencies we now call "HF" were considered all but
useless.
Pre-1912 "amateur" radio was done on wavelengths we would call "MF"
today. The hams of those days were mostly using wavelengths of 500 to
200 meters (600-1500
kHz).

> I assumed that was understood.

Doesn't matter - you're still mistaken.

100% Correct

> Now, I haven't read Part 97 recently, so if I am wrong, I would be most
> interested in the part of Part 97 or any of the FCC R&Rs that proves
> that I am wrong.
> 73 from Glenn - KG5UC

You are 100% correct. The discussion centered on the
supposed Radio Shack policy to not sell ham equipment
(HTs/transmitters/transcievers) to non-hams. No one ever
provided any validation that RS was not sellling to
anyone...licensed or not...as my example and others
stipulated above..

Additionally, this discussion periodically pops up when
someone suggest that it should be illegal to sell to
non-hams or for non-hams to purchase or possess
ham HTs/transmitters/transcievers.

Cheers,
Bill K2UNK

> > to learn Morse code after the code requirement is dropped is no
> > friend of Morse code.
>
> So what's so strange about stating the facts? Facts proven clearly by
> history and personal experience?

Let's look at YOUR facts that you believe supports your
statement above.

> Did NCI appear out of the mist for no reason?

The reason for NCI in NO way, except your own fantacies,
can be construed to inhibit, prevent, or discourage newcomers
from learning code. NCI exists to end code testing as
a requirement...NCI does NOT oppose code use or
learning code by newcomers. To learn or not should be
the choice of the individual ham.

> Did the no-coded tech just happen along out of mid air?

It has existed for over 10 years. So what? Was the nocode
tech created to inhibit, prevent, or discourage newcomers
from learning code? That was never part of the discussion,
comments, etc....except for the "sky-is-falling" code advocates
that demanded code testing rather as a souce of new code
users to avoid taking on the challenge themselves to recruit,
encourage and promote new hams to learn and use code.

> Dream all you want.

Dick's favorite line when he hasn't a shred of evidence
to support his fantasy.

> When code testing is no longer in the picture, the vast
> majority of newcomers will skip it.

Probably so...just as the majority (how much is vast anyway?)
skips it today. That doesn't mean there won't be a

following of new morse advocates...of course that number
of new advocates will likly be smaller given Dick's attitude
toward being a positive morse advocate and role model.

> Fact. They "dont have time" to
> learn "a ancient useless mode" now, what causes you to think that will
> change because the test no longer requires it?

Your problem...once again, is you are the lazy one who
wants government subsidies via a morse test requirement
to bring in future code advocates rather than doing
it yourself by example, marketing and recruiting for morse.

No cheers today,
Bill K2UNK

Any change in the rules for entry into amateur radio; any change which redefines the space available for the modes radio amateurs use effects every radio amateur now matter how long licensed.

> Fearless Leader does NOT rule. He attempts to intimidate, to
> bully others. Tsk, tsk, that cannot be done in a computer-modem
> environment-medium. Fearless Leader keeps on his quest just

> actually a part of all others' species.

There are folks who obtain licenses when they are in their eighties. They are hams. There are folks who obtain a license at fourteen as I did. They are hams. There are folks who have told us about a decades-long interest in amateur radio but who have done zip about obtaining an amateur license. They are not hams. Oh yeah--I don't Florida is a part of all other's species.

Dick, you tell newcomers that rote-memorizing 1000 Q&A is the easy way to pass
a ham exam. After your testimony, why would they do it any other way? Is
that really what you want?

You tell newcomers that CW will die without a code requirement. Why would
newcomers choose to learn a dying mode? If you can get enough newcomers
to believe your prediction, it may come true. Is that really what you
want?

Reality is that CW is a *tool* of radio communications, Dick. It is
not a religion, creed, or way of life as you seem to believe. You
want the tail (CW) to wag the dog (amateur radio).

If Dick is correct, CW is a dying mode. Why would any newcomer, listening to
what Dick is saying, choose to expend the effort to learn a dying mode?
Dick obviously wants CW to die as quickly as possible so he will be proven
right. Why else would he tell newcomers that CW is a dying mode?

Hello, all!

From the Pirate Radio newsgroup, always an interesting
place for an occasional visit, the following:

(The protagonists are "Dr. Slick" and "Blarg".
I've done some slight editing for line length.)

--

On 10 Mar 2002, Dr. Slick wrote:

>Hey!
>There is a loop hole in the FCC's rules. It is legal to broadcast
>without a license when the country is at war or during other emergency
>situations. All you have to do is show that you are in the process of
>applying for a license. An application with a pen on it on your desk is
>sufficient to show due process.
>
>Check out Title 47, sec 73.3542

And I quote, from CFR Title 47 Section 73.3542:

"Authority may be granted, on a temporary basis, in extraordinary
circumstances requiring emergency operation to serve the public
interest."

Also required is...

"Statement of facts which, in the opinion of the applicant,
constitute an emergency to be found by the FCC for the purpose of
this section. This statement must also include the estimated duration
of the emergency and if during an emergency or war declared by the
President or Congress, why such action, without formal application,
is necessary for the national defense or security or in furtherance of
the war effort."

So this transmission MUST have a DIRECT impact on the safety of
the people of the United States of America AND be in the interest of
public defense.

If, for instance, you had an emergency system, a communications
system, or whatnot which was destroyed, you may rebuild without
going through full process. If there is no emergency service available
in an area (such as a rural area), then one may be set up.

"Emergency operating authority issued under this section may be
cancelled or modified by the FCC without prior notice or right to

hearing. See also Sec. 73.1250, Broadcasting Emergency Information, for situations in which emergency operation may be conducted without prior authorization, and Sec. 73.1635, Special Temporary Authorization (STA), for temporary operating authorizations necessitated by circumstances not within the ambit of this section."

Sec 73.1250 states...

"(a) Emergency situations in which the broadcasting of information is considered as furthering the safety of life and property include, but are not limited to the following: Tornadoes, hurricanes, floods, tidal waves, earthquakes, icing conditions, heavy snows, widespread fires, discharge of toxic gasses, widspread power failures, industrial explosions, civil disorders and school closing and changes in school bus schedules resulting from such conditions. See also Sec. 73.3542, Application for Emergency Authorization, for requirements involving emergency situations not covered by this section for which prior operating authority must be requested.

(b) If requested by responsible public officials, a station may, at its discretion, and without further FCC authority, transmit emergency point-to-point messages for the purpose of requesting or dispatching aid and assisting in rescue operations.

(c) If the Emergency Alert System (EAS) is activated for a national emergency while a Local Area or State emergency operation isin progress, the national level EAS operation must take precedence. If, during the broadcasting of Local Area or State emergency information, the EAS codes or Attention Signal described in Sec. 11.12 of this chapter are used, the broadcasts are considered as being carried out under a Local Area or State EAS plan..."

So you see, this does NOT cover a commercial or noncommercial entertainment service.

I'd like to know the names, addresses and telephone numbers of the six attorneys your friend said agreed "that it would be defendable in court".

Your stance that pirates would WANT to be used by the FCC is out of line in your discussion. In that instance, portable EMERGENCY services as you are citing WOULD be covered, however anything other than emergency communications would not be tolerated.

Amateur Radio Operators have authority during emergency services for many reasons. Please see http://www.arrl.org/ and Karen's phenominal site at http://www.ares.org for more information. Here is a link to an article about the Virginia ARES folks ending their services at the Pentagon on 11/19: http://www.arrl.org/news/stories/2001/09/19/1/

Citing the above article: "Amateur Radio performed exactly as it was supposed to," [Virginia ARES Section Emergency Coordinator Tom] Gregory said. "We responded to the need to provide communications

where none were available." He said the Virginia ARES organization stands ready to jump in again "at a moment's notice" if the need arises.

I don't feel that your original message has the intention of discussing emergency services. The tone is that you believe the FCC will allow unlicensed radio stations in the guise of national security to be on the air, broadcasting music, chatter, or whatnot.

This is not the case, and any attorney who has an understanding of communications law would tell you the same.

Sorry to burst your bubble, bud.

Blarg!

You must if you want your observations to be scientifically valid.
Otherwise, your observations are worthless, like what I hear over
on r.r.a.a. "My 75m Hamstick works great."

You don't know why normal CW won't pass through a 31 Hz filter? Human hearing
needs at least the fifth harmonic of the CW square wave audio modulation to be
preserved. At reasonable CW speeds, that fifth harmonic won't pass through a
31 Hz filter and the result is extreme ringing rendering the CW uncopyable
by humans at normal CW speeds.

If you allow PSK to occupy the same bandwidth as CW, then redundancy can be
built into the PSK signal that will make it superior to CW. On a level playing
field, PSK has an advantage over OOK.

What you are doing, Dick, is bragging that your Ford will beat my Chevy in a
drag race. When I say I think my Chevy will beat your Ford, you retort,
"Not if I flatten your tires first."

There is no history upon which to base the facts, Dick. The future
is programmable depending upon what we choose to do with it. If
CW users promote the mode better than presently, it will increase
in popularity. It is certainly not going to increase in popularity
if hams like you keep discouraging its use by telling newcomers that
they won't choose to learn it without a code test.

Hi Val,

First, welcome to amateur radio, and especially to the community
of Morse lovers.

In my estimation, the use of Morse is little affected by the "CW
treaty". Use of Morse is a lot like recreational horseback riding.
We do it because it's fun, not because it's a particularly rapid or
effective means of communications.

> >"Decent equipment" will do at least a 250 Hz CW bandwidth, Ed.
>
> I wonder how many hams have 250 Hz filters in their rigs?

My Southgate Type 7 has that effective bandwidth from a combination of
xtal
and audio filters. My K2 has 250 as one of the programmed xtal
bandwidths, and
also has the audio filter.

Way back about 1971, when I was in high school, I had a Southgate Type
4 receiver, which had an IF filter using FT-241A xtals. Three for $2
from JAN
Crystals in Florida. Two versions of the Type 4 still exist, but the
original
1971 version is long gone.

> I have a 500 Hz filter; is my equipment indecent?

I dunno, what will it do if asked nicely?

You want a really nice 8 pole xtal filter to fool with? Center
frequency 440
kHz, bandwidth 400 Hz (I think), really nice skirt selectivity. One of
a kind,
tho.

Point is, nobody has to put up with poor CW receiver selectivity.

> Yes, which will make it an even better choice to change frequency instead of
> change mode as the first choice most of the time under failing conditions.

Sure - if/when we get the band. The fact that a case can be made for a
new band
at 60 meters because there are times when none of the others can be
expected to
do the job shows that changing frequencies may not always be the best
option.

If the no-code-test Technician class had not been created, the number of US amateur radio licensees would have decreased in the last decade.

You may argue that the no-code-test Technician class is "the entry class for amateur radio" but that is a concept of the ARRL machine of only a couple years back. The Novice class licensee was "the entry point" for decades before that, the ARRL ignoring the continuing decline of Novices.

The membership of the ARRL is still less than a quarter of all US amateur radio licensees.

How is the ARRL going to "lead" US amateur radio or even "represent" anything close to a majority of US ham licensees when it chooses to push Technician class licensees into the virtual "back of the bus" as second-class amateurs?

>Do you mean that you don't care to have it pointed out that you are not
>a radio amateur but only a bystander?

So is the FCC a "bystander" and they MAKE THE REGULATIONS
you must obey.

>Nobody going through current licensing procedures takes the same exams
>which I took so there goes that portion of your rant.

Aha...now begins a new tack into the wind...and a mighty wind he has.

Since no one can now go through the same tests that Herr Robust
took, they are therefore the "lesser" and "inferior." :-)

>I didn't undergo
>*any* rituals and hazing unless you'd like to consider the ROWF
>initiation.

Of course, Herr Robust was already "born to the manor," mighty,
noble, and so very Proud. :-)

>This is absolutely, with no room for argument, a chat room.
>Some of the biggest wind here comes from an individual who has no
>callsign, vanity or otherwise in the ARS. Now quit making an ARS of
>yourself.

Ah, yes, the old ploy "no one 'belongs here' that doesn't already
have a license!"

Oh my, such an old geas attempting to ward a spell. Herr Robust
behaves as an old witch badly in need of a spell-checker. :-)

Please take your whining to the FCC and demand that all
Commissioners and Staff take the amateur radio license test
before you "allow them" to make regulations that affect YOU.
:-)

Suggestion: Do not wear your shiny uniform when making such
an ex-parte presentation. I know it makes you look so very good
and authoritative in here, but it is DUMB when you have no real
authority.

Fearless Leader might consider trying to join the ranks of the
citizenry and becoming a human being. There's no real "test"
for that which can be hung on the wall and pointed to with ten

kinds of pride. It's a tough thing to go through, dumbing yourself down from the gods of Olympus. Persevere and you might make it...takes a lot of work, though, and I have no optimism that you will make it.

Let us know how your ex parte FCC presentation goes.

When I tried to copy CW while studying for my license, I ran across this problem. I got pretty frustrated when trying to make sense out it all. If a person is learning Morse Code, it really helps to have it be in the language they are using, not a new language (Morse code) with a second new language buried in it (cwspeak)

Yet another mistake, Cecil.

Did you forget Japan?

Or the very few other countries that allow amateurs to get HF licenses
without code tests?

Looks like it. Just like those two EE questions I posed stumped you.

Subject: Socio-Politico-Economic Factors in Ham Testing
From: "Valentine Germann" vgermann@socket.net
Date: 3/13/2002 9:37 AM Central Standard Time
Message-id: <u8urhdn0mvng0a@corp.supernews.com>

There is no liberty without rules and freedom is meaningless
without a legal framework that is agreed upon and enforced.

There is no true "freedom". Even in the most tribal of civilizations,
there are rules to be followed, even if they are not codified in writing.

Now, Ham Radio is not general aviation. You can't die
immediately from lousy operating.

You may not, but someone else might. That's the reason behind a great
number of our regulations...to ensure OUR operating does not hazard someone
else's life.

And the interference
and safety issues are, on a national level, small, though
they are important within the field. The main issues then
are the internal distribution of "air space" and the vetting
of new entrants. Not long ago the entry level cost was a
huge disincentive, long before the testing issue reared
its head. That tended to, er, we'll let that go. Today all of
this has changed and anyone, ANYONE, can get into the
tent and, in the words of one poster here, start "pissing."

A point to be made?

That is, it used to be expensive, one way or another, to
even START to be a Ham. Thirty years ago the entry level
cost, in 2002 dollars, was rather high, either in time or
money. And you had to go take a GOVERNMENT TEST,
administered by a GOVERNMENT employee, at a real
live GOVERNMENT FACILITY. You REALLY got the idea
that Ham Radio was SOMETHING!

It still is. We just smoothed the way to get there.

Last week, a friend of
mine "got into Ham Radio" (in about ten minutes at the
counter) for the princely sum of $119.95, at Radio Shack.
And the test he had to take, and which I will take in just
a few days, was administered locally and was pretty easy,
particularly since the Q's and A's were, er, KNOWN!

Yep...Some say the "test" is dumbed down. Actually, the tests are fine.
It's the policy of open question pools that weakens the system.

How is this possible and what does it mean for the future
of amateur radio?

Not much, really. It's been this way for almost 20 years now and the
service has grown significantly. However people actually know LESS about
what's going on inside the box than 20 years ago. Go figure.

Well, in ye olden days there weren't any repeaters, and
those devices, invented and installed by the WWII gen-
eration of Hams, out of a desire for effective mobile com-
munications, took the responsibilty for big power and
an expensive antenna away from the mobile operator
and shifted it to the club. This, combined with imported
solid-state gear that is mass-marketed, has served to
drop the entry dollar-cost all the way down to what
amounts to coffee money. That, combined with a vast
decrease in the amount of regulatory trouble it takes to
get a Ham Ticket, has REALLY changed everything.

More verbiage for little content. What was the point?

On the one hand, what can be "wrong" with all of this?
Isn't more ALWAYS better? Such is the American way,
I guess. If one million cars are good, 200 million cars
have to be 200 million times BETTER, unless they're
all trying to park at once, OR are mainly burning
petroleum we have to import from the volatile Middle
East. But I digress. Surely, surely, making it possible
for the maximum number of prospective candidates to
actually get a Ham license HAS to be good? After all,
growth is ALWAYS good, isn't it? And to remain static
or, horror of horrors, to DECINE in numbers, well, that
is surely DEATH, am I right, even when the base is in
the HUNDREDS of THOUSNDS?

But no, all growth is NOT good. Check out the definition
of cancer. The amateur radio bands are a "commons"
that can only be maintained when the community of users
can agree on a way to both exploit them, for communication,
while at the same time preserving and protecting them.
Efficient modes should be ENCOURAGED ACTIVELY,
particularly when you are making vast efforts to increase
the total numbers of Hams. To do otherwise is surely
suicide, slow or fast.

The problem here is that we already have copious numbers of repeaters,
digipeaters and translators, yet most of them are dormant save for the hours of
7-9a and 5 to 7p.

We don't NEED to adopt those "more efficient" modes. We aren't getting
the full use of what we have now. Ergo the constant barrage of "Little LEO"

programs and Part 15 programs seeking "our" spectrum.

But, it doesn't matter anyway does it? As Keynes said so well: "In the long run we're all dead."

Speak for yourself. I intend to live forever.

>If the no-code-test Technician had not been created, the number
>of US amateur radio licensees would have decreased in the last
>decade.

You speak this as if it really happened. How do you KNOW for a CERTAINTY
that it would have? Is this your NG-clairvoyance speaking?

>You may argue that the no-code-test Technician class is "the entry
>class for amateur radio" but that is a concept of the ARRL machine
>of only a couple years back. The Novice class licensee was "the
>entry point" for decades before that, the ARRL ignoring the continuing
>decline of Novices.

"Ignoring" the decline of Novices? I don't think so. The ARRL's focus
has been on the NCT for years with little if any on the Novice.
>The membership of the ARRL is still less than a quarter of all US
>amateur radio licensees.

You keep repeating this as if it means something, Lennie. Your point is?

>How is the ARRL going to "lead" US amateur radio or even
>"represent" anything close to a majority of US ham licensees
>when it chooses to push Technician class licensees into the
>virtual "back of the bus" as second-class amateurs?

In as much as a great number of NCT's are ARRL appointees and fill a great
number of club officer positions in numerous organizations, I can only assume
this is but ONE MORE "Lennie doesn't have a clue-isms".

Perhaps...JUST perhaps, If Lennie were an active licensee and participated
in some organized Amateur events, he'd know just how stupid he looks making
such assertions.

However he never will take that step, and will continue on making stupid
assertions that FACTS tend to disprove.

To Arms, Don Quiotxe, To Arms!~

Ya gotta love it Dave. Remember now,Lennie's supposed 1st wife was Jewish and each time he does his little Naxi name calling routine he honors her memory and displays the great love and affliction he must have had for her. I'm sure when she departed this world, he had her cremated in keeping then dumped the ashes in some forest near his home. ;)

Actually Dave, this is as big a bullshit story as only Lennie can dish out. Someone so enamoured with the 3rd Reich marrying a Jewish person?? Never happened, not in 1000 years

Steve Robeson K4YZ wrote

>There is no true "freedom". Even in the most tribal of civilizations,
>there are rules to be followed, even if they are not codified in writing.

I was, for a while, debating with a self-described Libertarian, who
has rather confused ideas about "freedom."

>You may not die from lousy operating] but someone else might.
>That's the reason behind a great number of our regulations...to
>ensure OUR operating does not hazard someone else's life.

Totally agree!

[concerning several matters, including a reference to an earlier
poster's contention that having people inside pissing, hopefully
out, was better than having them outside pissing in!]

>A point to be made?

It was made to the people it was intended for, I believe.

[Concerning my concerns about a loss of status for Ham
Radio within the general community due in part to the
ease of entry. I said Ham Radio used to be REALLY
SOMETHING and perhaps now isn't as much . . .]

> It still is. We just smoothed the way to get there.

Yes, it's a matter of degree, as is the impact of the
"smoothing." We all hope for the best.

> Yep...Some say the "test" is dumbed down. Actually,
>the tests are fine. It's the policy of open question pools
>that weakens the system.

Agree.

[What do recent, and some future, changes mean for Ham
Radio . . .]

> Not much, really. It's been this way for almost 20 years now
>and the service has grown significantly. However people
>actually know LESS about what's going on inside the box
>than 20 years ago. Go figure.

There's an article here somewhere for someone! I think
the changes have ALREADY been massive. Maybe in
a year or so I'll have sufficient background information to

write an authoritative piece.

[Concerning my comments that the repeaters and
very low-priced electronics have made the entry level
license much more effective at getting a lot of people
on the air and "into the tent, for better or for worse.]

> More verbiage for little content. What was the point?

I made my point.

[To my comments on growth and that it isn't always
a good thing, depending on what KIND of growth]

>The problem here is that we already have copious numbers
>of repeaters, digipeaters and translators, yet most of them
>are dormant save for the hours of 7-9a and 5 to 7p.

It's an "amateur" service so I think that's going to just be
the fact. Don't see this point at all. Piling up on the weekends
and weekdays is only going to get worse, isn't it, as the
service "grows"?

[To my comment that more efficient modes, like Morse, should
be ACTIVELY ENCOURAGED, by implication, by organizations
like ARRL.]

>We don't NEED to adopt those "more efficient" modes. We
>aren't getting the full use of what we have now. Ergo the constant
>barrage of "Little LEO" programs and Part 15 programs seeking
>"our" spectrum.

As an AMATEUR service there is no way that "full use" is going to
ever be achieved, in the sense that I assume you are intending.
People are at work.

[To my comment about Keynes and "living forever," which was
put in as a jibe at people who imply that things will take of them-
selves and all will somehow work out.]

>Speak for yourself. I intend to live forever.

Good luck with that!

Val

My ideas about freedom come from the freedoms guaranteed in
The Bill of Rights, freedom of speech, religion, press, assembly,
firearm ownership, speedy trials, probable cause, due process, etc.
Also freedom from unreasonable search and seizure, imprisonment
without cause, self incrimination, and excessive bail.

>second new language buried in it (cwspeak)

I can go along with that on learning the letters, but for the most part, the abbreviations are obvious. Considering that the tests are given as a typical QSO, learning some of that jargon will help you pass the test and will serve you well when you try your CW skills on the air.

Sending abbreviations is not the worst CW faux pas you will run across. Calling CQ at 5 wpm and getting an answer at 15 wpm will REALLY throw you!

>according to Cecil. He's leaning on Shannon, of course.

There are a few factors that can contribute to hearing the CW signal well enough to decode it, but not being able to decode the PSK-31 signal. The major factor is that under some circumstances, PSK will simply not work. Polar paths under disturbed conditions, for example, can contain a lot of sudden phase shifts.

I think Cecil had it backwards a bit. The *necessary* bandwidth of slow CW is smaller than 31 Hz, so the PSK-31 signal, operating a higher data rate, requires more power per bit than the slower CW signal.

There are plenty of reports in both directions, with some saying that the PSK-31 signal was inaudible but decodable, and others, under other circumstances, report what you have reported.

"Leaning on Shannon" is a pretty reasonable thing to do because it tells you what the performance can be under an ideal implementation. Both Morse-encoded CW and other encodings are sub-ideal in most cases.

Cecil, I have personally listened to some of the EME .wav files posted on the
web of ~10 wpm CW sent through a 25 Hz filter. Sounded hollow and mushy, but I
could easily decode the Morse, at a S/N of about 3 to 6 dB, by my ear.

>> I wonder how many hams have 250 Hz filters in their rigs?
>
>Anyone with an IC-756pro. :-) But I usually use 500 Hz.

And I like 2500 Hz for CW reception, personally. My mental filtering is reasonably good. I like to know what is going on around me.

Most modern rigs have keying whose rise and fall times is faster than necessary. This means that there is information available in the wider bandwidth that helps to define the start and stop of the element. I think that my mental processing is adaptive, using the full bandwidth to detect start and stop thresholds and then narrowing up on the element to help define duration. When one method of decoding fails,the other often helps fill in the missing data.

No, you don't see at all, Dick, at least not this point.

I don't think that 50% of those who have passed a 13 wpm or higher code test cold handle formal traffic on CW under conditions where SSB at the same power level was audible but unintelligible. Not at 13 wpm, not at 20 wpm or at 5 wpm. The number of hams who could handle that traffic under those conditions is probably a lot smaller than 50%. We are not talking perfection here, Dick; we are talking usable results.

>If the no-code-test Technician class had not been created, the number
>of US amateur radio licensees would have decreased in the last
>decade.

Absolutely correct, and that may be a major reason that the FCC is continuing
to move in that direction.

>You may argue that the no-code-test Technician class is "the entry
>class for amateur radio" but that is a concept of the ARRL machine
>of only a couple years back.

I don't know about the "ARRL machine," Len, but I see the NCT as the entry
level license because that is the license most people get to enter ham radio.

>How is the ARRL going to "lead" US amateur radio or even
>"represent" anything close to a majority of US ham licensees
>when it chooses to push Technician class licensees into the
>virtual "back of the bus" as second-class amateurs?

It is not my characterization of the NCT that is pushing them to the back of
the bus, Len. Your words, not mine, makes "entry level" appear to mean more
than "enters ham radio."

In your zeal to triumph over the "ARRL machine," your brush is painting rather
broad strokes.

Sending abbreviations using CW is a faux pas??? Really???

So when the ARRL prints a list of commonly used abbreviations in morse
code, they're encouraging poor amateur practice?

Good golly...

>
> You must if you want your observations to be scientifically valid.
> Otherwise, your observations are worthless,

And therein lies the gulf separating theory and practice. No wonder you come on so odd on the field of practice. In a specific setting when one mode works, and it happens to be the mode theoretically lesser in efficiency than the mode which won't work, you would just shut down the station and declare that Shannon decrees it isn't to be.

> like what I hear over
> on r.r.a.a. "My 75m Hamstick works great."

compared to what? A Heath Cantenna? My 75 meter hustler mobile antenna works well enough to allow me to check into the Missouri Emergency Operations Net on 75. I don't expect I could do that using a dummy load in its place. Does that make it "great"? Not to me, but maybe to someone who had been attempting to load a 'wet noodle'.
Another theoretical comparison that doesn't cover all the facts of a situation. I can see how some folks do believe their 75 meter Hamstick works great, even at single digit efficiency or less. "Great" is somewhat subjective, don't you think? As far as I'm concerned, there's no way a 75 meter Hamstick could be described as working great. But I have considerable experience using the B&W T2FD antennas (at work, not at my ham station) and one could easily describe them as "great", though I know they're not. But they allow quick frequency changes with no operator intervention and are certainly adequate for many circumstances.

No, that's YOUR argument. All I ever said was that CW worked in a set of identical circumstances where PSK31 wouldn't. I found that to be novel in view of your bragging about efficiencies of later digital modes. You, the theorist, would insist that the circumstances be altered, "flatten the tires" so that neither mode would work. I said nonsense. You use what works.

My comment had absolutely nothing to do with pride. It has become apparent you don't understand what you read.
>
> The long-timers went through the Hazing Ritual, therefore ALL OTHERS
> have to endure the same Hazing Ritual! :-)

As I mentioned, it has become apparent that you don't understand what you read. In my last post on this matter, I pointed that those entering amateur radio *do not* pass the same exam I passed. They cannot go through what you incorrectly call the same "hazing ritual". It blew by you since you were dead set in completing your rant.

> Change NOTHING, preserve the Status Quo! Keep everything the
> same so you can crow and cackle about your magnificent
> achievements under the beloved Old Standards!

Er....Len, changes have already taken place. You'll have to find a new topic to wail upon. It has never been easier to obtain an amateur radio license. At this point, even you could do it...but you likely won't.

> Whenever long-timers' Pride is codified into Part 97, your words will

> to be.

"Work" is not a scientific observation, Dick. "Work" is subjective. I see a lot of hams who say a 75m Hamstick "works" great. You say the CW ID works great compared to PSK31. That is not a scientific comparison. You must compensate the measurements for bandwidth, throughput, and power for it to be a scientific comparison. I have told you that if you take CW as close to Shannon's limit as PSK31 is, CW is likely to fail miserably.

> "Great" is somewhat subjective, don't you think?

You got it! Your CW ID Vs PSK31 comparison is very subjective because the CW ID on PSK31 has an extreme bandwidth advantage over PSK31. Someone said it has a power advantage over PSK31.

PACTOR II uses PSK and occupies approximately the same bandwidth as a fast CW signal. PACTOR II will run circles around CW even though PACTOR II is operated closer to Shannon's limit than fast CW. Please read this paragraph over until you understand it.

That's a falsehood, Dick. The circumstances were NOT identical. PSK31 was being squeezed through a 31 Hz filter and CW wasn't. What is it about that concept that you find so hard to comprehend?

> I found that to be novel in view of your bragging
> about efficiencies of later digital modes. You, the theorist, would insist that the

> nonsense. You use what works.

Dick, The PSK31 31 Hz filter is akin to flattening the tires on the Chevy. Unlike PSK31, PACTOR II is a serious mode that uses QPSK through a 500 Hz filter and it will run circles around CW.

In everything I've said, I have assumed 20wpm CW. I calculate the bandwidth
of a 20wpm CW signal to be considerably wider than 31 Hz.

I hear very little CW below 13wpm. In any case, everything I have said is
based on 20wpm CW. I have tried copying 10wpm CW through a 100 Hz filter
and it was impossible for me. The ringing from the last element had not
stopped before the next element started.

No, Len. I did not state that the FCC is "a" bystander. I stated that *you* are a bystander. We all know what function the FCC serves. You do not serve that function. You aren't anything to amateur radio.

> >Nobody going through current licensing procedures takes the same exams

That was not stated by me. I said: "Nobody going through current licensing procedures takes the same exams which I took so there goes that portion of your rant." It was in response to your absurd claim that I believe that all must do as I did. They don't and can't do as I did. I don't have a problem with that. You, on the other hand, will have to do as they did in order (this part breaks me up) for YOU to obtain an amateur radio license. Yep, darn it, you'll have to tote that barge, lift that bale, learn that code or surely fail.

> >I didn't undergo
> >*any* rituals and hazing unless you'd like to consider the ROWF

That stuff sounds pretty silly. I was a fourteen year old kid who passed the Novice exam in 1963. Over the years I've studied the material, taken the exams and passed the General, Advanced and the Extra. I went through no hazing rituals nor did I jump through a single hoop in the process. You've taken and passed which amateur radio exam?

> Ah, yes, the old ploy "no one 'belongs here' that doesn't already
> have a license!"

That was not stated by me. The meaning was inserted by you. You made your contemptuous comment regarding those holding 1 x 2 calls and their postings. I simply pointed out that much wind in this newsgroup is generated by one who hold no amateur radio call. That'd be you.

> Oh my, such an old geas attempting to ward a spell. Herr Robust
> behaves as an old witch badly in need of a spell-checker. :-)

Huh?

> Please take your whining to the FCC and demand that all
> Commissioners and Staff take the amateur radio license test
> before you "allow them" to make regulations that affect YOU.
> :-)

I'm not whining about anything, Len. The whining seems to come from you. You are the non-licensed individual seeking to have the rules changed for something of which he has never been and will likely never be a part. No one at the FCC needs to obtain a license unless that person shares your unbounded enthusiasm for amateur radio. Despite working for the Commission, that person will have to pass an exam exactly like the one you will need to pass in order to become a part of amateur radio.

> Suggestion: Do not wear your shiny uniform when making such

> optimism that you will make it.

Sour grapes, Len? I'd be embarrassed too if I was seventy years of age and had mere kids of 53 rubbing my nose in my failure to attain even the most basic of amateur radio licenses. Bet you could never climb that rope to the top of the gymnasium either.

You can't have it both ways, Dick. When potential American hams memorize English words, they are likely to have at least a feel for the meanings. It is virtually impossible to memorize words in one's native language without gaining some insight into their meaning.

>
>It is funny how some of those with whom I disagree end up saying that I only
>say what I say because I am an ARRL employee. The other version of the theme
>is that they will blame ARRL for what I say.

? The ARRL can be "blamed" for what it says directly and has said
over the last half century. Not a problem there at all. Lots of folks
"blame" the ARRL for what the ARRL does.

>In either case, it speaks volumes to
>the weakness of their arguments, because if they could say something more
>effective to counter my positions, they would. :-)

On the other hand, it is a very weak position to hide behind a staff
position as a paid employee and then claim "full independence" of
opinion. To attempt such "full independence" anywhere else for a
prolonged time would result in job termination.

Hans, another manager, is very touchy about titles and feelings.
Way back when I interjected a "Get Smart" TV show common
phrase "sorry about that, chief," he immediately jumped in and
said "that's Master Chief to you!" Some folks ain't got no humor.
Goes with being a Manager from my observation...

Well, Ed, there are two kinds of ham radio, aren't there? :-)

There's the amateur radio that the FCC regulates...and then there's
the "Real" ham radio in the world below 30 MHz...which the no-code-
test Technician class licensee cannot enter...and the "Real" hams
scorn and denigrate.

>It is not my characterization of the NCT that is pushing them to the back of

My words do that?!? Oh, my, must be selective amnesia at work
there, ignorning the outpouring from the "Real" hams. :-)

>In your zeal to triumph over the "ARRL machine," your brush is painting
>rather broad strokes.

Nooo, nooo, it be a very teeny brush highlighting the present words
of the ARRL and what they did NOT say less than a half dozen
years ago when they were still pushing the Novice as "entry level."

I say the ARRL is a publishing machine that also offers some
member services. If you say I'm "wrong," be my guest and log on
the ARRL website from outside and under someone else's account.

That's not "my brush" doing all that painting of ads for books and
products.

Membership in the ARRL is still less than a quarter of all US
amateur radio licensees.

Actually, there's only the one, Lennie. If we accept your "modifiers" as correct, there can be only one Amateur Radio.

The one YOU describe does not exist.

>I say the ARRL is a publishing machine that also offers some
>member services. If you say I'm "wrong," be my guest and log on
>the ARRL website from outside and under someone else's account.

I'd say that by not being an actively licensed Amateur Radio licensee, you are making some rather embarrassing characterisations of an organization with whom you are only "affiliated" with by surfing thier web site or harrassing Ed Hare and Jon Bloom over.

In no case are you speaking with any informed knowledge. You recite the names, but you can't tell the story.

>Membership in the ARRL is still less than a quarter of all US
>amateur radio licensees.

As long as it doesn't count you as a member, it can be 1/10th.

picked up his crayons and scribbled:

>Sour grapes, Len? I'd be embarrassed too if I was seventy years of age
>and had mere kids of 53 rubbing my nose in my failure to attain even the
>most basic of amateur radio licenses.

69, not 70. :-) The "mere kid of 53" is, from his picture, an overweight
middle-aged person who has to get others to climb his tower. :-)

Ah, back to the MUST HAVE THE LICENSE TO COMMUNICATE
ON THE INTERNET ploy again? :-)

I haven't taken any amateur radio license exam, so how does that
constitute "failure?" Ah, that is as in a stevospeak, such as Ham
Radio Magazine "failing" after 22 years of success as an independent
amateur radio periodical and selling it off to CQ Communications. :-)

>Bet you could never climb that
>rope to the top of the gymnasium either.

Another null since that wasn't done in my high school. I did climb a
rope in Army basic training, outdoors, sandy soil. Did all kinds of
athletic-type things and passed. Went on to climb all sorts of
things, including towers of 200 and 300 feet, but only one wooden
pole (used climber boot spikes and a belt, though). :-)

Oh, and in that Army communications assignment of three years,
we learned the proper way to run RTTY on HF on 24/7 DX circuits.
We used TTY as the order-wire, never used any OOK CW. That
was in the fifties, doing standard-procedure communicating that
was the same in all military branches on those long-haul HF
circuits. Then some self-styled civilian VIP g-stepped in barking all
kinds of stuff about "CW" wonderfulness in here and issued the
rationalization of CW order-wires on RTTY circuits of the eighties
were hot stuff and "State Department Procedure!" Oooo, wow!
From such an important 3rd World country in middle Africa, too
(1.2 million pop., major export cashew nuts)! Hot dang, big time
HF comm there! :-)

"Nose rubbing!" :-) Hell, you couldn't "rub anyone's nose" with
a security clearance paper and two KY-97's strapped on your
ample hips. Go lock yourself in the embassy basement shield
room.

Hey Slimmo, you watch them calories a bit closer and maybe
you'll reach 60 years. Who knows, maybe you can even climb

a tower all by yourself someday! I'm pessimistic about that... :-)

Why is it that the ONE administrative process the FCC get's PAID for by Amateurs is the ONE that gets screwed up?

(1) The bank has already told them that the money has been paid.

(2) determine that the application is filled right (a minimum wage high-school student can learn this task in about 15 minutes.) Task length, about 60 seconds for a slow reader. If it's not correct, "WIP" it and move on.

(3) See if the call sign requested is available. Again, about 60 seconds for a person of average reading/typing skills.

(4) Issue the document.

Am I missing something? At the most....five minutes per document? At present backlog, that's over 130 man-hours to clear.

FROM THE ARRL WEB PAGE

QUOTE:

FCC Continues to Probe Cause of Latest Vanity Processing Holdup (Mar 14, 2002) -- Efforts continue at the FCC's Gettysburg, Pennsylvania, office to get to the root of a vanity application processing anomaly that led the Commission to again put vanity processing on hold. No vanity applications have been processed this week. The FCC hopes to soon resume processing a remaining backlog of some 1600 vanity applications delayed as a result of mail problems last October.

UNQUOTE

How embarrassing. Sheesh

If one doesn't know the meaning of an English word and doesn't know the meaning of a Russian word, what is the difference? If you feel they are picking words in the question pool whose meaning they don't know and then using some form of association to somehow link the question and correct answer, they could do the same thing if the entire pool was in Russian.

How would this technique you feel people are using to pass their exams so they won't learn anything work if someone knew the meaning of every word in a question and the correct answer?

Actually Cecil, this is one of the few good points that Dick actually brings up once in a while.... As a licensed medically trained individual, I cannot be allowed to decide who deserves more treatment based upon a moral choice. Hate to admit it, but it is true....

I must, as legally required by law, to provide the care I was trained for. The only distinguishing factor of who recieves more treatment is under the guise of Triage. I am only allowed to make triage choices based upon the injuries or medical circumstances actually witnessed or diagnosed by me.

Now, after the scene has been cleared, and I am back at the station, or with firends or family that I might be able to vent or share this with, that is the time I can give my opinions or feeling about the situation.

What about Corporate Welfare? One form of this is these damned tax abatements that companies get. If corporations were to pay a very small, say 1 or 2 percent tax like the rest of us have to, the burden on us all would be less as opposed to soaking it from the working guy. What about all the other funding, and many other sources of capital corporations get from the governments?

(for the record I am not a left-winger, although republicrats seem to think there is only 2 parties or way of thinking. I would best be classified as a independant, in other words a free thinker)

For the last 50 years...questions as follows:

What is the unit of measurment for....
Current flow - Amperes
Electomotive Force - Volts
Electrical Resistence - Ohms

There's NOTHING more necessary than memorization
to "leanr" those questions. I did it as a teen in the late
50s. Did I know what the concepts behind it all were
and the why of Ohm's law? Not at all, but there was
no need to understand it to pass the test.

Did I go on to understand after becoming a ham...yes I
did....through personal interests, high school physics
class, high school electronics class, college, military
and a life long career.

I don't want to open a long winded discussion, but
just for the record...corporations pay all the same taxes
we do as individuals: Corporate income taxes, corporations
pay property taxes, and they often pay a host of unique taxes
individuals don't.

> What about all the other funding, and many other sources
> of capital corporations get from the governments?

Successful corporations recover all the money they pay in taxes from their
customers. Corporations essentially don't pay taxes - their customers do.

Dang! You outed me!

There are a few of us on here. Occasionally you may see a pop culture reference
imbedded in one of my posts, similar to what is done by the MST3K crew. Part of
the game is to recognize the source. "Bozo on the bus" actually derives from
two sources, of which FT is one. I'll let you puzzle over the other source.

My mother was a Bozoette at college, btw.

FT is alive and well, by the way. TV special was on PBS some months back.

Search your favorite engine - lots of great sites.

No, that's not true, Cecil. Third harmonic is adequate, but it sounds "soft".

>At reasonable CW speeds, that fifth harmonic won't pass through a
>31 Hz filter and the result is extreme ringing rendering the CW uncopyable
>by humans at normal CW speeds.

In other posts you say you assume 20 wpm CW. So 20 wpm is a "reasonable CW speed" to you. If it's so reasonable, why all the fuss from you about the 20 wpm test for so many years?

How much CW operating do you do at "reasoanble" speeds, Cecil?

Here are some numbers:

At 12 wpm, a dit and the space following it are ~200 milliseconds long. That corresponds to a fundamental keying speed of 5 Hz, and a necessary bandwidth of 10 Hz to send very soft dits. Include the third harmonic and we're up to 30 Hz
necessary bandwidth. Include the fifth harmonic and the code speed needs to reduce to about 8 wpm to fit into a 31 Hz bandwidth.
>
>If you allow PSK to occupy the same bandwidth as CW, then redundancy can be
>built into the PSK signal that will make it superior to CW.

Actually, PSK occupies a wider bandwidth. PSK31 does not use "pure" PSK for this reason - instead, it uses a mixture of PSK and OOK, set up so that the transmitter output goes to zero during phase transitions. This is specifically done to reduce the transmitted bandwidth, but it means that a PSK31 signal must be handled by linear amplifiers. A true PSK or FSK signal does not have that restriction.

> On a level playing
>field, PSK has an advantage over OOK.

"Level" in what way? Power, bandwidth, S/N? Immunity to various types of noise or fading?

The fact is that there was a situation where CW got through and PSK31 wouldn't. Widening the receiver bandwidth for the PSK31 signal would not have made the PSK31 signal work any better. In fact, it would be worse, because more noise would have reached the PSK31 detector.

Phase distortion in the signal path is the most likely culprit. Noise takes many forms, and simply assuming that Gaussian/"thermal" noise is the only problem
is short sighted.

"If it happens, it must be possible".

--

As for ringing in narrow filters used for CW, that is usually caused by poor filter design. Doesn't matter if it's DSP, xtal, mechanical, audio or even regenerative,
some designs ring and others of equal bandwidth don't. Price is not always a good indicator, either.

Most HF/MF transceivers manufactered for the amateur market for the past 40+ years are not very good for CW or other narrow modes. Besides lacking narrow filters, many models also lack an AGC off switch, good gain distribution, RIT, and a host of other features. Ringing filters are just another example.

Saying that Mode X will "run rings around" Mode Y without specifying all the conditions of comparison is the same as saying Antenna A "works great" without specifying the conditions. The pseudonymous "Kurt N. Sterba" is a famous for that sort of thing. You're beginning to sound just like him, Cecil - maybe the two of you are one and the same...;-)

That means you forgot about Japan. Typical shaggy-dog approach - spell out the details one post at a time.

Japan has had no-code-test HF licenses for decades. They use an interesting bit of logic to get around S25.5. They've also had quite a drop in the number of active hams (as judged by station licenses) since 1995 or so.

Part of learning the code is learning the abbreviations. Pounding out "LOCATION HERE IS WAYNE PA" at 5 wpm takes a bit longer than "QTH HR WAYNE PA" or just "QTH WAYNE PA".

> No, that's not true, Cecil. Third harmonic is adequate, but it sounds "soft".

Our opinion differs on that point, Jim. I do not think third harmonic
is "adequate". I have tried to copy 13wpm CW through a 100Hz filter
and just could not do it.

> In other posts you say you assume 20 wpm CW. So 20 wpm is a "reasonable CW
> speed" to you. If it's so reasonable, why all the fuss from you about the 20
> wpm test for so many years?

I just cannot please you guys. If I give examples at 10wpm, you guys say
that's not real CW. You say 20wpm is slow CW. Then when I use a 20wpm
example, you rag on me. Seems you select whatever code speed supports
your side of the argument. In any case, I was trying to choose a code
speed that would get the throughput of CW up in the neighborhood of PSK31.
Throughput is one of the terms in Shannon's Theorem.

> At 12 wpm, ...

Like I said, all my statements were based on 20wpm which still doesn't
equal the throughput of PSK31. In reality, I should have been using 50wpm
CW in the example to equalize the throughput.

> "Level" in what way? Power, bandwidth, S/N? Immunity to various types of noise
> or fading?

If I remember correctly, PSK has a 3dB S/N advantage over OOK at the
same average power level. Also, if I remember correctly, PSK31 has a
throughput of around 50wpm. Having to lower CW throughput to 20% of
PSK31's in order to make a point seems to be stretching it a bit.
To be a fair comparison, 50wpm CW needs to be copied through a 31 Hz
filter.

> The fact is that there was a situation where CW got through and PSK31 wouldn't.

A Corvette will outrun a Chevette - Apples and oranges. One can overhaul a
Chevette to make it better. One could overhaul PSK31 to make it better.

A fair comparison includes S/N ratio, power, bandwidth, and throughput.

> Widening the receiver bandwidth for the PSK31 signal would not have made the
> PSK31 signal work any better.

It would have allowed a different kind of PSK to be used that is superior
to PSK31. PACTOR II uses a wider PSK signal than PSK31 and it will run
circles around CW when comparing S/N ratio, bandwidth, and throughput.

>
>What would the ham population be without the nocode techs?

Nobody knows, Cecil - not even you.

The number of US hams was growing steadily for at least two decades before the FCC dropped the code test from the Tech back in 1991. It has grown since - but somewhat less steadily.

>If the FCC had done nothing, the ARS would be in decline.

How do you know? Show us some proof, or even some credible evidence.

>The problem will get worse in the future, IMO.

Why?

It is interesting to note that the elimination of the 13 and 20 wpm code tests had very little if any long-term effect on the growth of the ARS in the USA. I would not
be surprised if total elimination of all code testing had a similar lack of effect.

--

It should be remembered that in 1990 the ARRL BoD voted in favor of a nocodetest amateur radio license in its recommendations to the FCC. Also, the ARRL extends full voting membership to anyone with a valid US amateur radio license, regardless of license class or tests passed. A new ham has the same voting power as any old-timer. No second-class status, no "back of the bus".

No, but people can hold opinions based on reality-based considerations.

> How do you know? Show us some proof, or even some credible evidence.

It's an opinion, Jim, based on subtracting out the nocode techs.
I realize that's a broad brush so don't bother nitpicking it to death.

> >The problem will get worse in the future, IMO.
>
> Why?

e.g. Cellphones, computers, and future technology. When a ham radio
was the only game in town, e.g. Madisonville, TX in the 50's, it was
much more attractive than it is now.

I would have been really disappointed if you didn't get some reference in as to that sterling military career you seemingly had.

Yep, disappointed indeed. Once again, there Sgt Len, must be a dull life if all you have to fall back on is some clerk typist, excuse me some clerk relayist job you held in Korea was it? Wow, something to keep the grandkiddies asleep dazzling them with your war stories...

BTW, so far, I've found no one who has ever heard the phrase commie squad in reference to communications squadron. Must be a personal thing :)

You're never going to learn that compared to many, your service record is a tad this side of dull and duller, but then again, reading your posts for the past several months and having you accuse me of being someone I am not, it seems to fit your personality to a "T"

Poor whittle Wennie...all a thith cause da big bads mans are just picking on you tsk tsk GROW UP.

At ease SGT Anderson, disassemble your gun and polish that barrel really shiny now.

Yes, it is a part of the process. I was happy enough with the "Q"
signals, but the novel spellings were what was a problem. It reminds me
of what an old friend once said: "I have no respect for a person who
only knows one way to spell a word".

If I were to make a criticism of people who regularly use Morse code,
it is the tremondous variability in the spelling as regards the
abbreviations. multiple abbreviations were a nuisance for me

es=is
here=hr
Thanks=tks=tk

There are others, but you get the point. It's not that big of a deal,
but I would have expected more precision.

That's really bad, because "es" actually means "and". (The abbreviation derives from the American Morse code for "&", which is dit dididit.

> here=hr

That's what all the decent CW ops I know use! Been that way since way back - "hr" for both "hear" and "here". Context, man, context.

> Thanks=tks=tk

Ugh. TNX, nothing else.

Watch out for this one: "X" for "thank you". Derives from "TU" and running the letters together.
>
> There are others, but you get the point. It's not that big of a deal,
>but I would have expected more precision.

Not all who claim to be CW "experts" have the same skills or experience. Those from a traffic handling background are, in my opinion, the best.

And the same thing happens with voice. You'd expect that all hams using voice would know the standard alfa, bravo, charlie phonetics, and use them when conditions get tough, but I hear plenty of hams who insist on using confusing nonstandard phonetics for some reason.

There was a complaint on one of the sites (qrz or eham) about PSK31 using hams with huge "bragfiles" that take forever to receive.

Take a look at:

http://www.arrl.org/news/features/2002/03/17/1/?nc=1

Just put up today.

>
>What women would that be Len?? Oh that's right, the supposed wife who's
>religious heritage you defame with your infatuation with Hitler and his
>quest to eliminate all Jews from the planet.

In his pitiable little rage and unable to control himself or his other personalities, Adell has made a number of unwarranted and untrue statements. Those must be corrected.

First of all, I have absolutely NO desire to "eliminate all Jews from the planet." That is an outrageous statement, a total fabrication, a lie.

Second, I have NO "infatuation with Hitler" or any other fascist or dictator, living or dead. That is an outrageous statement, a total fabrication, a lie.

As one who has studied military history and technology, there are a number of familiar terms and titles that I have used, taken from the German land and air military, past and present. Regardless of one's religious or socio-political beliefs, the German military was a skilled and efficient force. History is ample proof of this.

History will also show that the second World War ended in 1945 and that West Germany and, finally, the united Germany, is now an Ally of the West, a long-time member of NATO. The old Germany of 1945 was defeated 57 years ago. Rage and hatred of the old enemy remains in many, even those who were never alive at the time...some of those use the old history (that they never lived through) as a rationale to vent their own personal frustrations over minor events.

>Poor Len..poor poor Len.
>I find no great joy in seeing that you would honor her memory the way
>you do..therefore you couldn't and never did (marry a Jew), so let's not
>pretend righteous indignation.

It might be an unresolvable theological argument concerning the applicability of only a civil ceremony "not being a 'correct' or 'true' marriage" but that is not a subject for this newsgroup. My second

marriage (to my childhood sweetheart) took place in a Protestant church many years later. My best man held W6MJN then, still does.

I don't have any "righteous indignation," only sadness that some perverse little minds are so warped with personal rage and frustration that they feel some "right" to impugn others, to insult others personally far from a subject area...all because they cannot get their way on a particular subject in a newsgroup.

I have a touch of sadness that some are afflicted with a need to assume different identities that are easily seen as false, then assuming righteous indignation at being caught.

I have come to accept some as having a quasi-religious belief system in a hobby activity the seems to feed on myths and exaggerations and self-defined importances. Those religious zealots cannot be appeased for their religion is their very life. They must win at all costs. Any manner of "winning" is permissible in their world.

>fabricate to try to bolster your position. If you didn't understand it the
>first dozen times I have explained it, I don't think it worth the time for
>either of us for me to say it all over again.

Improper response from the wrong page of the Manager's charm school manual. The correct response would be to remain aloof and let any "outsider" remarks lay without comment.

No paid employee of any private organization will remain a paid employee by expressions of full independence that includes negative criticsm of the employer. There may be disagreement over partial independence but that depends on the employer. Some employers are liberal and allow some independence. Some employers allow no negative criticsm whatsoever.

In this little dispute the employer is the ARRL. There is a de facto representation of the ARRL in a continuing presence in this news-group of one ARRL manager. The ARRL is nearly always presented in a "good light" even to "explanations" of "actual dispute behind the scenes" to somehow show the "democratic processes and the expressions of free will possible within the ARRL."

Incredulity arises among those adults who have been working for any employer. Those within an organization have direct experience of conflicting "insider" viewpoints where the evidence, to other "insiders," is based largely on the personal views of the "insider." This translates to the outsiders of an organization expressing justified skepticsm of all those "insider" comments.

From actual life experience on encountering "insiders," the "insider" may actually believe (to the core of their being) that what they do is noble, good, and true. That is no valid justification of the employer or the organization despite strength of beliefs.

The membership of the ARRL is still less than a quarter of all US amateur radio licensees despite the belief system repetitions of

the goodness, nobility, importance, or "representation" of the ARRL.

>I think the pattern of distrust of percieved authority is starting to become
>more clear.
>
>Don't worry, Len; Hans is not using mind control on you, either.

Redirection towards implication that negative critics are foolish or
ridiculous for their beliefs is not a weak argument, it is no argument
at all. It is simply a thinly-disguised bit of contempt.

Expressed contempt of non-members does not gain newcomers.

>>That stuff sounds pretty silly.
>
>No, the Capitalization makes it noble. :-)

No, the captitalization was meant as sarcasm, both for his ridicule of "lesser" (in his belief system) beings, past evidence of less-than-good-standard professional radio explanations, and general haughty almost-Prussian demeanor of elitist superiority.

"Oberst" is a german military title corresponding to colonel. "Herr Robust" is a clearly-sarcastic play on words that dates back two or three decades to point out stereotypical conduct (see the characterization by actor Otto Preminger in the classic motion picture "Stalag 17").

>Don't you know there is a difference between feeling proud and feeling Proud?
>Apparently...

Again, bad response according to Manager's charm school manual for public conduct. The proper response would have been to be silent for a period and then bring out calm, reasoned examples to the contrary which do not involve personal expressions of implied ridicule against individuals.

Ah yes, the spin..here it comes. BTW which Len personality is this
Krell or the real OLD GEEZER himself :) Better yet, is the Jim or Larry
in the Len personna? After all, the 3 of you all use the same
newsreader and ISP, right? That's your criteria of alternate personna,
right?? Moron!!!

>

History shows they lost. History shows that they were responsible for
the death of millions of innocent people. Proof positive that you are
as perverse as they were (the Nazi's). What next Herr Len??

>

OH I C now you really weren't married to a Jewish women. Well thanks
for the admission. That explains a lot. As to subject in the
newsgroup..lets see..AMA model planes..continuous military career
stories, professional radio careers and all in an AMATEUR radio NG.

>
> I don't have any "righteous indignation," only sadness that some

You, as the master debater, should be thrilled that there are so many
who have adopted your particular style. It should be a smile to that
wrinkly ol face :)

>
> I have a touch of sadness that some are afflicted with a need to
> assume different identities that are easily seen as false, then
> assuming righteous indignation at being caught.

As before Len, unlike you, I have NEVER assumed other personna. Again,
you can say anything you want, it proves conclusively you have no proof
as to anything to the contrary. It would seem that if you had 1 piece of

evidence you'd be the first to trot it out, but seeing is that all you have is a continually dull statement...I think the rest of the NG can see that you are liar and a fake..but then again, you already knew that. ;)

So troll away witless droll. If you want to think I was the King of England, so be it.

>

I don't have trouble with written items but I have a lot of trouble with a
spoken equation. It is some sort of disability. If someone gives me a fast
food list of more than three items, I have to write them down.

"None" is a rail response and is much too strong. I'm assuming that the major
majority of nocode techs wouldn't have bothered with a coded license. Based
on the thirty or so nocode techs whom I Elmered, I think that is a reasonable
assumption.

>as perverse as they were (the Nazi's). What next Herr Len??

Wrong again. There is no "proof positive" of my perversity. There
is only Adell's rage and frustration showing through again for not
being able to win previous arguments in this newsgroup. That rage
and frustration is evident from hasty typing and a continual use
of personal insults.

"Herr" is an honorific prefix meaning the same as the English-
American "Mister." It is in common use in Germany, Denmark,
Sweden, and Norway.

>> It might be an unresolvable theological argument concerning the
>> applicability of only a civil ceremony "not being a 'correct' or 'true'
>> marriage" but that is not a subject for this newsgroup. My second

>
>OH I C now you really weren't married to a Jewish women. Well thanks
>for the admission. That explains a lot.

Only one woman, not plural. Quite legal according to the Registrar-
Recorder's office. She died in 1964. Why must "Adell" continually
bring that up in this newsgroup?

>You, as the master debater, should be thrilled that there are so many
>who have adopted your particular style. It should be a smile to that
>wrinkly ol face :)

Anyone is free to use whatever "style" they wish. Except for the
pseudonymous who claim to be "others," everyone's "style" is
unique.

>As before Len, unlike you, I have NEVER assumed other personna.

I have used other screen names for log-on purposes to AOL but have
never attempted to disguise myself as someone else. Anyone who
has software that can unpack a "cookie" from any one of my screen
names will see my real name identical in all of them.

"Adell" is another case. He should consult with "jonathan" (who
conveniently disappeared) or the "activated NY National Guard

member" (who apparently has gone TDY far from any Internet
access) or perhaps with "Ronnie D" (who has suddenly surfaced,
not quite coincidentally as has been evident before).

A problem with trying to go "undercover" with a new personna is
the lack of self-control and awareness, particularly with the
highly self-centered. They "lose it" by using common,
identifiable words, phrases, and style. It's a dead giveaway.

>have is a continually dull statement...I think the rest of the NG can
>see that you are liar and a fake..but then again, you already knew that.

"Adell's" problem is the immature use of "the rest of the NG" as
if that were a qualifier for a personal insult. It is not. Such is
merely a word-game used by youngsters trying to intimidate.
Very poor technique in any newsgroup or BBS.

>So troll away witless droll. If you want to think I was the King of
>England, so be it.

? Why would anyone want to think that of "Adell?"

It is ridiculous to attempt insulting the English Crown in that
manner.

>If you say there Old man. Geezer heal thyself.

Everyone's physical body is self-healing to a large extent. That
is basic middle-school biology.

> I can appreciate the difficulty it took to say you were wrong in so
>many ways. It's a start.

This is another aberration of "Adell's" thinking...or rather delusional
thought processes (a more correct term). Those two quoted
sentences are another poor attempt at intimidation, too often used
by the immature in computer-modem communications to be
effective. Those people think they've originated the technique but
it is old and trite.

> middle-aged person who has to get others to climb his tower. :-)

You're as wrong on that as you are about most things having to do with amateur radio. This kid did about twenty trips up and down the 70 foot tower just last Autumn lowering the 40m yagi, installing new guy wire and installing a Hazer tram system. It appears that you really don't know what you're talking about, Len (you spry pup).

> Ah, back to the MUST HAVE THE LICENSE TO COMMUNICATE
> ON THE INTERNET ploy again? :-)

No, no, no, no. You only need to obtain a license in order to have many hams take your views much credence. You've blown smoke here for years without much in the way of support. You tend to lecture and pontificate. That attitude isn't going to win over hams who have been on the air for decades and I don't think you are apt to gain much support from those who are about to become hams. Who would go to a non-ham for advice about amateur radio.

> I haven't taken any amateur radio license exam, so how does that
> constitute "failure?" Ah, that is as in a stevospeak, such as Ham
> Radio Magazine "failing" after 22 years of success as an independent
> amateur radio periodical and selling it off to CQ Communications. :-)

I think that if you've professed interest in something for several decades and that after all that time you've never achieved it, one could consider that a stunning and remarkable failure. That little 5 wpm code test never had a chance to stump you. Your overwhelming fear of it kept you from even attempting something you wanted. Whatever bile built up as a result has been spewed here in the form of your childish outbursts at anyone you perceive as "acting superior" or in lashing out at the ARRL who honked you off about some article you wrote in the distant past. As an aside, Len, "Ham Radio" magazine did fail. It went under. It died. It is no more. It is defunct. It makes no difference that it was around for 22 years. It couldn't make it for the 23rd year.

> >Bet you could never climb that

> were hot stuff and "State Department Procedure!" Oooo, wow!
> From such an important 3rd World country in middle Africa, too
> (1.2 million pop., major export cashew nuts)! Hot dang, big time
> HF comm there! :-)

It's a great yarn except it simply didn't take place the way you've outlined it. Nobody "g-stepped" (just can't stay away from that Nazi stuff, can you?). Nobody barked. Nobody issued anything. Nobody used a term like "hot stuff". There was no "self-styled" civilian. I was born a civilian. Somebody did refute your mantra that government was not using CW anymore. As a matter of fact, in those years government was using a helluva lot of CW. Sorry it didn't conform to the Army way. We weren't in the Army and had need of doing it in a different way for a number of reasons. It chafed you then and obviously chafes you now. As far as your attempt to belittle the job I did and the place that I did it, it only demonstrates what a pathetic little man you are. Other than the differences between your tale and truth, you've got yourself an accurate and fascinating story there.

> "Nose rubbing!" :-) Hell, you couldn't "rub anyone's nose" with
> a security clearance paper and two KY-97's strapped on your
> ample hips. Go lock yourself in the embassy basement shield
> room.

Never used anything as dark ages as a KY-97. I've only worked in two embassies which had basements. I've never been exposed to anything called a shield room. Oh yeah--and your nose *was* rubbed. It is now being rubbed again. You know nothing more about amateur radio than you do about embassy commo procedures, equipment used by embassies or about my tower climbing ability.

> Hey Slimmo, you watch them calories a bit closer and maybe
> you'll reach 60 years. Who knows, maybe you can even climb
> a tower all by yourself someday! I'm pessimistic about that... :-)

...just another instance in which you've written something you know nothing about. Such utterings by you have become rather commonplace and, as Ed pointed out, are a pretty good indicator that you have run out of ammunition
.
Do you now have tower envy too?

Some see the glass half full. Then there's Leonard H.
Did you know that in some countries, it is mandatory for a radio amateur
to belong to the national radio society? Wouldn't that be nice--100%
ARRL membership.

Tell us, Leonard, what radio amateur organization has a larger
percentage of U.S. hams as members than The American Radio Relay League?

Let's see. I'm not German. You're not German. Ed isn't German. We
aren't actually IN Germany. While my surname is Heil, I have more
English blood than German. You must have forgotten your references to
"g-stepping" and the SS.

At least Ed has only implied ridicule, Len. There isn't any "Manager's
charm school manual for public conduct" so your comment is pure
Fantasyland. I'd think the calm, reasoned examples you believe to be
your due are cancelled when your diatribes have not been calm and
reasoned. You only expect "calm" and "reasoned" from others.

Tell us in a calm and reasoned manner, Leonard, what you propose to do for amateur radio. What will be your epitaph? How would you like to be remembered?

Yeah, and in some countries you can't criticize the govt., the national
radio org or have decent QSOs.

"U R 599 in outter slobvania, name is Boris, QTH is downtown Elbonia,
QSL via buro, bye bye de @@6*!^"

On second thought, I will take the USA and Canada, Separation of
Church and State, (ARRL and FCC), is a good thing.

ARRL leaves a lot to be desired, see http://www.ares.org for
how the ARRL will probably set Emergency Services back 20 yrs
by not exploiting a resource and trying to dictate to
the locals how to run their programs.

> Tell us, Leonard, what radio amateur organization has a larger

NCI or FISTS? DAMFINO, the ARRL is the only game in town to protect
Amateur Radio. It had better start promoting AR to the School Kids,
Whiz kids, Soccer Moms, Hot Moms and Dot.Coms if we want the ARS
to stay viable in 20 to 40 yrs.

Because no person I have ever met that was married to someone of the
Jewish faith so b latently shows such total infautaion with a group of
people that would have just as soon wiped them off the face of the earth
than spit. You don't fit the mold, except for that which probably grows
in your house.

I thought you stated it was due to newsreaders Len. Now it's
identifiable phrases? Get your clues in order Len. Which is it?
Newsreaders?? ISP's?? Phrases? That being the case you and the Troll
are identical..both obnoxious, both opinionated, although the Len
persona is more of an ass, but the Larry persona you present is a close
2nd. But since you say so Len, it must be true YES LEN

>e.g. Cellphones, computers, and future technology. When a ham radio
>was the only game in town, e.g. Madisonville, TX in the 50's, it was
>much more attractive than it is now.

One could always have played with the non-radio technology of the day without being a ham, Cecil.

A cellphone does not do what ham radio does.

A computer is no more high-tech for most people than a cell phone.

Ham radio IS the only game in town for someone who wants virtually unlimited license to personally experience a wide range of radio technology.

That is what is has always been for most hams. The fear that all new hams want to do is yak is, IMHO, no more founded than it always was.

I went to the site and looked through it. I was especially struck by
the childish response which Karen Johansen sent the ARRL. Why should
she or you object to the League's protecting its registered name and why
should it not act to prevent others from thinking that ares.org is a
site operated by the ARRL? I won't let facts or rationality stand in the
way of your rage at the League's audacity.

That's right, Martin. The growth we have is not enough. We shouldn't stop until every man, woman and child in the United States is a ham!

>the "Real" ham radio in the world below 30 MHz...which the no-code-
>test Technician class licensee cannot enter...and the "Real" hams
>scorn and denigrate.

I don't see two ham radios, Len. I have operated both above and below 30 MHz, and my work has taken me above and below 30 MHz. My biggest concern this week is 70 cm.

>>It is not my characterization of the NCT that is pushing them to the back of
>>the bus, Len. Your words, not mine, makes "entry level" appear to mean more
>>than "enters ham radio."

>My words do that?!? Oh, my, must be selective amnesia at work
>there, ignorning the outpouring from the "Real" hams. :-)

It would be pretty silly of me to be discussing something with you and continue that discussion by discussing the words of others. Can you really be offering that I have ignored the output of those that you are characterizing as "real hams?" Hey Dick, do you feel ignored? I think he is talking about you. :-)

>>In your zeal to triumph over the "ARRL machine," your brush is painting
>>rather broad strokes.

>Nooo, nooo, it be a very teeny brush highlighting the present words
>of the ARRL and what they did NOT say less than a half dozen
>years ago when they were still pushing the Novice as "entry level."

For such a teeny brush, you sure do wave it around a lot...

A half dozen years ago, the Novice was not the usual entry point into ham radio, the Tech was (+ or otherwise). ARRL has been promoting the Tech license as the best starting point for a long time; it gives one a lot more priveleges than the Novice did, and one could enter with or without Morse code.

>I say the ARRL is a publishing machine that also offers some
>member services. If you say I'm "wrong," be my guest and log on
>the ARRL website from outside and under someone else's account.

I have seen the entire web page, Len, and I believe that the vast majority of it is devoted to membership.

I log on to ARRL.org regularly from home, but why would I want to use someone else's account?

>That's not "my brush" doing all that painting of ads for books and
>products.

Books and products are important to ARRL for two reasons. They provide a lot of good information that hams can use to do hamming. The excess of revenues over expenses help fund guys like me, who don't raise any significant revenues. The alternative would be to have fewer guys like me, or ask members to pony up about $75 a year for dues. Most seem happy.

>Membership in the ARRL is still less than a quarter of all US
>amateur radio licensees.

Yup, math hasn't changed much since you said that yesterday.

Steve:

It may seem simple for you and me, but for the people doing it, it may actually be quite an arduous and perplexing task. After all, they most likely think and speak in jive "Ebonics," and resent the fact that they had to take a job in the first place, having been brought up with the notion that the world owes them a living because of things that happened to their ancestors several generations ago. Then there's the problem with them being constantly pregnant, and if not, then overweight by several times a normal body weight. Also, spending 7.5 out of eight working hours making personal phone calls and taking smoking breaks kind of puts a crimp on productivity. So you see, these people face working challenges you and I never have had to contend with, other than as supervisors of people with the same problems. However, the fact that they can't get the job done isn't their fault -- it is the problem of their superiors who aren't taking good enough "care" of "their people."

Cecil:

Well, none, axeually -- but their ancestors, who never chopped a lick
of cotton or pulled a single barge, all claim to be permanently owed a
living based on what happened to their ancestors of several generations
past. Now it is the hard-working, middle-class people (of all races) who
are the "slaves" -- who must have their wealth be re-distributed to those
who produce nothing out of their own choice, only because guilty liberals--
usually rich ones, have decided that that's how it should be for the rest
of us.

I think it's time for the hard working people of this country to take a
lesson from John Galt.

73 de Larry, K3LT

>Ryan, KC8PMX
>FF/MFR

I'm a solid Republican when it comes to Corporate Welfare. I believe
in it. I think the big corporations that create the jobs and produce the
goods and services that fuel our economy should pay absolutely
nothing in state and federal taxes. The notion that corporations and
businesses of all sizes don't pay any taxes is absolutely false, and
a popular misconception among liberals. The problem is that corporate
taxes are very high in some areas, forcing businesses to go elsewhere --
usually overseas -- in order to be able to operate at an acceptable
level of profitability.

If you think we have a problem because corporations aren't paying
enough taxes, then I suggest that perhaps we have too big and burdensome
of a government overhead on our society, making demands on the tax
base. Bottom line: People who produce wealth through their initiative
and ingenuity deserve all the tax breaks they can get. People who
sit back and let life pass them by with their hands out, deserve a
lesson in nature taking it's course.

Ah, but the comparison was between PSK31 and CW.

>PACTOR II uses a wider PSK signal than PSK31 and it will run
>circles around CW when comparing S/N ratio, bandwidth, and throughput.

Maybe. Why isn't it used for EME, if it's so good?

Can it be copied through a 200 Hz filter?

You say you "subtracted out the nocode techs". Without any qualifiers, that means all of them.

> I'm assuming that the major
>majority of nocode techs wouldn't have bothered with a coded license.

Not a reasonable assumption, based on how many new has DID "bother" with a code-tested license before Feb 14, 1991.

> Based
>on the thirty or so nocode techs whom I Elmered, I think that is a reasonable
>assumption.
>
The 30 or so that you know are hardly a representative sample of the more than 200,000 that have entered US ham radio via that license.

Fact is, there's NO way to know what would have happened if the FCC had let well enough alone in 1991. And there's no way to know for sure what will happen if/when the FCC drops all code testing. Which will probably happen shortly after WRC 2003.

But here's a clue: The number of US ham licenses has increased by less than 9000 since mid-May of 2002, despite massive reductions in both code and written testing. Most of that increase happened in the first year or so after the restructuring of 2000. I'm surprised the increase is so small. Way back when, I predicted that the total would exceed 700,000 before March, 2001, but that never happened.

We are approaching 100,000 Extras, though.

Here are some numbers to think about. These are the number of unexpired
FCC ARS licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of March 14, 2002:

Novice - 39,368 (decrease of 9,961)
Tech - 237,536 (increase of 32,142)
Tech Plus - 82,380 (decrease of 46,480)
General - 138,890 (increase of 26,213)
Advanced - 86,070 (decrease of 13,712)
Extra - 99,185 (increase of 20,435)
Total - 683,429 (increase of 8,637)

Sadly, Karen is right, this thing was handled by a complete lack of
tact which has caused great harm to Amateur Radio by turning a lot of
people off from ARRL. Louisiana Emergency Services were just beginning
to warm up to Amateur Radio, we have had a rough go here due to
the common perception of radio freaks ala Dukes of Hazard.

Why should
> she or you object to the League's protecting its registered name

In the beginning of SEAL ARES, INC. (we are also a non-profit org
domiciled in the Parish of Jefferson, State of Louisiana) we approached
Rick Palm, the officer we were directed to and he assited us and gave us
encouragement on our venture. Now Karen recieved a letter on this
matter
in a threatening manner instead of using a diplomatic touch which
would have achieved the purpose. We don't object but the ground work
should have been made clear from the start. First, each locality is
different and these differences are what should be first addressed. The
League should adopt a standard policy on its Logos and Such and then
put it out for the Community to see. (amateur radio community). Did we
(arrl)
do that, no, it just evolved until this happened. Legal standards
should
be developed and quality controls insisted upon. But up front!

and why
> should it not act to prevent others from thinking that ares.org is a
> site operated by the ARRL?

The site was one of the best sites on the WEB for ARES. ARRL blew their
chance when they acted like a bull in a china shop. ARRL had no
objection to the site years ago, why now. I researched the ACRONYM
"ARES" and found it in use by many other groups-most not even remotely
connected with Amateur Radio. BTW-go threaten them, it would be
interesting
to see that, maybe even be good entertainment, talk about a sense of
HUMOR.

I won't let facts or rationality stand in the
> way of your rage at the League's audacity.

I don't have have rage, I have disappointment.

OK, Hans, then by THAT "logic", the FCC should hold ALL vanity applications
until 31 December of each year just to make sure that someone's application
didn't get hosed by USPS in the process.

Lennie, I guess you haven't been doing the math lately, but even the people who passively tolerated your lying bile and "defended" your "right" to be a liar and fool are at ends with you.

Even the most liberal and tolerant of voices here are tired of you. But I can understand your need to be here...You probably PO'd Mrs. A with your King-Of-The-Hill crap years ago. I can understand her wanting to save SOME last vestiges of pride and self respect by keeping you at arms length in her waning years. Bravo for her.

People here may disagree with HOW I got toe-to-toe with you, but so far no one has disagreed with intent. (I am sure one or two of the anonymous posters will jump in...already discounted)

How does it feel to know that in almost EVERY circle of Amateur Radio you have humiliated yourself? NO ONE would want to be in the same room with you, let alone want to share a QSO with you on the repeater. Even the ONE Amateur Radio organization with which you hold some kinship doesn't want you! And when the guy who could fix it for you tried to help you, you rubbed his nose in your crap.

(L)ying (H)am-baiting (A)antagonist. That pretty well sums it up.

>Second, I have NO "infatuation with Hitler" or any other fascist or
>dictator, living or dead. That is an outrageous statement, a total
>fabrication, a lie

You are, again, caught lying. Your favorite adjectives are such as
"jack-booted", "thug", etc. Other euphimisms are rampant.

>As one who has studied military history and technology, there
>are a number of familiar terms and titles that I have used, taken
>from the German land and air military, past and present.

You take THESE terms because in your "studies" you know them to be of the
most offesnive, abusive and denigrating of choices.

I find that AS offensive as the "f" word, or making sexually suggestive
commetns about yo mama.

>Regardless of one's religious or socio-political beliefs, the
>German military was a skilled and efficient force. History is
>ample proof of this.

Obviously not skilled and efficient enough to get it's collective ass beat
by those decadent Americans and Brits.

>Rage and hatred
>of the old enemy remains in many, even those who were never
>alive at the time...some of those use the old history (that they
>never lived through) as a rationale to vent their own personal
>frustrations over minor events.

I seeeeeeeeeee.....since this all happend "way back then", and many of us
didn't "live through it", your use of offensive and inflammatory rhetoric from
that era is OK...Do I read that right?

>My best man held W6MJN then, still
>does.

Guess he can hold a call sign longer than you can hold a wife, huh?

>I don't have any "righteous indignation," only sadness that some

I am reminded of reading Exodus in the Laborers' Union hall while
supporting my education back in the days. At first I was ready to join
the Hagganah and storm the parapets and minarets, upon further thought I
became grandly anti-Semitic for a few days, then finally decided the

combatants deserved each other; not every problem in this world is mine. It has been said that the function of education is the creation of an infallible bullshit detector and this whole issue has mine going off big time.

First off, I am going to assume you mean AFDC when you say 'welfare' and I would suggest you look again. This was the classic Federal handout program and did indeed develop a constituency of 'advocates for the poor'. I was around for the early battles in Wisconsin led by current HHS Secretary Tommy Thompson - a very easy man to underestimate BTW. Now Tommy and Republicans in general are not above racial politics and did so; reform was sold sub rosa as a way to deliver the shaft to the niggers in Milwaukee, Racine, and Kenosha and to the gooks in LaCrosse, Eau Claire, and Wausau. No one wanted to point out that the welfare rolls were 92% Caucasian then and remain so today as for that matter does the state as a whole. I knew an old guy who worked in the county welfare office and was the one who got to deliver the word (and the reality) that you didn't make it to the 8AM Monday job-orientation, your check just got cut, and whatever the excuse I don't want to hear it; he had a grin on Tuesday morning that required turning sideways to get thru the coffee shop door. Welfare isn't the gravy train it once was and we stand around amazed the out-of-wedlock birth rate is dropping like a stone in the face of a rising fertility rate. As the ag boys long ago learned, pay for something and it will miraculously appear -- this ain't rocket science.

The reparations thing is symbolic (and stupid) but reflects several things. On one level, with Indians and Japanese getting coins, it don't hoit to ask. So we revive the Freedman's Bureau promise of '40 acres and a mule' and demand its commuted value since 1866 and the wonders of compound interest make it a tidy sum indeed. It is bullshit, Larry, and everyone knows it including the demanders. But as another Ayn Rand novel, The Fountainhead, points out the most unpopular man in the room is he who articulates what everyone else in the room already knows. We have built a PC trap that prevents it being discussed for what it is.

It is being discussed in fits and starts but the biggest element is simply economic reality: the money does not care about blackitude any more, politicians care less and less about blackitude as Asians and Hispanics become a factor. Rather than try to rehabilitate a sick culture, we just issue a few more visas or cut a bigger hole in the fence in Arizona. So the biggest part of what you are seeing is a real decline in the I Am a Black Leader biz and a few loudmouths pedalling like hell to reestablish their gravy train. That none of them could carry MLKs shorts -- his campaigns should be studied like Caesar's and Ghandi's -- is becoming increasingly apparent. The noise you hear is collapse.

That the culture in 2002 terms is sick is apparent but you and I are not going to write the book; that will go to some black professionals and it will read something like 'expect, nay demand, more of your males and quit excusing for them and enabling shitty behavior' plus 'anyone who says it ain't black to be smart and work harder gets his socks fed to him thru the

nostrils'. It is, of course, incumbent on companies etc. to properly reward those who respond as individuals not as group members and hang anyone getting skin color involved at all from the nearest convenient yardarm or lamppost. Corporations are economic golem that we have every reason and right to expect to act as economic golem, not as public nannies. Ain't nice but no one has ever been cured of dependence whether economic or alcoholic by being nice.

It will be interesting to see what comes of Hispanic (way too broad an adjective) immigrants in the US. As a people, the Mexicans we get here are a fine bunch. I will remember getting loaded with the minority affairs honcho at the U of Utah when the tube came on with something about Chicano and this bronze dude that looked like he was carved from Mt Rushmore (and had to be cruised by every gay west of Denver) said, "I hope I live long enough for us to say what we mean - Spanish speaking Indian". Well, we are now getting the chance.

The locals are well on the way to developing the support mechanisms to send their people to med school, law school, and even a few in engineering and in the meantime have damned near taken over roofing, siding, and concrete work in Omaha. Yes, watching Jose turn a Dodge Neon into a low-rider is somewhat off-putting and wheels sticking out present an interesting driving hazard but WTH. And I can get a really decent and heart-healthy meal at El Rinconcito Pupuseria y Restaurante on Thursday nite -- the classic immigrant eatery. Grandma speaks no English but cooks up a storm, mamacita does what she can, and the two kids take turns being chained to the cash register in case a gringo walks in. Tough on the kids but that is what second-generation immigrant kids have done for centuries. The only real problem they have is getting the kids to finish high school and that is being addressed right between the earlobes in no uncertain terms. They'll make it just like the other immigrant groups in South Omaha made it, it will just be 'Buenos Dias' instead of 'Jak se Ma'te'. I didn't understand the polkas in Polish or Czech and I don't understand them in Spanish. My loss.

Don't get hung up on the symbolic mice running through, Larry. There is an elephant stampede in progress.

Quoting from The ARRL Handbook: "CCIR and FCC recommend ... K=5 for fading circuits when using telegraphy for aural reception." K=3 does not function well for fading circuits and is therefore IMO not adequate for ham applications.

> > I have tried to copy 13wpm CW through a 100Hz filter
> >and just could not do it.
>
> I have tried to run a 4 minute mile and just could not do it, either. Doesn't
> mean it can't be done.

We are not talking about heroic performances, Jim. We are talking about comparing average hams using PSK31 Vs CW.

> >You say 20wpm is slow CW.
>
> More bull. Produce a post where I have said that, or anything close to it.

During just the past week you said 20wpm CW is not fast CW. Separating CW into the two major catagories, fast and slow, leads us to the logical conclusion that not fast equals slow.

> > Then when I use a 20wpm example, you rag on me.
>
> All I did was show the errors in your posts.

There were no errors in my post given the boundary conditions. You cannot copy 20wpm through a 31Hz filter.

> "If it happens, it must be possible".

Again, we are talking about average hams using PSK31 Vs CW, not one in a million freak occurrences.

> The throughput of PSK31 in the case cited by W0EX was 0 wpm. CW ran rings
> around it.

Not through a 31 Hz filter, it didn't. Don't tell me you want to cheat in order to make your point. Anything that was forced upon PSK31 by the design must also be forced upon CW for the playing field to be level.

> >To be a fair comparison, 50wpm CW needs to be copied through a 31 Hz
> >filter.
>
> Why? Under the conditions W0EX experienced, the PSK31 throughput was 0 wpm. If
> it happens...

But that was irrelevant. Dick was not listening to CW after going through
the PSK31 31 Hz filter. Apples and oranges. If Dick had been listening
to CW through the PSK31 31 Hz filter, the throughput would have been equal.

> >A fair comparison includes S/N ratio, power, bandwidth, and throughput.
>
> A fair comparison also includes real-world noise conditions.

Uhhhhhhhh Jim, the 'N' in S/N ratio *is* noise.

> Ah, but the comparison was between PSK31 and CW.

Not unless the CW was squeezed through the same filter as PSK31 and it
wasn't. The comparison was NOT between CW and PSK31. Listening upstream
is cheating.

> >PACTOR II uses a wider PSK signal than PSK31 and it will run
> >circles around CW when comparing S/N ratio, bandwidth, and throughput.
>
> Maybe. Why isn't it used for EME, if it's so good?

It was not designed for EME. It is superb for the application for which
it was designed.

There you go railing again, Jim. I already said it was a broad brush. I
don't even know how many nocode techs there are so how can you accuse
me of subtracting out all of them?

> Not a reasonable assumption, based on how many new has DID "bother" with a
> code-tested license before Feb 14, 1991.

I'm not counting the ones who went on to General, Advanced, and Extra using
the Tech license as a stepping stone. I'm considering the number of Techs who
didn't go on to Tech+. In my experience at Intel, only 7% of Techs went on to
Tech+ and no farther.

> The 30 or so that you know are hardly a representative sample of the more than
> 200,000 that have entered US ham radio via that license.

Sampling is done all the time where 350 voters are sampled to find out what
the entire voting population is thinking. There is always a margin of error.

> Fact is, there's NO way to know what would have happened if the FCC had let
> well enough alone in 1991.

There's no way to know for sure. There is always a margin of error. That's
because the future hasn't happened yet. However, given all the possibilities,
at least one is bound to be right.

> But here's a clue: The number of US ham licenses has increased by less than
> 9000 since mid-May of 2002, despite massive reductions in both code and written
> testing. Most of that increase happened in the first year or so after the

So am I. That's why I think the future health of the ARS depends on attracting
more potential hams, not trying to chase them away.

One can only wonder what training/knowledge you have refused, forgotten to
get, overlooked, didn't have time for, that would equate to being able to
save someone's life. Maybe one day you'll be looking up into the eyes of
someone who has knowledge you don't because you refused...as you are gasping
for breath and they are making the same value judgements you make, Dick.

I cannot see why Dick is under the impression that the above message would prove difficult for anyone, let alone a ham radio operator. Most children have played communication games with pig latin, etc., and anyone who's done that will be able to decipher most things such as the message above. Maybe people like Little Dick think that makes them really smart, who knows?

Dick, I am sure Cecil is toying with you much like a cat toys around with a dead, limp mouse. Take a look at most communication that takes place in chat rooms or instant messaging over the internet, won't ya? Ham radio has no corner on the market for using shortcuts in written language. Good grief. CUL

I don't agree with you that Karen was right. She threw a tantrum over a letter received from the ARRL. She replied in a less than mature manner, severed her organization's link with the ARRL and resigned from ARES. As I see it, the only people "turned off" to ARRL haven't thought about the reasons for the letter from the League.

The League will likely do that when you submit your plans for a web site based on its ARES program up front. I read the League's letter and did not find it to be the least bit threatening. By the way, every corporate entity I know of protects its logos and registered names. How would Coca Cola, Microsoft, The March of Dimes, The American Cancer Society or CQ Magazine have reacted?

> and why
> > should it not act to prevent others from thinking that ares.org is a

While Rick Palm may have known about the site, it is pretty clear that other League officials did not. I'll agree that you likely found other uses of the term "ARES"--probably something to do with rams at stud.

Do they use the League's ARES logo and did they launch a web site about
amateur radio emergency services?

> I won't let facts or rationality stand in the

Japan is an interesting case. Check out their license stats on

http://www.ah0a.org

The interesting numbers are what has happened to station license totals since the mid-90s. Not a pretty picture. New hams per year is way down. Do not be fooled by the huge numbers of operator licenses, because JA operator licenses never expire. JA operator license numbers are an accurate indicator of how many people have been issued license since the end of WW2, not how many hold them currently.

Also note JARL membership as a percentage of total hams.

>much
>divvies them up 50-50 vs phone/image and CW/digital.

Right now they are 100% CW digital, tho.

So the point is this: The proposal is based on the idea that the phone/image folks need a more space and the CW/digital folks can make do with less.
>
>Why is not it a stupid, ill-advised idea aimed at pandering to the CW-only
>crowd? Or the image-only crowd? Or the digital-only crowd?

Seems to me that it works like this:

- Carl sees digital as the future of ham radio, and reducing the space available to digital shortchanges the future. He also sees enormous difficulty in getting the rules changed in the future as the demand for digital space increases.

- The ARRL BoD sees more current and future need for phone/image space, and so seeks to meet those needs.

- I don't understand the use of terms like "stupid, ill-advised idea" and "pandering to the SSB-only crowd" if the desired result is a better future for the ARS.

>place.

As evidenced in Usenet posts!

Here's a list of "-X" abbreviations:

CX = Classic Exchange (operating activity using older equipment)
DX = distance = rare or foreign stations
FX = affects, effects
HX = handling instructions (used with formal messages)
RX = receiver

TX = transmitter
WX = weather

Maybe we should produce a whole list here.

1715. Germany DARC votes to support keep code Test

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-16 17:13:19 UTC
From: Bill Sohl <billsohl@mindspring.com>
Message-ID: <a6vuja$d2n$1@nntp9.atl.mindspring.net>
Source record: 37605

By a fairly narrow majority, members of DARC,
the Germany equivalent of ARRL voted to keep
their current code testing. The statistics are as
follows:

17455 DARC members (which is 33.8 % of all DARC members)
took part in a vote for or against keeping the CW test
for HF.

Of these, 1144 votes were invalid.

From 16311 valid votes, 8530 (that is 52.3 %) voted
for keeping the CW test in its current form.

47.7 % voted for abolishing the CW test.

The DARC (German Amateur Radio League) will respect
this vote as a member of the IARU.

If you are code test advocate you might think that's great.
If you think for a minute, however, you'll see how the
"vote" is extremely narrow...and (IMHO) the vote if
taken a year from now will get even closer, or even
go the other way. Additionally, this vote only influences
how Germany via DARC will "vote" within the IARU
process.

Cheers,
Bill K2UNK

>
> 73 de Larry, K3LT
>

You hit on a better question than you know re corporate taxes. Just who in hell pays them and what effect it has on the economy has been a subject of debate among economists forever. Most don't give a hoot anymore having decided that Flaubert's Law applies: taxation is like plucking a goose, the object is a maximum of feathers with a minimum of hissing.

Things like a property tax in most places can be justifed as more of a user fee, the plant gets the fire laddies and the benefit of the school system although either can be challenged either in theory or practice. To suggest that corporations and employers in general do in fact pay half of Social Security is simple political flatulence along with a number of other payroll taxes. Workers Comp is an interesting political trade-off, injured workers do get medical and a wage, the courts get cleared, and a social/economic purpose is served by required experience rating so that Attila the Hun gets no economic advantage over Dudley Doright. The interesting one is the corporate income tax.

A growing company actually can get away with little taxation because of accelerated depreciation but the real killer is the mature company spinning cash that cannot be sensibly applied to expansion in the industry. And cyclical companies can carry losses forward and back to average out taxation and incidentally provide a rich reward for the buyers of failed operations who keep the corpse propped up until the carryforward runs out. The cash-cow becomes a takeover target so it goes on an aquisition rampage and the chicken-feed company becomes the proud owner of a few hundred fast food joints that it knows nothing about running rather than return taxable dividends the stockholders do not seem to want. Even Enron is mildly attractive as a carry forward (it is due an amazing refund BTW, they were far more honest with Sam than they were with everyone else). Generally one does not like economic decisons based on taxes so in that sense we have failed.

The object is to encourage management to be honest, frugal, and prepared. When you in effect pay for about half of the excesses with tax deducts, it tends to dampen the enthusiasm for decent management and those watching managements for decency. And preparation is of less importance when stupidity has value. In a lot of respects the corporate income tax is corrosive if not cancerous.

Republicans seem to be enamored of 'capital gains' which is a word without meaning that was coined to avoid taxing the results of inflation but could be more easily handled by using the Fed's GNP deflator in asset sales. So we get golf courses etc. (drive in movies used to be popular) to pay the real estate taxes while we wait for land prices to go up and sell out to a developer. And the shoe pinches so we bellow 'Capital Gains!!!'

T'would also seem that if one really gave a damn about energy independence a tariff on imported oil would serve that purpose admirably rather than try to bail out Big Steel for the purpose of trying to pay the four retirees per worker that they are trying to do now. Aid the workers, don't aid some obsolete pile of assets. And if investment and saving are a problem, why not tax consumption rather than income? Value Added Taxes work well at this -- essentially they are a sales tax in which everyone collects it (not on exports) but deducts VAT paid on intermediate steps; imports are taxed at the border. So Bloomies pays VAT and collects it and remits the diff and the end-user gets left holding the bag.

The hard part, as the Steel Stupidity pretty clearly illustrates, is the tendency of governments, unions, and voters to attempt to enshrine the past.

Who cares? Removing the filter would not have helped PSK31 any. That's a fact,
Jack.

> Don't tell me you want to cheat
>in order to make your point.

Not me. I'm pure as the driven snow.

>Anything that was forced upon PSK31 by
>the design must also be forced upon CW for the playing field to be
>level.

But you don't allow the reverse to be true. The things "forced" upon CW you do
not permit to be "forced" upon PSK31. Hardly a level playing field.
>
>> >To be a fair comparison, 50wpm CW needs to be copied through a 31 Hz
>> >filter.
>>
>> Why? Under the conditions W0EX experienced, the PSK31 throughput was 0 wpm.
>If
>> it happens...
>

>But that was irrelevant.

I see. (somebody get the net)

>Dick was not listening to CW after going through
>the PSK31 31 Hz filter. Apples and oranges. If Dick had been listening
>to CW through the PSK31 31 Hz filter, the throughput would have been equal.

So the fact that CW worked and PSK31 didn't isn't relevant? Even though
removing the 31 Hz filter would not fix PSK31's problem? Hoo boy, that's a good
one.
>
>> >A fair comparison includes S/N ratio, power, bandwidth, and throughput.
>>
>> A fair comparison also includes real-world noise conditions.
>
>Uhhhhhhhh Jim, the 'N' in S/N ratio *is* noise.

Yup. I knew that in the fifth grade. "Noise" includes stuff like phase noise.
>
>> Ah, but the comparison was between PSK31 and CW.
>
>Not unless the CW was squeezed through the same filter as PSK31 and it
>wasn't. The comparison was NOT between CW and PSK31. Listening upstream
>is cheating.

No, it isn't - particularly if both modes are allowed to do it.
>
>> >PACTOR II uses a wider PSK signal than PSK31 and it will run
>> >circles around CW when comparing S/N ratio, bandwidth, and throughput.
>>
>> Maybe. Why isn't it used for EME, if it's so good?
>
>It was not designed for EME.

Neither was CW, but it's superb for EME.

>It is superb for the application for which
>it was designed.

Which is?

A membership organization is very similar to a trade-union organization. It
is not the job of the organization to "learn" what its membership desires.
It is the responsibility of a dues-paying member to either a) have full
trust in whatever decisions are made by their organization or, to b) be sure
to continuously advise the decision makers of their [the member's] desires.

>
> That is, if it were my organization and such a hot topic was on the

>

You speak as though you believe there is a "my" in the leadership of the
ARRL? The ARRL is not an "I" organization. It is a "we" organization. I
am confused, therefore, by your use of the "if it were my organization." It
is a matter of the ARRL leadership either being allowed to do as it pleases
(by a silent membership--as most trade-unions are I might add) or doing
things at the will of a majority voice in the membership. This is one of
the shortcomings of being a member in the ARRL--there are not enough
"outspoken" members to contribute to the will and direction of the ARRL.
The result, then, is an organization that moves at the will of a few in the
leadership. However, I might add that let the ARRL make a decision that
would really upset a lot of members and they would certainly hear about it.
Therefore, due diligence dictates that the leadership understand their
boundaries, limitations, and even understand what the majority of "active"
(read: those who care) members would really want.

>
> Isn't it true that no such thing has been done in many years?
>

I don't think I have ever been asked anything by the ARRL, as far as opinion. I have been sent letters requesting that I support something--I think I recently got one requesting my support for the ARRL's opinion and moves on the CC&R issue. I do not support the ARRL's position on the CC&R issue. I was not asked what my opinion is.

>
> No doubt this would be expensive but, hey, this is IMPORTANT, is
> it not? Once again, I find the lack of precise information here more
> than a bit disturbing.
>

I don't think it's disturbing at all. If you are an ARRL member and, if something is that important to you, urge the ARRL leadership to "go your way." Another more worthwhile effort, in my opinion, is to be a voice for getting more members and for getting more members to actively get involved in the ARRL's position. That becomes rather unpopular, but it's politics--so who cares?

>
> I know I'm an outsider and currently belong now to no amateur

>
> Am I just wrong about the above?
>
> Val
>

You can belong right now, to the ARRL--although your membership (if you are not a radio amateur) is a "voiceless" one in that you have no voting power in the ARRL...Ed, correct me if I am wrong on that. However, you may at any time write directly to the FCC, your congressperson, etc.

>
>So am I.

Well, we agree on something, then.

The lack of a flood of newcomers indicates that license and test requirements are
not holding back any significant number of would-be hams. So there is no reason to reduce them further. Obviously other factors are much more important, such as publicity and CC&Rs.

Next month it will be 2 years since restructuring. Compare the growth of US license figures from 2 years before restructuring to the growth in the 2 years since restructuring.

>That's why I think the future health of the ARS depends on
>attracting
>more potential hams, not trying to chase them away.

Absolutely!

Interesting bit of info, Bill. Thanks for posting.

But it raises all sorts of questions. For example:

- How many hams are there in Germany?
- How many are DARC members?
- Is there a nocodetest license there? If so, how popular is it?
- Was there ever a previous survey/poll/vote? If so, how did it go?
- Why were there so many invalid votes? Why were they declared invalid? What
would the result have been if they were included?
- How much influence does DARC have on how the German vote will go at WRC 2003?

I will for $25. Otherwise, I'm not going to waste my time.

> Your insistence on making everything binary is not binding on me.

I'm a digital engineer. Please stop ragging on me for seeing the world
in black and white. View the world in any manner you so choose but
please grant me the freedom to do likewise. CW that I can copy is
slow. CW that I can't copy is fast.

> Phase distortion on HF is a fact of life.

So is fading. :-) Funny how your argument turns and twists 180 degrees
depending upon which point you are arguing. Why is fading unimportant
while phase distortion is important? Because fading shoots down your
argument and phase distortion supports it?

> So the fact that CW worked and PSK31 didn't isn't relevant?

Not, it isn't to this particular argument. In the name of fairness, put
CW and PSK31 equidistant from Shannon's limit and see which one is best.
Allowing CW to use a wider bandwidth than PSK31 is comparing apples and
oranges. Allowing CW to use more average power than PSK31 is comparing
apples and oranges. Allowing CW to get away with a lower throughput
than PSK31 is comparing apples and oranges.

Why are you so afraid of comparing apples and apples?

True, but the analogy is faulty since the DARC vote
is binding on no one but DARC as an entity...and that
is only because they choose to do so.

Cheers,
Bill K2UNK

2003?

Sorry, I have none of those answers...except as speculation.
DARC probably has no more impact than ARRL does on
the US delegation.

Cheers,
Bill K2UNK

1739. Re: \Re: The tests that Real Hams took

I read everything, and all I have to say is that I thought that the ARRL took a pretty benign approach to the whole thing. Since ARES is trademarked, it is their word. Try infringing on a Disney trademark and see what happens.

Her response was rather inflamed, also. She probably should have waited until she cooled down from everything. I wonder what she would have thought if the ARRL was using an acronym that she had a trademark for.

Source record: 37637

In article <20020316020651.25849.00001473@mb-mw.aol.com>, k4yz@aol.com (Steve Robeson K4YZ) shouted and screamed after running out of Prozac:

>>Second, I have NO "infatuation with Hitler" or any other fascist or
>>dictator, living or dead. That is an outrageous statement, a total
>>fabrication, a lie
>
> You are, again, caught lying. Your favorite adjectives are such as
>"jack-booted", "thug", etc. Other euphimisms are rampant.

Those who act like SA deserve the insults they get...whether
they wear brown shirts or the white robes of the KKK.

>>As one who has studied military history and technology, there
>>are a number of familiar terms and titles that I have used, taken
>>from the German land and air military, past and present.
>
> You take THESE terms because in your "studies" you know them to be of
>the most offesnive, abusive and denigrating of choices.

Well, it's a good thing that a military branch of the USA decided
that one should not remain in their service. There is a very large
gap in Robeson's military knowledge and comprehension of
tactics and warfare technology, before his lifetime as well as
during. In warfighting, the Wehrmacht did very well against
larger odds and the Luftwaffe displayed skill and courage in
defending their homeland (their ace list is higher than any UK
or USA record). It is a pity that a former military serviceman
cannot separate his bigotry and emotionalism from military
professionalism.

> I find that AS offensive as the "f" word, or making sexually suggestive
>commetns about yo mama.

? "sexually suggestive commetns [sic] about yo mama?"

My mother passed away last February. That was my only mention
of her other than both of my parents being immigrants. Does
Robeson have some morbid fascination with my mother's death?

I've never even brought up classical cellist Yo Yo Ma.

>>Regardless of one's religious or socio-political beliefs, the
>>German military was a skilled and efficient force. History is
>>ample proof of this.
>
> Obviously not skilled and efficient enough to get it's collective ass

>beat by those decadent Americans and Brits.

...not without a great cost in lives on all sides. Perhaps Robeson
still thinks of warfighting as "Grand Sport" as if it were some
gigantic bowl game? He seems to have been only on sidelines,
yelling and shouting, his "warfighting" confined to a mad waving
of a pennant and fist-shaking.

> I seeeeeeeeeee.....since this all happend "way back then", and many of
>us didn't "live through it", your use of offensive and inflammatory rhetoric
>from that era is OK...Do I read that right?

No. There is no indication that Robeson has ever read anything
calmly or dispassionately or attempted to understand any post
that was not in total agreement with his already-prejudiced views.
That is evidenciary in his "replies" to others as well as the flood of
hate rhetoric directed against me in here...and privately.

>>My best man held W6MJN then, still
>>does.
>
> Guess he can hold a call sign longer than you can hold a wife, huh?

My wife is still alive and we are happily married. :-)

A problem with the emotionally-disturbed is that they cannot
comprehend what is written. :-)

> Such as the ONE day it took for eveyone to see through "Avery Fine",
>Lennie? You denied that, too. You were so intent on being a Putz under that
>screen name that you lost track of your lies and posted with your "LHA" at
>the end.
>
> Tried to deny it...got busted. Sheesh.

I have accessed ISPs through about 9 different computers and
8 other account holders in the last 6 years. All of them with the
permission of the account holders. Since six of those account
holders have AOL as their ISP, it is possible to log on incorrectly
as a Guest on someone else's computer. I seldom log on as
Guest on my own machine. :-)

"Avery Fine" was used as an AOL screen name by a friend of mine.
It was with permission from my early use on BBSs as co-sysop
with the pseudonym "Avery Fineman" (a play on words, 'a very fine
man' for the totally humor impaired). :-)

At no time have I ever disguised myself as another identity in a
newsgroup, especially this one full of emotionally-distraught,
frustrated amateurs. :-)

> Such as lying about being solely responsible for "sending or relaying"
>1.2 million messages and then getting ahnded your hat when the math didn't add
>up?

The math added up. I did have to show the work for another pseudonym's arithmetic education. Does Robeson need help with his arithmetic? Should I post a multiplication table for his education?

Not a problem. I've had to post the rules for complex number arithmetic for the benefit of a "mathematics lecturer" at a Hawaiian community college. A multiplication table is trivial by comparison. :-)

>
>Just curious, but what might that be?

I can't speak for Texans but can relate to northern Illinois of the late
1940s and early 1950s concerning electronics. High-fidelity music
systems in everything from recording to acoustics was a popular
non-radio electronics technology of that time. It was when "Hi-Fi"
came into being as a catch phrase, holding strong until "stereo"
replaced it about two decades later.

In the "radio" area of electronics of that time, television broadcasting
was just beginning to boom and the suburban to rural areas were
into a "DX" of sorts just to get a TV signal. There was a fair amount
of experimental picture projection building at a time when such
projection systems were barely out of the commercial labs. There
were the FM reception and purity of signal hobbyists of the music
system group, even the AM purists as a minority group wanting to
get the widest frequency range signal from local AM broadcast.
Radio control of models was just beginning at that time and model
hobbyists had to literally build everything from battery-powered tube
transmitters to rubber-band-powered "escapement" rotary actuators.

A few electronics hobbyists were getting started building their
own video cameras for closed-circuit TV use using electrostatic-
deflection pickup tubes, a relatively small group until vidicons
became available later. The latter required do-it-yourself
deflection coil winding.

Model railroading had a sizeable following with the beginnings
of relay logic control systems for large track layouts. There
were no digitial ICs to do that then and the few available
transistors were prohibitive in cost, vacuum tubes too simple
and large to be applicable to large gauges.

Photo-electric sensors seemed to be a sizeable electronics
experimentation area for many uses from simple entrance
door signalling to voice-on-a-lightbeam communications.

>> A cellphone does not do what ham radio does.
>
>The point being?

Cellphones can't work DX or win all kinds of certificates. :-)

>> A computer is no more high-tech for most people than a cell phone.
>
>I really doubt that.

There were no home personal computers in the USA in the
early 1950s...unless one reaches very far for an opaque
projection system designed to project a conventional sliderule
on a screen for classroom use (seen demonstrated in Chicago).
:-)

>> Ham radio IS the only game in town for someone who wants virtually
>> unlimited license to personally experience a wide range of radio technology.
>
>Agreed.

Oh? :-) Wouldn't it be more accurate to say "...to personally operate
using ready-built radios from high-MF to very low microwaves?"

>> That is what is has always been for most hams. The fear that all new hams
>> want to do is yak is, IMHO, no more founded than it always was.
>
>Agree also.

"Cellphones can't work DX." "Garage door openers can't work DX."
"Wireless baby sitter intercoms can't work DX." "Computers can't
work DX." "CB radio is trash, illegal, and #$%^&!!!" "FRS radios
can't work DX." All quotes from in here. It would seem that the
whole reason for being is to "yak" and collect wallpaper. :-)

>the entire voting population is thinking. There is always a margin of error.

You know that, I know that, major political parties know that, and
thousands involved in using polling results for decision-making
know that. The problem seems to be in the boundary conditions
wherein some unusual telepathic conditions rule. It may some
connection to "accuracy transcends speed." :-)

>> Fact is, there's NO way to know what would have happened if the FCC had let
>> well enough alone in 1991.
>
>There's no way to know for sure. There is always a margin of error. That's
>because the future hasn't happened yet. However, given all the possibilities,
>at least one is bound to be right.

The key phrase in absolutism of boundary conditions lies in "if the
FCC had left well enough alone." :-)

"Well enough" is the pre-conditioned boundary where the condition-
setter has already pronounced what is "good" and what is "bad." :-)

The FCC had, in 1990, made decisions based on citizen input and
was not swayed by the authority of a special-interest group. That is
given in NPRM FCC 90-53.

>> But here's a clue: The number of US ham licenses has increased by less than

In article <3C92AA1C.8E364922@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>You're as wrong on that as you are about most things having to do with
>amateur radio. This kid did about twenty trips up and down the 70 foot
>tower just last Autumn lowering the 40m yagi, installing new guy wire
>and installing a Hazer tram system.

Where are the images of this athletic achievement? Some have
already seen the "achievements" from Africa. Somebody else
on that tower there... :-)

>No, no, no, no. You only need to obtain a license in order to have many
>hams take your views much credence.

Nope. Heil's "credence claim" is only for Heil and even then he is only
using it as a reply device.

>You've blown smoke here for years without much in the way of support.

Nope. I gave up smoking some time ago. :-)

>You tend to lecture and pontificate.

...and Heil issues orders, lectures, sneers at others who don't share his
viewpoints. <shrug>

>That attitude isn't going to win over hams who have been
>on the air for decades and I don't think you are apt to gain much
>support from those who are about to become hams.

I wouldn't dream of trying to dissuade a long-time morseman. :-)

But on the second part of that sentence you were correct in
saying "you don't think." We agree on that.

>Who would go to a non-ham for advice about amateur radio.

Several have. I've tried to be obliging and have given them help
on their electronics knowledge. I don't know that any one of
them ever resented any of that help.

Unless the Universe changed very recently, amateur radio still
works by the same physical laws as all other radio service
radios. [surprising, but true]

>I think that if you've professed interest in something for several
>decades and that after all that time you've never achieved it, one could
>consider that a stunning and remarkable failure.

Heh heh heh...oh, my, Fearless Leader still sings that song!
Off-key, of course. He may need a paddling. :-)

>That little 5 wpm code test never had a chance to stump you.

That little NO WPM code test never had a chance to stump me,
either. :-)

>Your overwhelming fear of it kept
>you from even attempting something you wanted.

Oh, wow, Fearless Leader turned into Signal Freud, psycho of the
airwaves! :-)

No, Dottore Freud, there was no "fear" nor has the "want" ever
been close to strong for 49 years. Now go lay down on your
examining couch and analyze yourself.

>Whatever bile built up
>as a result has been spewed here in the form of your childish outbursts
>at anyone you perceive as "acting superior" or in lashing out at the
>ARRL who honked you off about some article you wrote in the distant
>past.

Heh heh heh.

>As an aside, Len, "Ham Radio" magazine did fail. It went under.
>It died. It is no more. It is defunct. It makes no difference that it
>was around for 22 years. It couldn't make it for the 23rd year.

Oh, my, you are REALLY resentful at some things, Dr. Freud!

Tsk, tsk, tsk...in trying to "get back" at me, you've now dishonored
Skip Tenney, the late Jim Fisk, Alf Wilson, Rich Rosen, Terry
Northrup and a number of staffers who were also licensed radio
amateurs!

Yes, you must think they were all "newcomers," brash upstarts
who could successfully start and continue an independent
amateur radio magazine in a different state away from Big
Brother!

>born a civilian. Somebody did refute your mantra that government was not
>using CW anymore. As a matter of fact, in those years government was
>using a helluva lot of CW.

...hell hath no fury like a morseman scorned... :-)

>Sorry it didn't conform to the Army way. We
>weren't in the Army and had need of doing it in a different way for a
>number of reasons.

State Department is not known for big-time radio communications
expertise OR innovation, sport. Heh, they couldn't find the passive
mikes in the Moscow embassy for eight years! After 1948 the whole
of the US military was not considering morse code modes for long-

distance HF communications in any branch.

That "your idea" (as you put it originally) somehow got translated
into "State Department Procedures!" That was bullshit then (1980s)
and is still as stinky for professionalism in radio communications.

>It chafed you then and obviously chafes you now.

No. Dr. Signal Freud is chafed and scratching, wants everyone
to tell him what a great big pro gubmint communicator. <shrug>

>As far as your attempt to belittle the job I did and the place that I did
>it, it only demonstrates what a pathetic little man you are.

Yes, isn't it awful that no one can recognize your halo and the
rays of truth and glory eminating from your beautific presence?

>...just another instance in which you've written something you know
>nothing about. Such utterings by you have become rather commonplace
>and, as Ed pointed out, are a pretty good indicator that you have run
>out of ammunition

Poor baby, got hit by stray test-firing rounds, did you?

Do you want to lock and load yet? So far, you've only been dry-firing,
madly clicking the trigger.

If US ARS hams were allowed to "vote" in a popular vote on
their choice of to keep the code or not, they would probably
also vote to keep it, just as they have in the past. Too
bad we are not democratic like Germany, but need the
Newington Crowd, the FCC, and the influence of a small bunch
of Morse Terrorists to do our deciding for us.

>of Morse Terrorists to do our deciding for us.

OK, Clay...I am going to ask you to explain this one.

First of all, what do you mean we are not "democratic" like Germany?
Thier Amateur organization voted, just like ARRL does, and they acted
accordingly.

The ARRL may not have held a specific "election" on it, but they certainly
DID respond to the voiced opinion of the majority of correspondents on the
matter...If they had NOT, the ARRL would still be, I believe, staunchly
pro-code test.

That they simply decided to "not oppose" any provision to drop code
testing at the international level was the path of least resistance to
accomodate the desires of the membership.

Secondly, what "Morse Terrorists"...?!?! The code tests have already been
pared down to the minimum generally considered to be the "minimum" by
convention, and the WRC seems to be headed towards deletion of S25.5 as it
pertains to code testing.

Lastly, the last several FCC NPRM's on the matter have demonstrated a
growing "popular opinion" that code testing should be deleted or at least
minimised, which HAS happened.

The Government put it up for discussion...the people responded, they (th
feds) acted accordingly. Likewise, the League has responded in a manner
consistent with the majority opinion of it's members.

Seems to me that the system has worked just like it's supposed to. Slow,
but appropriately.

73

Steve, K4YZ

PS...All of this in the light of day...contrary to one antagonist's opinion that there is some "back room lodge hall" impropriety.

Considering he's a product of the 40's and 50's, I am sure the "duck and cover" mentality prevails. I am also sure it comes from always being a day late and a dollar short with his "peers" at the professional level.

He has all the time in the world NOW to impress us with his "prowess"...Too bad he didn't do that when he was "on the job"...Perhaps his name would be a bit more popular in professional radio circles than a few by-lines in a defunct Amateur Radio magazine.

Some of our common abbreviations and prosigns derive from American Morse and the "number code" abbreviations used with it.

Best known are 73 and 88. But there are others. For example, the "end of QSO" prosign "dididididahdidah" (usually rendered and SK or VA with the letters run together) actually derives from the American Morse for "30" meaning "end of work".

I think there might be much more to it. Len's anti-social behavior
extends to anything which smacks of tradition. He's also suspicious of
anything which purports altruistic motivation.

The DARC vote in no way binds Germany's
position at WRC. All that DARC has established is
that within the IARU, DARC will take the position to
retain code testing.

> but need the Newington Crowd,

The last ARRL "survey" came up with almost the same results
that the DARC "vote" did...and that was in 1957.

> the FCC,

The FCC is charged with listening to ALL input from
both ham and non-ham...and, regardless of that
input, the FCC then makes a decision based on what
the FCC believes is in the best public interest.

I used "Avery Fineman" 14 years ago as sysop on a BBS. The Internet went public eleven years ago.

At no time have I ever attempted to disguise myself as someone else in the body of a message on AOL. AOL's screen names are not callsigns. AOL allows up to 7 screen names per account holder. I thought that Ratman knew this...

Poor baby, all that Radio Kop hate and rage is eating him up, no ability to keep recent history in order or do arithmetic. Tsk, tsk, tsk...

I made mention of it in here briefly.

I have made NO mention of cellist Yo Yo Ma.

> However you know what I was trying to realte. If you don't you're more
>ignorant than I initially assessed.

I have NO idea what you are trying to "realte" or "relate" to. You are confused again. Lay off the sauce.

> And YOU earned a CIB from your radio shack in WESTPAC, Lennie? Uh
>huh.....

I served in the Far East Command 1953 to 1956. The term "westpac" had not yet been coined/created. "FEC" was the proper acronym then.

Here, use my ASN of RA16408336 and go use some FIA excuse and see for yourself.

Then, to be fair publish your own illustrious war record...especially why your military service was terminated.

Make a website honoring yourself, give yourself medals and geegaws, exaggerate the truth as in here. Keep it off the newsgroup since nobody really cares about your marine days, do they? It is not an amateur radio policy subject, is it?

> Still doesn't accont for YOU "pretending" to be someone else or denying
>that YOU were the author when you signed your own name to it in a fit of
>forgetfulness as to whom you were pretending to be.

AOL screen names are not absolute identities. AOL allows each account user up to 7 screen names. I have never attempted to

disguise myself as another person in the body of a message.

>>tower just last Autumn lowering the 40m yagi, installing new guy wire
>>and installing a Hazer tram system.

>Where are the images of this athletic achievement? Some have
>already seen the "achievements" from Africa. Somebody else
>on that tower there... :-)

If I didn't know better, I would think trying to discuss Africa is an attempt
at misdirection. :-)

>>No, no, no, no. You only need to obtain a license in order to have many
>>hams take your views much credence.

>Nope. Heil's "credence claim" is only for Heil and even then he is only
>using it as a reply device.

I think Hans makes more use of his license than to reply to you on rrap.

>>You've blown smoke here for years without much in the way of support.

>Nope. I gave up smoking some time ago. :-)

Now, we DO know better. This is a blatant an attempt at misdirection as I have
ever seen! :-)
>But on the second part of that sentence you were correct in
>saying "you don't think." We agree on that.

More misdirection, unless you truly believe that he is not capable of thinking.
The fact that he can string words together in sentences, though, would make
that a rather shaky argument.

>>Who would go to a non-ham for advice about amateur radio.

>Several have. I've tried to be obliging and have given them help
>on their electronics knowledge. I don't know that any one of
>them ever resented any of that help.

Nor should they. Most of what I know about electronics technology came from
the teachings of non-hams.

>Unless the Universe changed very recently, amateur radio still
>works by the same physical laws as all other radio service
>radios. [surprising, but true]

Why would you be surprised to know that Amatuer Radio works on the same physical laws as the rest of the Universe? I don't think that most people would be surprised; I am surprised that you are.

>Heh heh heh...oh, my, Fearless Leader still sings that song!
>Off-key, of course. He may need a paddling. :-)

Shame on you, Len. That is an off-topic subject. There are other newsgroups for that sort of thing!

>That little NO WPM code test never had a chance to stump me,
>either. :-)

You cannot supply any proof that you never took and failed a ham exam, Len. I think it only fair that we hold you up to the same standards of proof that you demand of other posters. We have only your word, so we can presume that you could be lying.

>>Your overwhelming fear of it kept
>>you from even attempting something you wanted.

>Oh, wow, Fearless Leader turned into Signal Freud, psycho of the
>airwaves! :-)

It is a bit odd that someone would be interested enough in ham radio to have written articles in ham magazines and typed volumes of posts. Reasonable people will know that something is going on...

>>Whatever bile built up
>>as a result has been spewed here in the form of your childish outbursts
>>at anyone you perceive as "acting superior" or in lashing out at the
>>ARRL who honked you off about some article you wrote in the distant
>>past.

>Heh heh heh.

Hmmm, what can we infer from this titter of laughter instead of Len's actually addressing the point raised?

>>As an aside, Len, "Ham Radio" magazine did fail. It went under.
>>It died. It is no more. It is defunct. It makes no difference that it
>>was around for 22 years. It couldn't make it for the 23rd year.

>Oh, my, you are REALLY resentful at some things, Dr. Freud!

Misdirection again, Len, turning his point about ham radio back onto some imagined impression of his resentment. Did you somehow develop Freudian powers since you criticized him for having them? We seem to be oscillating here a bit, Len.

>Tsk, tsk, tsk...in trying to "get back" at me, you've now dishonored
>Skip Tenney, the late Jim Fisk, Alf Wilson, Rich Rosen, Terry
>Northrup and a number of staffers who were also licensed radio
>amateurs!

Now you are telling people that a simple statement of fact that Ham Radio is defunct dishonors those people. In doing so, you have added a lot of your words to what he said...

>Yes, you must think they were all "newcomers," brash upstarts
>who could successfully start and continue an independent
>amateur radio magazine in a different state away from Big
>Brother!

I didn't see the word "newcomer" anywhere in his post, Len. You are building a house of cards, then pointing fingers and saying that Dave stacked them up.

>No. Dr. Signal Freud is chafed and scratching, wants everyone
>to tell him what a great big pro gubmint communicator. <shrug>

Wasn't his name Sigmund? And why do you think Dr Freud is concerned with what is said on rrap? Freud has been dead for quite some time.

>>As far as your attempt to belittle the job I did and the place that I did
>>it, it only demonstrates what a pathetic little man you are.

>Yes, isn't it awful that no one can recognize your halo and the
>rays of truth and glory eminating from your beautific presence?

You forgot the capitalizations, Len. And you seem to be the only one who sees Dave asking for people to worship him. The rest of us still see him as a mere mortal. I am not a psychologist, so I can't really tell what that means, but reasonable adults can come to some sort of conclusion, I am sure.

>>...just another instance in which you've written something you know
>>nothing about. Such utterings by you have become rather commonplace
>>and, as Ed pointed out, are a pretty good indicator that you have run
>>out of ammunition

>Poor baby, got hit by stray test-firing rounds, did you?

Such misdirection usually indicates the lack of a better response.

>Do you want to lock and load yet? So far, you've only been dry-firing,
>madly clicking the trigger.

I wonder what this means.

C'mon Bill. Given the language used by NCI types of late, seems fair.

'Course we all know it is a bunch of Telephone Sanitizers and Theologians in full playpen rebellion taking credit for the inevitable but we'll call you terrorists so as not to dent that old self-esteem.

Would it not be hilarious if somehow the issue got sidetracked at WARC?

>If US ARS hams were allowed to "vote" in a popular vote on
>their choice of to keep the code or not, they would probably
>also vote to keep it, just as they have in the past.

Do you really think that the majority of hams, the largest number of which are Technician, would vote to keep Morse code testing? Or do you think that the majority of HF-licensed hams would do so, secure in the knowledge that they had already passed the tests?

>Too bad we are not democratic like Germany...

I didn't know that Germany was a democracy. I thought they were a republic like the US.

>but need the Newington Crowd,

The ARRL HQ staff won't decide the Morse-code testing issue. ARRL's policy will be set by the ARRL Board, only one of which lives in New England. ARRL won't set the national policy either, Clay; that will be set by the FCC. ARRL won't set the interational policy, Clay; that will be done through the ITU, with the US position set by the US delegation. ARRL will have input to that process, but when the decisions are made, as a participant in that delegation, it will support the US position.

> and the influence of a small bunch of Morse Terrorists to do our deciding
>for us.

My guess is that the FCC and the ITU won't know much about the opinions of hams offered on rec.radio.amateur.policy, Clay.

Dick, you have said so many times that the only reason people will learn the code is to pass a code test. I see absolutely no need to do a google search and repost what I am certain people remember.

If you want to do some seaching yourself to repost what you have said about Morse code and testing, you are welcome to do so, but I don't think you will find a single instance where you say that Morse code has enough value that people will learn it because it has usefulness and value.

Please define "acted accordingly". the Newington crowd
did not act accordingly, IMHO.
>
> The ARRL may not have held a specific "election" on it,

If they were not going to heed the desires of the majority
of the membership, then why should they have had an
"election" on it.??

> but they certainly
> DID respond to the voiced opinion of the majority of correspondents on the
> matter...If they had NOT, the ARRL would still be, I believe, staunchly
> pro-code test.

They also responded to a threat from the FCC, and to the
cries of the VE Council. Please check the facts. They did
respond, but how did they respond?

>
> That they simply decided to "not oppose" any provision to drop code
> testing at the international level was the path of least resistance to
> accomodate the desires of the membership.

If you substitute "desires of the FCC" and "desires of the
NCI" and "desires of the VE Council, to "desires of the
membership" then I would agree.

>
> Secondly, what "Morse Terrorists"...?!?! The code tests have already been
> pared down to the minimum generally considered to be the "minimum" by
> convention, and the WRC seems to be headed towards deletion of S25.5 as it
> pertains to code testing.

I think the code tests have been pared to "below
minimum". By whose convention is it minimum? If the other
bodies voting at the WRC behave like the ARRL, unlike the
DARC, then it is most assuredly headed toward extinction.
>
> Lastly, the last several FCC NPRM's on the matter have demonstrated a
> growing "popular opinion" that code testing should be deleted or at least
> minimised, which HAS happened.

Using this logic, if I find morning glories in the
garden on Monday "a growing popular weed", even though the
stake holders in the garden want produce, I should turn the
garden over to the morning glories.
>
> The Government put it up for discussion...the people responded, they (th
> feds) acted accordingly. Likewise, the League has responded in a manner
> consistent with the majority opinion of it's members.

IMHO the league (who ever they are?) did not respond
consistent with the majority of their members. The
Newington crowd and several members of the BoD went off on
their own.

>
> Seems to me that the system has worked just like it's supposed to.

I disagree with that conclusion. But, then I may not know
how it is "supposed to".

>> Too
>> bad we are not democratic like Germany,

Everyone interested in the issue (and others) was allowed to "vote" by sending
comments to the FCC on the restructuring proposal back in 1998. No membership
requirement, no license requirement, no limited choices. All comments publicly
available.

Well over 2000 individuals and organizations commented. I did, and I know K2UNK
did. Did you?

On the code test issue, a count of the comments showed that a slim majority
(54%?) wanted code
testing to remain. Also, a slightly smaller majority wanted two or more test
speeds. Almost nobody wanted
5 wpm only.

But the FCC ignored that majority and went to 5 wpm, with clear indication that
if/when the treaty requirement
is dropped, they will drop all code testing.
>
>The DARC vote in no way binds Germany's
>position at WRC. All that DARC has established is
>that within the IARU, DARC will take the position to
>retain code testing.

Yup. And within the IARU, it may well find itself in a minority position. At
the last meeting of Region 3 IARU societies
the societies all voted for nocodetest except for the ARRL. ARRL changed its
official position on the code test issue
shortly thereafter.

>> but need the Newington Crowd,
>
>The last ARRL "survey" came up with almost the same results
>that the DARC "vote" did...and that was in 1957.

Bill, I'm afraid you're mistaken.

To my knowledge there was no ARRL survey in 1957. There WAS a detailed survey of all US ARRL members in 1975,
and the results were overwhelmingly procodetest. (I received one of those surveys, filled it out and sent it back).

In 1996 there was a flawed, limited survey of both members and nonmembers. The results were still procodetest, but by
a much smaller margin than before.

It should be remembered that the ARRL BoD voted FOR a nocodetest VHF/UHF license in 1990, when the FCC proposed
such a license for the third time in 16 years (1974, 1983, 1990).
>
>> the FCC,
>
>The FCC is charged with listening to ALL input from
>both ham and non-ham...and, regardless of that
>input, the FCC then makes a decision based on what
>the FCC believes is in the best public interest.

The overwhelming majority of those who comment and propose to the FCC on amateur radio matters are, in fact, hams.

And the FCC makes mistakes. Look at some of the nonsense we have been saddled with over the years. But
right or wrong, we have to live with what they decide.
>
>> and the influence of a small bunch

1788. A Look at Some Ham Populations

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-17 15:06:15 UTC
From: Valentine Germann <vgermann@socket.net>
Message-ID: <u99b601shvs146@corp.supernews.com>
Source record: 37776

Hello, all!

In looking at the QRZ site I noted that California has just about
100,000 hams. So, in the interest of beginning some statstical
analysis I assembled two other groups of about 100,000 to see
how they broke out by license class.

States Ex Ad Gen Pl Tch Nov

CA 11,400 11,300 17,000 12,500 41,500 6,300

NY
OH 14,850 12,650 21,050 13,150 30,550 6,800
PA
MO

FL
TX 11,000 14,100 22,700 12,450 33,650 5,300
NM
AZ

The last group of states above I'm calling my "retirement states"
while the second group is my "working states." California is in
a class by itself, obviously.

The Tech class is a bigger deal out there, isn't it? Interesting!

Val Germann
Columbia, Missouri
(I'll be taking the Tech test Monday next!)

They HAVE followed the actions of the majority of the correspondents on this Clay. I think you are fighting yourself.

>> but they certainly
>> DID respond to the voiced opinion of the majority of correspondents on the
>> matter...If they had NOT, the ARRL would still be, I believe, staunchly
>> pro-code test.
>
>They also responded to a threat from the FCC, and to the
>cries of the VE Council. Please check the facts. They did
>respond, but how did they respond?

A "threat" from the FCC over the code test issue? When was this?

>> That they simply decided to "not oppose" any provision to drop code
>> testing at the international level was the path of least resistance to
>> accomodate the desires of the membership.
>
>If you substitute "desires of the FCC" and "desires of the
>NCI" and "desires of the VE Council, to "desires of the
>membership" then I would agree.

Sorry..can't add those folks in if you are talking about what the ARRL does/doesn't do. The FCC's "wishes" are to be done with it so the whining of those who oppose code testing will cease, and NCI is an independent

organization with no horse in the race at Newington.

Unfortunately the FCC's hands are tied and have been due to treaties that they are not allowed to unilaterally ignore due to the flak they'd take from Congress, and ARRL respoonds to ARRL membership...NOT NCI. I am sure there are many NCI folks who are both and express themselves accordingly, but there is no requirement that ARRL take ANY heed from NCI policy or practice.

>I think the code tests have been pared to "below
>minimum"

Oh? Five WPM is less than most other nations of the world? Seems to me MOST nations that have had code testing used 5WPM as thier minimum too.

>By whose convention is it minimum?

The common practice of other ITU signatories.

>If the other
>bodies voting at the WRC behave like the ARRL, unlike the
>DARC, then it is most assuredly headed toward extinction.

What's headed towards extinction? The ARRL? Code testing? The WRC itself?

>Using this logic, if I find morning glories in the
>garden on Monday "a growing popular weed", even though the
>stake holders in the garden want produce, I should turn the
>garden over to the morning glories.

Huh? What in the heck are you talking about?

>IMHO the league (who ever they are?) did not respond
>consistent with the majority of their members. The
>Newington crowd and several members of the BoD went off on
>their own.

You have access tot he ARRL's mail? To thier e mail? To thier phone operators who field questions/comments from the membership?

WHY, Clay, would a membership organization who traditionally SUPPORTED code testing drop it's support UNLESS there was a substantial indication BY the membership that THEY felt otherwise?

>>Seems to me that the system has worked just like it's supposed to.
>
>I disagree with that conclusion. But, then I may not know
>how it is "supposed to".

The members express an opinion and the organization responds accordingly. How much simpler could THAT be?

Headquarters staff is not permitted to set ARRL policy, Clay. The ARRL BoD is responsible for that. The staff in Newington carries out the directives of the Board.

You keep getting hung up on this "Newington" thing. Does it somehow make your argument sound better to try to convince people that such decisions are not made by people from all areas of the country?

If you feel the majority of hams in your Division do not agree with ARRL's code-test policy positions, run for Division Director on that plank.

For the record, ARRL's code test policy wrt US regulations has not changed. ARRL has not changed the policy that it supports the retention of Morse code for HF access with US amateur licenses. They did change the international policy to state that ARRL will not oppose the reduction or elimination of the international treaty requiring Morse code testing for HF amateur licensing.

If you must rant, rant accurately.

ARRL and NCI had radically different positions. I am sure that NCI's comments
and reply comments were a significant part of ARRL's decision to do an Ex Parte
presentation to the FCC.

Clay's allegation that ARRL supported the NCI position vis a vis restructuring
is pure fantasy.

HAW! That's a GOOD one, Cecil!

You claim I wrote something, then want ME to pay YOU to back up your own claim.

That joke is almost worth the money!
>
>> Your insistence on making everything binary is not binding on me.
>
>I'm a digital engineer.

So? I'm an electrical engineer.

Your insistence on oversimplification deosn't mean I have to accept them. What is wrong with live and let live?

>Please stop ragging on me for seeing the world
>in black and white.

Where have I "ragged on you"? All I do is point out that the world is more complex than black and white. You don't have to agree or live that way. What is wrong with live and let live?

>View the world in any manner you so choose but
>please grant me the freedom to do likewise.

Then grant me the freedom to disagree with your oversimplifications.

> CW that I can copy is
>slow. CW that I can't copy is fast.

To you, Cecil, not to everyone.

>> Phase distortion on HF is a fact of life.
>
>So is fading. :-)

Exactly. Why take fading as an absolute but phase distortion as "one in a million"?

>Funny how your argument turns and twists 180 degrees
>depending upon which point you are arguing.

180 degree shifts are called binary phase shift - the basis for BPSK. I would expect a digital engineer to recognize the validity of such.

>Why is fading unimportant
>while phase distortion is important? Because fading shoots down your
>argument and phase distortion supports it?

Fading was not reported to be an issue in the cited case.

Why is phase distortion unimportant while fading is important? Because phase distortion shoots down your argument and fading supports it? Sure seems that way.

>> So the fact that CW worked and PSK31 didn't isn't relevant?
>
>Not, it isn't to this particular argument.

Ah OK. Now I understand. What works is unimportant if it violates your boundary conditions, which are only set after the fact.

>In the name of fairness, put
>CW and PSK31 equidistant from Shannon's limit and see which one is best.

Depends on what factors are considered. If the consideration is wpm per occupied Hz, PSK31 wins. If the consideration is wpm in the face of phase distortion, CW wins.

Given a fixed amount of fuel, a Chevette outruns a Corvette.

>Allowing CW to use a wider bandwidth than PSK31 is comparing apples and
>oranges.

Not considering phase distortion is comparing oranges and grapes.

>Allowing CW to use more average power than PSK31 is comparing
>apples and oranges.

Ignoring the fact that one mode worked and the other didn't is comparing fresh oranges to rotten apples. Or sour grapes.

>Allowing CW to get away with a lower throughput
>than PSK31 is comparing apples and oranges.

Considering 0 wpm as being more throughput than 12 wpm is illogical.

I really have a lot of trouble with this.

What percentage of ARRL members have passed a code test?
Could it really be that if a TRUE, full-up plebiscite, one that was
designed to get the MAXIMUM response, would come NOT end
up with a strong majority FOR retaining a code provision? I have
a hard time believing that code would NOT be strongly supported
under those conditions. Something here does NOT smell right
in that I don't see any actual recent DATA on this. That is, could
it be that ARRL did not WANT to know the real story here?

That is, if it were MY organization I would seek to find out what
a TRUE majority IS on the subject and not stumble around with
half measures . . . which is what has happened, it seems to me.

The whole thing is very strange, isn't it?

Let me clarify further:

If a Ham organization has a membership consisting overwhelmingly
of people who have passed a code test, and code testing begins to
come under pressure, it seems to me that the job of the organization
is to find out, as closely as possible, where the membership stands,
in a very detailed and "beyond-any-doubt" manner. From what I have
read here I do not believe that there has been any actual "full-up" effort
taken in many years to determine the actual position of a true majority
of the group, on code testing, and several other important issues.

That is, if it were my organization and such a hot topic was on the
table, I would actively and thoroughly contact the membership, by
e-mail, snail-mail, multiple-mode-mail, explaining the situation and
stating that at such and such a time a truly serious survey would be
taken, to which they were strongly, VERY strongly encouraged to
reply. The goal would be MUCH more than a 50 pecent response,
and to quite a bit more than just one simple "up-or-down" question.

Isn't it true that no such thing has been done in many years?

No doubt this would be expensive but, hey, this is IMPORTANT, is
it not? Once again, I find the lack of precise information here more
than a bit disturbing.

I know I'm an outsider and currently belong now to no amateur
organization. But I will (I hope) soon!

Am I just wrong about the above?

Val

Hi Steve,

Of course you ask this question hypothetically, but I ask it
in truth. It is clear to me there was no substantial (read
majority?) indication by the membership that they felt code
testing should be dropped.

And, conversely, the ARRL's comments and position were a
significant factor in NCI's decision to do an Ex Parte to the
FCC. Obvioulsy our presentation was more compelling when
one considers that the outcome was what NCI recommended,
rather than what the ARRL recommended :-)

> Clay's allegation that ARRL supported the NCI position vis a vis
restructuring
> is pure fantasy.

I agree completely ... ARRL did NOT support the NCI position,
but instead tried very hard to convince the FCC to retain 12 wpm
for Advanced and Extra ... NCI asked for a maximum of 5 wpm
for General and Extra ... and a reduction to 3 classes of license
instead of 4 ...

Resentful, Len? I just stated a fact.

> Tsk, tsk, tsk...in trying to "get back" at me, you've now dishonored
> Skip Tenney, the late Jim Fisk, Alf Wilson, Rich Rosen, Terry
> Northrup and a number of staffers who were also licensed radio
> amateurs!

How are they dishonored, Len? They produced a fine publication. It
still failed. Ham Radio never enjoyed the readership numbers of other
magazines.

> Yes, you must think they were all "newcomers," brash upstarts
> who could successfully start and continue an independent
> amateur radio magazine in a different state away from Big
> Brother!

They weren't newcomers. I did not so state. They did not all start the
magazine. There are other independent magazines. "73", "CQ" and
"Worldradio" survive. "Ham Radio" failed.

> >born a civilian. Somebody did refute your mantra that government was not

> distance HF communications in any branch.

What vast experience with Department of State communications led you to make such a pronouncement? Do you believe that State's communicators are charged with CI functions?

> That "your idea" (as you put it originally) somehow got translated
> into "State Department Procedures!" That was bullshit then (1980s)
> and is still as stinky for professionalism in radio communications.

It is quite amazing that you still state that I claimed the use of morse on State circuits in various African countries was my idea. You've not produced any substantiation. You did not understand the rationale behind the use of CW by State then. You don't understand it now.

> >It chafed you then and obviously chafes you now.
>
> No. Dr. Signal Freud is chafed and scratching, wants everyone
> to tell him what a great big pro gubmint communicator. <shrug>

Where and when have I ever made such a statement (or even a complete similar statement)?

Naw, Len. This just illustrates your envy of anyone who has done something you haven't done. Get over it. You aren't a ham and you haven't worked for State. You still have a chance to do one of them. You're too old for the other.

> >...just another instance in which you've written something you know

What are you testing firing, Len? Are you zeroing in for the big kill?

> Do you want to lock and load yet? So far, you've only been dry-firing,
> madly clicking the trigger.

Lock and load, Len? Is this now war? I'll be watching the papers for news on the big clash between California and West Virginia.

Just what di the Newington crowd do (or not do)
that gives you cause to state that they (ARRL)
"did not act accordingly"?

> > The ARRL may not have held a specific "election" on it,
>
> If they were not going to heed the desires of the majority
> of the membership, then why should they have had an
> "election" on it.??

The directors are elected by the memebership. Once so elected
they vote as they see fit. That's the SAME way the USA
legislative process works.

> > but they certainly
> > DID respond to the voiced opinion of the majority of
> > correspondents on the matter...If they had NOT, the

They responded as elected directors and each voted according to
what they believed was the right thing to do.

> >That they simply decided to "not oppose" any provision to
> > to drop code testing at the international level was the
> > path of least resistance to
> > accomodate the desires of the membership.

As a director of NCI, I am unaware of any pressures,
discussions with or agreements between NCI and ARRL
that could be indicative of ARRL "accomodating the
desires of NCI." If you are aware of any evidence, I'd
love to see it.

> > Secondly, what "Morse Terrorists"...?!?!
> > The code tests have already been

> > headed towards deletion of S25.5 as it pertains to code testing.
>
> I think the code tests have been pared to "below
> minimum". By whose convention is it minimum?

Are you saying that the 5 wpm test has been wrong for
all these decades? 5 wpm has been a fixed staple of the
test requirements since the 1950s. Seems it was good enough
for 1/2 a century for the FCC.

> If the other
> bodies voting at the WRC behave like the ARRL, unlike the
> DARC, then it is most assuredly headed toward extinction.

The test will go to extinction. Code USE will survive because
it does have a following and, I believe, always will. As long as there
is one exotic prefix out there running morse, there will
be new code users.

> >Lastly, the last several FCC NPRM's on the matter have
> > demonstrated a growing "popular opinion" that code testing

>
> Using this logic, if I find morning glories in the
> garden on Monday "a growing popular weed", even though the

> stake holders in the garden want produce, I should turn the
> garden over to the morning glories.

It depends on what you want. Since neither you nor anyone
else has been able to convince the FCC that code testing
MUST continue based on one or more clear and compelling
reasons to keep it, then the analogy you suggest is illogical.

> >The Government put it up for discussion...the people responded,
> > they (the feds) acted accordingly.
> > Likewise, the League has responded in a manner
> > consistent with the majority opinion of it's members.
>
> IMHO the league (who ever they are?) did not respond
> consistent with the majority of their members.

ARRL pushed for 5 wpm AND 12 wpm. What SHOULD
the ARRL position have been in your opinion?

> The Newington crowd and several members of the BoD
> went off on their own.

Again...
What SHOULD the ARRL position have been in your opinion?

> >Seems to me that the system has worked just like it's

No, you are not free to try to change my lifestyle. What is wrong
with live and let live?

> Exactly. Why take fading as an absolute but phase distortion as "one in a
> million"?

I didn't say that, Jim.

> Fading was not reported to be an issue in the cited case.

Fading was reported as an issue by the FCC in trying to copy manual code
without the fifth harmonic being present. That was another cited case.

> Ah OK. Now I understand. What works is unimportant if it violates your boundary
> conditions, which are only set after the fact.

Ok, Jim, have it your way. From now on, when someone says CW gets through
when SSB fails, I will say, "Not when SSB is at 1000 watts and CW is at
one watt." After all, if you don't believe in leveling the playing field
when comparing modes, then you shouldn't object to unleveling all playing
fields. If you don't mind comparing 1000 watts of SSB to one watt of CW
and neglecting the bandwidth, who am I to object?

> it be that ARRL did not WANT to know the real story here?

The only data close to what you may be looking for
is a survey ARRL did 5 years ago. At that time support
for code in the USA was (I think) about 60%. On the
issue of an international test requirement, the vote was (I think)
about 50% or so to let each country decide on their own (i.e.
that would support ending the S25.5 treaty requirement).

> That is, if it were MY organization I would seek to find out what
> a TRUE majority IS on the subject and not stumble around with
> half measures . . . which is what has happened, it seems to me.

Most large organizations operate on a director basis
and do NOT put every policy position up to a full
vote of the membership. The ARRL bylaws do NOT call
for any such direct voting to take place.

> The whole thing is very strange, isn't it?

Not at all when you look at most clubs and organizations.
The elected leadership usually has wide discretion in
setting policy.

Why? ARRL didn't violate any by-laws in taking the action
they did.

> From what I have
> read here I do not believe that there has been any actual "full-up" effort

The ARRL magazine, QST, carried considerable
information over the years.

> The goal would be MUCH more than a 50 pecent response,
> and to quite a bit more than just one simple "up-or-down" question.

Goals are nice, but they aren't attainable just because
the goal is set.

> Isn't it true that no such thing has been done in many years?

See my other post with info on a survey done about 5 years ago.
Note - That was, therefore, fairly recent in terms of the ARRL
position going into 1998's FCC restructuring NPRM 98-143.

> No doubt this would be expensive but, hey, this is IMPORTANT, is

The ARRL did a survey a number of years ago. Approximately 2/3 of the
respondees used CW "rarely" or "never", if I remember the survey words
correctly. The other 1/3 said they "often" use CW. Many of the hams
who answered "often" also "voted" to end the Morse code requirement.
I wonder if the results of that survey are published anywhere on the
web so you could take a look.

Bill:

If DARC wants to keep code testing, I'm sure the Deutsche Bundespost
will vote that way at whatever WRC gets to decide the issue. You see,
unlike the U.S. FCC, the Bundespost has no problem with the bureaucratic
burden of code testing prospective radio amateurs. And Germans (like
myself) aren't a bunch of lazy whiners. They get the job done.

Bill:

You're probably right...I'm sure this DARC thing is just an anomoly,
and we'll eventually get the completely dumbed-down ARS you'd prefer, as a
result of the elimination of code testing.

Not many, much less than half of the licensed hams.

>- Is there a nocodetest license there? If so, how popular is it?

Yes, they have a Technician-equivalent, and it seemed to be quite
popular during my tours in Germany (1983-1985 and 1987-1989).

>- Was there ever a previous survey/poll/vote? If so, how did it go?
>- Why were there so many invalid votes? Why were they declared invalid? What
>would the result have been if they were included?

They may have been declared invalid as a result of not being properly
authenticated. This is a big thing with Germans. If every "i" is not
dotted and every "t" crossed, they'll toss their paperwork in the bonfire
and pretend it never existed.

>- How much influence does DARC have on how the German vote will go at WRC
>2003?

The Deutsche Bundespost pretty much rubber-stamps any DARC
recommendations with regard to the ARS in Germany.

When the plate is full, you dump the dessert into a potted palm. If it is not settled in the bars of Geneva and the hospitality rooms before the session, it is dead. If the Russian delegate even threatens to make a speech on the subject, he won't have to bother to write one.

But like you, I suspect that it will be swept up for a unanimous head nod by some backroom deal. Just who cares enough about the issue to spend any brie and stilton on it is the real question.

Hey Larry,

As to how the Deutsche Bundespost will vote, I have
no idea as I don't know the process that leads to
Germany reaching their own policy position for WRC.

And...
For what its worth to you, my ancestry is 3/4 German.

Cheers,

>

Your question and answer about 5 wpm shows you may have been
less than experienced with HF morse operation. The 5 wpm
was the entry level just to allow one to get a CW Keyed rig
on the air in the novice subbands to begin to get ones speed
up to a "minimum" level suitable for operation in the larger
portions of spectrum outside the novice subbands. 5 wpm was
for entry level novices. Historically, 5 wpm was never
intended to be an on-going minimum. Historically, it took
10 to 13 wpm to be introduced to general use in the
international arena of code not only amateur, but ship to
ship, ship to shore, and other commercial use. 13 wpm was
judged by many to be the minimum operating speed where one
could say one had developed the ear/wetware modem
coordination required for proper utilization of CW Morse.

Of course now these facts will all be declared fabrications,
and mythology by NCIists, ARRL Zombies, etc., in order to
justify their beliefs and actions. Isn't it funny how
historical revisionism works?

Bill, I am more or less one of the good guys because I have long since
seen the day coming with or without NCI. But having been accused of
```

everything short of pedophelia by your minions and lackeys you guys are way down on the list these days.

I don't hope one way or the other. My interest is seeing a lot of NCI rabble howl like stuck hogs and not for revenge but for the utter surrealism it would bring about. It would be funnier than a Mel Brooks movie and wierder than a Dali painting.

Remember, even the Telephone Sanitizers ultimately proved useful; now the Theologians might be another story.

If it happens, you can join me and Jim in a chorus of Springtime for Hitler and I am sure we can quickly teach you the French Mistake.

This sure is a fuzzy answer for a "black and white" logic
purist.;-) If "Many" means most, say 2/3, then 2/3 of 1/3 =
2/9 of those responding. So does 2/9 carry the day?
Are you responding to the question about a "full-up" effort
by your recollections of this survey?

Since Morse testing was only required for HF operations, why
not survey the HF operators?

As someone has pointed out, the last survey was 1975 and it
was clear (to me but not to some others by some twisted
reasoning) that the majority of the membership of the ARRL
at that time wanted to keep the code testing. Unfortunately
the survey did not ask the right questions to make the
results and conclusions unmistakeably clear. If there were
other surveys "to the point" since then I am not aware.

Sounds like it's time to write some elected representatives and ask how one of this country's founding principles can be so easily ignored. I really didn't have much of a position on this matter at the time. But after "getting it done," it's hard to defend the "barrier" stance.

>Are you saying that the 5 wpm test has been wrong for
>all these decades?

Actually, I think it was a mistake. Hindsight is 20-20, of course, and it's
really a moot point now.

By making the lowest test speed 5 wpm, the myth was created that the way to
learn code was to start off at that speed and work up to 13 or 20 wpm, rather
than starting off at 13-15 wpm. The trouble is that many methods used to learn
5 wpm induce bad habits, which then must be unlearned. The work of Koch
(published in 1936) showed better ways to learn the code, but were largely
ignored in this country for decades.

>5 wpm has been a fixed staple of the
>test requirements since the 1950s. Seems it was good enough
>for 1/2 a century for the FCC.

For minimal HF privileges, yes. For full privileges, 13 wpm was required for 17
of the past 51 years, and 20 wpm for 31 of the past 51 years.

The total elimination of code testing may actually be a good thing for code USE
because it may allow better methods of learning to come to the fore.

Check out:

http://www.qsl.net/n9bor/n0hff.htm

for an excellent free online book on the subject.

>
>Isn't it true that no such thing has been done in many years?

To my knowledge, the last time a non-government large-scale systematic survey
of amateur attitudes towards the license tests and structure was done was 1975.

The ARRL sent a detailed questionnaire to every licensed US member at that
time, and displayed the results in QST. This survey was in response to the
FCC's late-1974 proposal to radically restructure the US license system,
including a nocodetest "Communicator" license.

There was a small survey done by the ARRL in 1996 or 1997, which I described in
another post.

No other amateur organization has done any sort of survey on anyhting like that
scale.

Surveys, however, are not the only input to the ARRL BoD, who actually make
such policy decisions. They also look at email and letters from members and
nonmembers, opinions received from conversations with the FCC and
telecommunications industry officials, and trends in other countries.

In all cases the ARRL proposals have stayed fairly close to the majority membership opinion.

When the FCC proposes to make major rules changes, there is usually a Notice of Proposed Rulemaking (NPRM) issued. All interested parties, licensed or not, are invited to comment. Those NPRM comments are viewable at the FCC website.

http://www.fcc.gov

One could say that the comments represent a "free-form survey" of opinion on the issues raised by the NPRM.
>
>No doubt this would be expensive but, hey, this is IMPORTANT, is
>it not? Once again, I find the lack of precise information here more
>than a bit disturbing.

Me too, but it's a bit late now. FCC's response to NPRM 98-143 made it pretty clear that the FCC sees "no regulatory purpose" in continuing code testing for ANY ham license. The only thing that keeps 5 wpm alive is the ITU treaty requirement.

I'm not happy about it, but them's the facts, and FCC is not likely to change their mind. FCC has wanted out of code testing for a LONG time, and has gradually brought it to reality. Only the last step remains, and as K4YZ correctly says, FCC's hands are tied until the treaty changes.
>
>I know I'm an outsider and currently belong now to no amateur
>organization. But I will (I hope) soon!

ARRL is the largest and most representative organization we have for the ARS. It
is well worth joining. I don't agree with every ARRL policy position but I do agree with most. IMO without the ARRL, ham radio be slowly but surely legislated and restricted out of existence. Some ARRL critics would like that, I think.

>The ARRL did a survey a number of years ago.

1996. The survey was flawed in many ways, which were discussed here ad nauseum.

The surveys were sent to 1100 ARRL members and a similar number of nonmembers. Only licensed US hams were surveyed, and the surveys were sent to 200 Extras, 200 Advanceds, 200 Generals, 200 Tech Pluses, 200 Techs and 100 Novices - even though the number of hams in each class is not distributed so equally.

> Approximately 2/3 of the
>respondees used CW "rarely" or "never", if I remember the survey words
>correctly. The other 1/3 said they "often" use CW.

Nope.

There was one question about how often the respondent actually used CW. There were 3 choices: "Never", "Rarely", "Regularly". About 1/3 (plus or minus) chose each.

However, there were no questions about how much the amateur used other modes, and no definition of "regularly" or "rarely".

>Many of the hams
>who answered "often" also "voted" to end the Morse code requirement.

Most of the hams who responded to the survey, regardless of how they answered other questions, "voted" to KEEP the Morse code test requirement.

>I wonder if the results of that survey are published anywhere on the
>web so you could take a look.

Way back in 1997-98 I started to sytematically analyze each question, the results and the flaws of the survey here on rrap. Those posts are still in the archives, like google.

>had already passed the tests?

That would be an accurate opinion with some qualifications.

There are no "HF-licensed hams" in the US. The General and extra classes have privileges for transmission below 30 MHz. General and extra classes may also operate on MF bands allocated to US radio amateurs.

>>Too bad we are not democratic like Germany...
>
>I didn't know that Germany was a democracy. I thought they were a republic
>like the US.

Clay means "democratic" as in "democratic principles." He was not referring to a governmental organization.

>>but need the Newington Crowd,
>
>The ARRL HQ staff won't decide the Morse-code testing issue.

ARRL Hq staff control all the wording and imaging in publications sent and presented to the rest of the country. That is a one-way media condition.

>ARRL's policy will
>be set by the ARRL Board, only one of which lives in New England.

When all of the output of the ARRL comes from a few miles SW of Hartford, CT, the rest of the country gets the picture of a "New England crowd."

>ARRL won't set the national policy either, Clay; that will be set by the FCC.

ARRL both sets and influences national ARS policy...as it sees fit.
The FCC regulates US civil radio by law.

>ARRL won't
>set the interational policy, Clay; that will be done through the ITU, with
>the US position set by the US delegation.

The ARRL clearly tries to influence IARU decisions. Neither the
ARRL nor IARU have any VOTING power at any ITU-R function;
they are considered only as an "advisory" groups or organizations.

The ONLY voting power at the ITU-R is held by government
administrations. For the USA administration that is the
Department of State, the FCC, and the NTIA.

>ARRL will have input to that process,
>but when the decisions are made, as a participant in that delegation, it will
>support the US position.

There is NO "direct participation" by the ARRL in decisions made
by the US adminstration at any WRC. The ARRL is an "observer"
(official ITU-R title) and may act in an advisory capacity only. The
US administration may accept or reject the ARRL's advice.

Please do not rephrase the organizational format of the ITU-R
to imply that the ARRL has any profound effect on the US
administration delegation or has "direct participation" in US
decisions.

It is only common sense that the ARRL supports US federal law
on amateur radio regulations. There is no such supposition that
the ARRL "supports the US decisions [at WRCs]" although your
wording implies that it does.

>> and the influence of a small bunch of Morse Terrorists to do our deciding
>>for us.
>
>My guess is that the FCC and the ITU won't know much about the opinions of
>hams offered on rec.radio.amateur.policy, Clay.

The US administration is made up of State, FCC, and NTIA. Both
the FCC and NTIA accept input from US citizens and US
organizations; the NTIA must consider other US government
agencies since it is the regulator for US governmental radio use.

If the United States is to continue with democratic principles (see
the First Amendment of the US Constitution) then the US
government must also accept US citizen input. It should not be
solely influenced by special interest groups nor should special
interest groups be a sole intermediary "representative" between
US citizens and their government.

The ARRL is a special interest group. The public record on commentary concerning FCC 98-143 shows a strong correlation to the various opinions on amateur radio issues argued within this newsgroup.

Abrupt dismissal of opinions expressed in here show an elitist attitude as if only the ARRL knows what is good for US amateur radio.

>IMHO the league (who ever they are?) did not respond
>consistent with the majority of their members. The
>Newington crowd and several members of the BoD went off on
>their own.

There is NO way to tell if the ARRL is true or untrue in "using
democratic principles" for "representation" of the membership.

The ARRL sets up the conditions, the ARRL advises its
membership on issues.
The ARRL says they take in opinions but the ARRL has
complete control on what they wish the ARRL membership
should know about membership input.
The ARRL directly controls the majority of print and visual
media available to US radio amateurs and others on all
subjects of amateur radio interest.
The ARRL says it is honest and true and good.

It is a Belief System in complete control of the Beliefs.

True believers do not understand that skeptics question
this absolute Belief System. Many of them openly scorn,
despise, and dishonor skeptics as heretics and inferiors
for not Believing as they, the True Believers, do. It has
come down to a minor intellectual jihad of the True
Believers against the Infidels (skeptics, unbelievers).

>> Seems to me that the system has worked just like it's supposed to.
>
>I disagree with that conclusion. But, then I may not know
>how it is "supposed to".

Clay, "supposed to" is easily answered: It is whatever the
True Believers believe. :-)

>
>You keep getting hung up on this "Newington" thing. Does it somehow make your
>argument sound better to try to convince people that such decisions are not
>made by people from all areas of the country?

Please present third-party disinterested PROOF that the
ARRL (wherever it is located) decisions are made by
"people from all areas of the country."

So far, the only "proof" has come from the ARRL itself.

This is one of those "True Belief" things, isn't it?

>If you feel the majority of hams in your Division do not agree with ARRL's
>code-test policy positions, run for Division Director on that plank.

Is this one of those "belief" things again? As in "if you are not an
insider, shut up?"

Here's the self-defining mechanism of this "insider" business:

1. One cannot be a director without having a voting membership.
2. Voting membership is defined by the grant of an amateur
license.
3. The ARRL controls the voting process.
4. The ARRL controls announcement of "winners."

The basic flaw is that there is no way to ascertain that voting
went according to democratic principles. As a private
organization, the ARRL is NOT bound by the same laws that
apply to US government elected officials or legislative matters.
There is NO equivalent to the Federal Register or to any sort
of C-SPAN like recording of the happenings nor is there any
third-party observation of the process or of directors' meetings.

The second flaw is that the ARRL seeks to establish controling influence on federal regulations regarding amateur radio licensing...by those who are already licensed and, in most directors' cases, long-time licensees holding maximum-privilege license classes granted under old regulations.

By all the recorded history and empirical evidence of human behavior, those in control of some personal activity are likely to both retain that control and seek a continuation of their personal desires. All the apologia of "altruism" on the part of the controllers takes on the distinct flavor of plain rationalization if continually repeated by the controllers.

>If you must rant, rant accurately.

If you must act the apologist and rationalizer, please try for some originality. There are a great many skeptics out there who are not of the True Belief.

>I am not oblivious to them, Len. I just don't agree with them, nor do I think
>those that are "real hams" in the characterization that you use are a
>majority of hams. I am a bit curious as to why you do.

No, I disagree that you are "a bit curious." That's often a "polite" rewording of a rebuke in the making.

I have a life experience of exposure to a large number of radio amateurs, radio hobbyists, and electronics experimenters in addition to having completed (not quite) a career in the industry. Since I don't have an imprimateur or badge or title of anything in some Organization in/of/about ham radio in front of a number of organized events so my life experience represents a random sampling in many environments.

It's been my observation that approximately a third of all such "samples" represents the "Real Ham" variety wherein regulations should be frozen to the point of regulations as they were when those began their hobby. In addition, those "Real Hams" want a continuation of tradition and formalcy and rigid adherence to jargon and procedure "in the ham bands" (meaning the HF bands). They put their own particular accomplishments as "models" for others to emulate without regard for others. They resent the new, the different, and generally prefer to be "led" by other self-styled "Real Hams."

>>"My work" has taken me well below MF and on up to Ku band.
>
>Good for you. If you could ever set aside your resentment, there is much you
>could teach others.

I have no "resentment" your majesty. I don't have any warm regard for the "Real Ham" environment.

I don't have any warm regard for those who find comfort in a pseudo-military service concept of a hobby. Certainly not for those who wish to wrap themselves in patriotic bunting and proclaim their hobby activity as some self-enobling "national service." Citizenship doesn't need self-serving jingoism, titles, impressive "credentials" flaunted as if they were some divine gift. A hobby is a hobby. No more, no less.

I don't have any warm regard for those judgemental types who strut around and proclaim "this is what hams DO!" when it is really their own personal preference with a large amount of self-puffery. They abhor the individualist and experimenters who go beyond their own rigid codes of conduct and established procedure.

Yes, I suppose I could "teach" something about technology of electronics after a career in the industry and a longer period as a hobbyist. It's an interesting avocation as well as occupation. That isn't to say I'm "expert" or "exhalted" in any area...I'm not but it would appear that some experience might seem "rocket science" to those multi-credentialed hobbyists who cannot understand the basics of radio or electronics.

Long ago I and a few hundred thousand others have discovered that electrons aren't influenced at all by credentials, personal opinions, personal desires, threats or entreaties. Everyone obeys the laws of physics on electrons' terms. No exceptions. Totalitarian situation? You betcha, but that's how the universe goes down.

All the rest is a man-made construct whether its regulations or fraternal orders. Regulations are needed to keep order in the EM spectrum among the many and varied radio services. All the rest of it is an artificiality based largely on the straw piled up by long-ago first-timers, politics of one group vying for control against competitors, egos manifesting their nobility and righteousness in self-defined majesty, machismo running amok in a predominantly white male avocation proclaiming their "realness." :-)

"Resentment?" Hardly. Humor certainly. If electrons and EM waves had emotions they would be having a ball over the antics of "superior" humans with all those "credentials." :-)

Now you come on back after completing the summer school re-doing Psychology 101. I won't chide you for failing the first go-around.

Call it what you will. That was a long-running thread originated a
long time ago by someone who tried to pull off an "I am the
expert here!" snow job and ran head-on into someone who had
already been doing HF comm before him.

>>>No, no, no, no. You only need to obtain a license in order to have many
>>>hams take your views much credence.
>
>>Nope. Heil's "credence claim" is only for Heil and even then he is only
>>using it as a reply device.
>
>I think Hans makes more use of his license than to reply to you on rrap.

? I'm sure Hans Brakob has other hobbies and he loves nature.
Fine by me. He likes to communicate by radio. Fine.

>>>You've blown smoke here for years without much in the way of support.
>
>>Nope. I gave up smoking some time ago. :-)
>
>Now, we DO know better. This is a blatant an attempt at misdirection as I
>have ever seen! :-)

How? Is smoking okay now?

You could just as well make the entreaty "Don't be controversial or
nobody in here will like you." Oh, boo-hoo.

>>>Who would go to a non-ham for advice about amateur radio.
>

>>Several have. I've tried to be obliging and have given them help
>>on their electronics knowledge. I don't know that any one of
>>them ever resented any of that help.
>
>Nor should they. Most of what I know about electronics technology came from
>the teachings of non-hams.

Most of what I've learned about civility, comportment, and standing
up for what I've believed in came from humans with NO certificates.

Most of what I've learned about ham came from butcher shops,
cook books, doing cooking myself, and eating. No pig ever
taught me anything about technology.

Read those two preceding sentences very carefully and try to find
insults on/of/about amateur radio. Odds are in my favor that
some idiot will be outraged and "reply" in fury.

You are also free to say "some of your best friends are <insert
minority group of choice>." There are also several other
standard phrases, almost boilerplate, that can be used to
comment. None of those apply either...

>Why would you be surprised to know that Amatuer Radio works on the same
>physical laws as the rest of the Universe? I don't think that most people
>would be surprised; I am surprised that you are.

Someone else made the snarly comment that no ham would
ever take advice of a non-ham. He may think that physical
laws are "different" for amateur radio as opposed to every
other radio. More likely he assumed that "everyone else"
had the same experiences and desires and personal
preferrences that he does.

>You cannot supply any proof that you never took and failed a ham exam, Len.
>I think it only fair that we hold you up to the same standards of proof that
>you demand of other posters.

You have it confused. Someone else made the charge that I've
"failed" obtaining an amateur radio license. HE must supply the
proof of a test failure. There's no record anywhere.

Who can prove a non-existant thing?

That person's statement DEMANDED an amateur certificate "to
have credibility." That's one of the incredible "requirements" which
is, as the French might say it, merde.

>It is a bit odd that someone would be interested enough in ham radio to have
>written articles in ham magazines and typed volumes of posts. Reasonable
>people will know that something is going on...

Well, then, you just work on this terrible "conspiracy" thing.

I have written about politics, national and local, without ever holding any political office or degree in politics. I have written about US foreign policy without any desire to work at the Department of State. I have written about civil aviation avionics but don't have a pilot's license. I have written about outer space but I've never been there. I have written about espionage without once having been a spy. I have written about electronics that hadn't been built or tested before they were actually built and tested. I have written about human behavior without having any degree in psychology. I have written about cats but cannot be one. I have properly directed the flow of electrons yet I am unable to sense one. I have operated a transmitter legally IN an allocated ham band yet I have never had an amateur radio license. Most done outside this newsgroup

By the "Hare-y" logic regulation given above, "reasonable" people might "know something else is going on." Pfui. Truly reasonable people will come to a proper conclusion that I've written a lot of words and expressed a number of thoughts over the last half century. If you don't like those words, don't read them. Nobody is forcing you to read.

>>Tsk, tsk, tsk...in trying to "get back" at me, you've now dishonored
>>Skip Tenney, the late Jim Fisk, Alf Wilson, Rich Rosen, Terry
>>Northrup and a number of staffers who were also licensed radio
>>amateurs!
>
>Now you are telling people that a simple statement of fact that Ham Radio is
>defunct dishonors those people. In doing so, you have added a lot of your
>words to what he said...

No, I was making a sarcastic statement about that other person's use. The word "defunct" is defined as "no longer existing; dead or extinct." The semicolon is a separator of two uses of the word. The implication that Heil clearly made was towards "dead or extinct." HR lives on in CD-ROM, the old HR Bookstore incorporated into CQ's.

You will try to rationalize your way out of that so I direct you to the porcine sentences I gave above. Words can be arranged to result in all sorts of reactions in readers.

>>No. Dr. Signal Freud is chafed and scratching, wants everyone
>>to tell him what a great big pro gubmint communicator. <shrug>
>
>Wasn't his name Sigmund? And why do you think Dr Freud is concerned with what
>is said on rrap? Freud has been dead for quite some time.

Signal Freud is a third cousin four times removed who once got hertzed, became partially psychotic, and joined a foreign service...and may have become intellectually dead in his powers of psychoanalysis. We aren't discussing the same

individual.

Try ebay for a sense of humor. I hear they sell all kinds of
things cheap...

>mortal. I am not a psychologist, so I can't really tell what that means, but
>reasonable adults can come to some sort of conclusion, I am sure.

Reasonable people can also come to the conclusion that you
are yanking mightily on chains. Those chains aren't attached
to me. Go back to the smoky mountains of apologia in ARRL
country. It better suits you.

Agree.

> This is one of
> the shortcomings of being a member in the ARRL--there are not enough
> "outspoken" members to contribute to the will and direction of the ARRL.

Such is the plight or the reality of almost any organization.
There is but 10-15% of the membership that takes on any
interest level beyond getting the monthly newsletter. Fewer
still that get involved as leaders. In contrast, there's always
a subset of complainers who never offer a constructive
word or advice and/or offer to help. I learned as president
of a national antique car club that the best thing to do was
listen with a friendly ear and then keep doing what I thought
was best. I also learned the fastest way to shut someone
up was to tell that person..."Hey, you have a point there, how
about you leading a committee to investigate further and get
back to us in a couple of months." Boy does that silence
the loudmouths who can only critisize.

> The result, then, is an organization that moves at the will of a few in
the
> leadership.

Been that way in every organization I've been in. Car clubs,
Boy Scouts, church groups, etc.

> However, I might add that let the ARRL make a decision that
> would really upset a lot of members and they would certainly
> hear about it.

Another factoid... If no one is complaining, then everyone is
relatively happy. If a handful of people are complaining...BUT no
one is saying good job...you can still be certain that MOST people
are relatively happy. If the membership rises up en mass...then
you got unhappy members. Sadly, few people take the time to say
"well done" while in contrast, someone "ticked off" will write or
complain in a heart beat.

> Therefore, due diligence dictates that the leadership understand their
> boundaries, limitations, and even understand what the majority of
> "active" (read: those who care) members would really want.

Agree.

> > Isn't it true that no such thing has been done in many years?
>
> I don't think I have ever been asked anything by the ARRL, as far as
> opinion.

As noted in other emails. There WAS a survey about 1996.
Some (Jim N2EY) believe the methodology was flawed.
Notwithstanding that point, that's one that comes to mond.

<SNIP of CC&R opinion reference>

> > No doubt this would be expensive but, hey, this is IMPORTANT, is

Agree.

> That becomes rather unpopular, but it's
> politics--so who cares?

Why should it be unpopular...unless in the doing you get
in other people's face...i.e. a bit of overdoing it.

> > I know I'm an outsider and currently belong now to no amateur

That only impacts actual voting. Val could certainly voice
his opinion to ARRL leadership. Indeed, there is on
occasion letters/correspondence reported via QST from both
full members and "associate" members.

> ..Ed, correct me if I am wrong on that. However, you may at any

Oh, I get it now. If you can't get a majority of licensed hams
to support continued morse testing requirements,
then narrow the field of eligibility of those that should count to
only HF licensed hams. Sheesh...where will it end?

Cheers,
Bill K2UNK

> You keep ragging on me to accept your oversimpliications, Cecil.

I'm not asking you to accept them for you, Jim. I am asking you to
accept that I function that way, in my life. That's the choice I made.
If the nocode Tech license had never existed, the ham population would
either have declined or it wouldn't have. That's black and white. I
believe it would have declined. There are only two real possibilities,
decline or not.

> How am I stopping you from doing that?

You're trying to talk me into a more complex pattern of thought.

> >What is wrong with live and let live?

> A question I asked you first.

I've been asking that question for 15 years. Why are you trying to
change my thinking patterns that I have developed over 64 years?

> >To me, it not more complex than black and white.

> Then you are disconnected from reality. Sorry.

It has worked for me for 64 years. Sorry. We each make our own reality.
What other possibility is there besides the ham population declining
or not declining? I can't think of any.

> How is my disagreement "changing your lifestyle"?

What are you trying to accomplish except to try to get me to change my
thought patterns to match your more complex ones?

> You described W0EX's experience as a "one in a million"...

Well, exactly how many Homo sapiens have copied the CW ID of PSK31
when PSK31 couldn't be copied? And the problem may have been in the
way Dick mistuned the PSK31 signal. Since the same equipment was
not being used for each reception, the validity of the observation
is of limited utility. I'll bet my IC-756pro with ClearSpeechï¿½
receives SSB better than my 38-special receives CW.

Here's another example: I can raise a PACTOR II mailbox when I cannot
even hear the PACTOR II signal or any CW signals. I have the volume
control turned all the way down. Is that a reasonable comparison?

> But not the case cited first.

The case cited first was the creation of the heavens and the earth.
What difference does it make which case was cited first?

Not true...since 5 wpm has been a permanent license requirement
for techs.

> 5 wpm was
> for entry level novices.

And still was until 4/2000.

> Historically, 5 wpm was never
> intended to be an on-going minimum.

It only lasted on that basis for about 10 years. Sometime
in the 60s it became permanent (since Novice license
became renewable) and may have been even before
that for Techs who where allowed on HF novice segments.

> Historically, it took
> 10 to 13 wpm to be introduced to general use in the
> international arena of code not only amateur, but ship to
> ship, ship to shore, and other commercial use.

Are you saying novices and techs couldn't/wouldn't
operate internationally? As for ship-to-ship-shore
or commercial...who cares...that's not amateur and
even so, all that has ended.

> 13 wpm was
> judged by many to be the minimum operating speed where one
> could say one had developed the ear/wetware modem
> coordination required for proper utilization of CW Morse.

And that means what TODAY? And to whom is it of any
importance?

> Of course now these facts will all be declared fabrications,
> and mythology by NCIists, ARRL Zombies, etc., in order to

No principle's were ignored. The FCC is charged with
doing what is best for the public good. The FCC is
not charged (as any aspect of founding principles) to
follow a path passed solely on a count of the comments
pro/con on any particular issue.

I think that for a long time Morse was the issue. At least into the 1960-70s, Morse was in wide use in both the US military and commercial services. Particularly the seagoing folks.

There was also the "Sputnik effect" .

Here's a theory for you:

Since the early 1970s, the FCC has had a tiger by the tail in the form of pirate/freeband folks. Perhaps FCC thinks that making ham licenses easier to get will induce these folks to be licensed, therefore making them easier to control.

That may sound "out in left field" at first, but look at FCC's actions since 1976 or so.

I hardly think this issue has anything to do with the
"public good" as that expression is commonly understood.
It's purely an internal (to the ARS) matter. And based on the
atttudes toward government, and government regulation,
commonly displayed by those opposing code testing, I rather
imagine that if the FCC were suddenly to reverse course about
code testing, we'd VERY soon be hearing very LITTLE about
how the agency is NOT to take into consideration the positions of
those being regulated! Indeed, if such a thing should take place
I think those opposing code testing would be VERY hard pressed
to believe that such an attitude on the part of the FCC would in
ANY way be coincident with ANY public good at ALL! :-)

Maybe you should have gone to accredited schools. I'm sure the results
would have been better.

Amateur radio does not consist solely of radio theory.

> >You cannot supply any proof that you never took and failed a ham exam, Len.

Actually, failing to obtain an amateur license is not the same as
failing the exam. If someone fails to meet his goals, he does not fail
an exam.

> Who can prove a non-existant thing?

...or even a non-existent thing (mater, mater, mater).

> That person's statement DEMANDED an amateur certificate "to
> have credibility." That's one of the incredible "requirements" which
> is, as the French might say it, merde.

I've never DEMANDED anything of you at any time, Len. That'd make your
statement merde de bull.

Gee, you've written about a lot of other things you've never been or
done. That makes your frequent spiels here much easier to understand.
Writing on something is not an indicator of expertise in a subject.
By the way, was most of your other stuff fiction?

> By the "Hare-y" logic regulation given above, "reasonable"

Yep, Len. You've apparently got an opinion on most everything whether
you know anything about it or not.

Let's try another game. Let's go ahead and read your material and then
feel ourselves free to dismiss them as bunk.

> >>Tsk, tsk, tsk...in trying to "get back" at me, you've now dishonored

> incorporated into CQ's.

Len, "Ham Radio" magazine does not exist. Living on in CD-ROM or in
dusty bookshelves isn't the same as publishing a new issue each month.

"Ham Radio" only lives in the same sense that Walt Disney lives. He, by the way, is also defunct, dead, has ceased being. That statement of fact does not dishonor Walt or the other dead.

> You will try to rationalize your way out of that so I direct you to

They certainly can. I especially liked that part where you cooked yourself.

Your ignorance is showing again, Larry. Expressions such as "Monday next"
are used quite a bit down here in the South.

The amateur radio service IS a public matter.

> And based on the
> atttudes toward government, and government regulation,
> commonly displayed by those opposing code testing,

Huh? Exactly where have we (those that oppose code
testing) displayed any attitude "against" gov't, gov't regulation)?

> I rather
> imagine that if the FCC were suddenly to reverse course about
> code testing, we'd VERY soon be hearing very LITTLE about
> how the agency is NOT to take into consideration the positions of

While a "turnaround" would not make me happy,
you are misguided if you think we would abondon
the reasoning used so far. Such a "turnaround"
would be most difficult to justify given the public
record and reasoning so far.

> Indeed, if such a thing should take place
> I think those opposing code testing would be VERY hard pressed
> to believe that such an attitude on the part of the FCC would in
> ANY way be coincident with ANY public good at ALL! :-)

You have offered NO reason for any "turnaround".

You been reading my old posts??? The great unanswered question in a lot of this is what is expected of the ARS by the FCC (love those TLA's). Certainly in the Cold War/ Sputnik era we were expected to provide a pool of CW ops; I was hustled by NSA and was not licensed at the time having let them lapse for the Nam. Not wanting to spend much time in a tin shack in Alaska copying Russian fishing boats into a Cyrillic typewriter at 12 wpm, I graciously told them to take a hike.

Since then piracy has indeed become a problem more on Marine freqs really than CB; there has been a group of bootleggers in the Air freqs below 40 meters since WW2. The broadcast pirates below 40 have better programming than the local Clear Channel Communications outlet (or K1MAN for that matter) so there are those who are for letting them do it. It does indeed appear the Commission is all for filling HF before the pirates do. They

assign US SWB to Fixed Freqs outside the normal SW bands which have themselves been expanding and of course there is the small matter of 60 meters. One wonders if Gene Scott's mission in life is to occupy the military and NASA freqs until they are needed; KAIJ has been on an oddessy as has Brother Stair on WWCR. And some of the 26 MHz studio-transmitter links program reggae to keep their freq from being freebanded. Not half bad actually.

CB is an interesting mess because of the cast of characters which really needs to be sorted out to make any sense out of it. You have the legal band/idiotic power level folks on Channel 6 that sounds like the low end of 20 in the AM days and assorted channel masters and headcases. You have SSB freebanders who are by and large pretty civilized and have flowed into the ARS forever without incident. Then you have the AMers who are by and large scum. It reminds you of Mississippi: anyone with intelligence or ambition left years ago leaving some pretty fragrant garbage including a certain minority leader and federal judge. The truckers who are our nemesis on ten are more refugees than combatants just looking for a home. And there are a pretty fair number of Techs who freeband in preference to taking a code test when the spots are up and as they have someone to shoot DX to, one would assume this is pretty worldwide.

So yes, the code test stands in the way of making honest HF amateurs out of the great unwashed to be led in righteous paths by an examination ritual of more form than substance and by us OTs thru the Dudley Doright Effect -- fine non-fingernail biting gentlemen that we are. It is sure consistent with previous actions inside and outside the Amateur Service, not the least of which is opening 10 meters to anyone who can pass a code test.

It is a pretty fair bet that code testing will disappear if possible for precisely the reasons you state so quickly the doors of the FCC will be sucked shut by the venturi effect of all the rushing around.

But I question again whether the issue at 5wpm is the Code or the simple requirement to actually DO something no matter how trivial as part of the process. I have come to believe it is the latter. It could be doing a box-step to the Wienerschnizel Waltz for 15 seconds and we'd have No Waltz International in a heartbeat with the same old horseshit and anti-personnel barrage.

If indeed this is the case then we can expect it to be a giant marketing game where instead of the standard 5 rigs before putting the last CB into the garage, we go thru a few transceivers with AM grafted on before letting the ticket expire and people cycling thru radio like the visitors to Lenin's tomb. And it actually will not stop most piracy.

It will sell some gear in the short run and it will reward some people although not the NCI poobahs who having served their purpose will more than likely get stabbed in the back. As Stalin put it, you can't make an omelet without breaking eggs. I note one of them in an appropriate speech with all sorts of martial struggles etc is resigning to let someone else

lead the the inevitable victory, yada yada yada; he probably noted the purchase order for whetstones.

So yes, I think the major function of the ARS in Washington is indeed to be a weapon against piracy. I also think it will fail miserably.

Jim:

Do you really actually *believe* that nonsense, or are you just parroting a bunch of mealy-mouthed, politically-correct nonsense so nobody in your local radio club will hate you?

When the code testing requirements are zeroed-out, then code use will be on it's way out as well. Right now it has reached a plateau which will remain stable for around ten years or so, as present old-timer CW users start to die out, total on-the-air CW usage will decline at a steady rate, perhaps a bit flatter than the typical bell-shaped curve. There will be occasional new users of CW, but they will not get on-the-air in the kind of numbers that will keep the mode "alive" in a form recognizable to present-day hams. In fact, by the 2020 - 2025 time frame, I would expect to see on-the-air CW usage to be pretty much gone, assuming that ham radio itself lasts that long. In other words, we'll be able to enjoy CW for the rest of our lifetimes, but when we die, we'll be taking it with us.

If you think you can "sell" CW to newcomer hams based solely on it's merits, then, my friend, you don't have a single moment to waste posting on this, or any other, newsgroup. You've got to put on that checkered jacket and get out there on the sales floor! Good luck!

I certainly agree, "function" would have been a better descriptive.

> I see a lot
> of hams who say a 75m Hamstick "works" great. You say the CW ID works great compared

Uh, Cecil, ham radio on the air isn't always about "scientific" comparisons, it has to do with
diagramming what works and what doesn't under the instant circumstances. It's what separates the operators from the lids, or didn't you pick up on that?

> You must compensate the measurements
> for bandwidth, throughput, and power for it to be a scientific comparison.

Yeah, as I suggested, why don't you just go right ahead with all that, meanwhile I 'll carry on, on the air with CW when I find that it's the mode that holds up and *functions* when PSK31 has tanked. See, just be a happy injurneer and I'll be a happier ham.
Shannon will forgive us both.

Sure didn't work at all through my 500 cycle filter on the Icom. Or should I say it didn't *function*. Performance is what the we want, fella, you can keep your theoretical stuff in the lab.
Bring it out when you have something to show us. All the verbiage is so much mush.
We know what Shannon said. But you nor anyone else but MY GEAR set the parameters for the communications channel that early morning. I know that Shannon would be sensible enough to agree, even if you aren't.

Sure. "Gee, this stuff MUST apply to ham radio, after all it's part of the license exam".

Is that a real, serious question? Cecil claims that sort of perfection. On every test he ever took. That is, except CW test. I imagine that might explain why he hates it so. The test, that is. He claims to love the mode, yet is obtuse enough to believe that serious numbers of newcomers will want to study and learn it when it isn't part of the test.

Oh.... Did you find those on your Extra Lite? We long ago stipulated that the entry level exams always were and should be basic and easy.

What I find curious is that all you "license class doesn't matter" types have jumped right onto the Extra Lite even though you wouldn't be caught dead on CW.

1878. For Discussion: ARRL Fee's

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-18 06:37:45 UTC
From: KC8PMX <kc8pmx@NOSPAMdiamondcs.net>
Message-ID: <a74rra91906@enews1.newsguy.com>
Source record: 37838

Since it has been brought up here so many times in arguments and debates that only 1/4 of the licensed population of hams are ARRL members, would it stand to reason that it may be of benefit to the ARRL to create an incentive membership rate for licensee's who never had a membership before? (for long-time licensees or newbies both) I was thinking something like $20 for the FIRST YEAR ONLY and then the second year and on are normal rates. Again this is for licensees who are pursuing a FIRST TIME MEMBERSHIP.
Granted, some are of the mind that they will never pursue membership ever......

Is this something that may encourage more growth in their numbers? (They didn't have these people beforehand so it is actually a gain in some respects.)

Is this something that "may" encourage these people possibly to stay after the first year?

Your ideas and thoughts....

>Message-id: <u99hia9ur15df4@corp.supernews.com>

>I really have a lot of trouble with this

I thought as much.

>What percentage of ARRL members have passed a code test?

What does it matter? It's not the percentage that HAVE passed a code test
that matters here, it's what thier OPINION is of the tests NOW. Is the ARRL
supposed to alter it's policy based on the test's passed, or the opinion of the
members?

>Could it really be that if a TRUE, full-up plebiscite, one that was
>designed to get the MAXIMUM response, would come NOT end
>up with a strong majority FOR retaining a code provision? I have
>a hard time believing that code would NOT be strongly supported
>under those conditions.

Why don't you buy the ARRL's mailing list and conduct your own poll? That
way it's not "colored" by ARRL politics and you would know for yourself.

>Something here does NOT smell right
>in that I don't see any actual recent DATA on this. That is, could
>it be that ARRL did not WANT to know the real story here?

Val, how long do you think it would take those disaffected members to vote
with their feet if the ARRL was doing something significantly contrary to thier
wishes?

Do you really need to have some poll done? This matter has been going
around and around for the three decades I have been involved in Amateur Radio.
While I wouldn't care to hazard a guess on exact percentages, I am sure that
the present "no code/slow code" opinion is shared by the majority.

>The whole thing is very strange, isn't it?

Nope.

The dishonor is Lennies.

Personally, I'd be jumping mad to be one of those folks or thier survivors and know that someone who had once been an "insider" in "Ham Radio" magazine now uses his previous association with it to somehow "justify" his vile and revolting antagonistic stand against all things involved with it.

How cowardly to do so and invoke the name of the deceased as a cover for such rantings.

>Lock and load, Len? Is this now war? I'll be watching the papers for
>news on the big clash between California and West Virginia.

I'll take 10 West Virginians with rifles against the entire California National Guard and State Military Reserve. Just aim below the spike dyed hair and above the nipple rings. Sure kill every time.

>The directors are elected by the memebership. Once so elected
>they vote as they see fit. That's the SAME way the USA
>legislative process works.

Bill, did you have a really bad day or was this a typo?

The directors are expected to carry out the wishes of thier constituents,
just like my state and local officals are expected to do.

When my local officials start acting on thier own accord, they get
recalled. And when ARRL elected officials don't conduct themselves according
to acceptable standards, THEY get recalled.

>They responded as elected directors and each voted according to
>what they believed was the right thing to do.

They have, as I always believe they have, responded according to what the
predominant opinion was of the electorate. It wasn't always what >>I<< wanted,
but the majority got the nod. And that's the way it's SUPPOSED to work.

>I have no "resentment" your majesty. I don't have any warm regard
>for the "Real Ham" environment.

"I have no "resentment", your majesty".

Whew! Takes a LOT of cajones to author a statement like that!

Lennie, I NEVER see Ed address you in such a way. Why do you do that to him? (No need to answer...we already know, but it would really shock the heck out o a lot of folks to see where you get off doing it)

>I have a life experience of exposure to a large number of radio
>amateurs, radio hobbyists, and electronics experimenters in
>addition to having completed (not quite) a career in the industry.

Having "not quite" completed ANYTHING is your life story, now isn't it, Lennie?

>It's been my observation that approximately a third of all such
>"samples" represents the "Real Ham" variety wherein
>regulations should be frozen to the point of regulations as they
>were when those began their hobby.

I know I am wasting badwidth with this question, but I will ask His Putziness to produce some "documentation"...some verifyable numbers on this.

>I don't have any warm regard for those who find comfort in a pseudo-
>military service concept of a hobby.

This from a guy who can't make more than five posts without reminding us of his Korean-era one-tour miliary career, this is VERY funny!

>Certainly not for those who
>wish to wrap themselves in patriotic bunting and proclaim their
>hobby activity as some self-enobling "national service."

We don't have to do the wrapping, Your Traitorishness... the agencies that have, time and time again, put THIER signature on the line lauding Amateur radio for it's services to teh Nation do that perfectly well.

I KNOW it eats you up, but it's still facts. Department of Defense, Department of State, A.R.C., Salvation Army, F.E.M.A., etc etc etc.

And as for "wrapping up in patriotic bunting", all I can say is what do
YOU have against being wrapped up in American red, white and blue?

>Citizenship
>doesn't need self-serving jingoism, titles, impressive "credentials"
>flaunted as if they were some divine gift. A hobby is a hobby. No
>more, no less.

Still, Lennie, it irritates the hell out of you that Amateur Radio IS more
than a hobby. YOU can "nay say" it all you want. A hand full of the "unwashed
masses" can do more WITH radios in a day than you did in almost 50 years...

Sucks to be you, Lennie.

>I'm not but it
>would appear that some experience might seem "rocket
>science" to those multi-credentialed hobbyists who cannot
>understand the basics of radio or electronics.

Lennie...how much restraint did it take to type this...?!?! I KNOW you
were just DYING to say "YOU'RE DAMNED RIGHT I AM BETTER THAN YOU!"

No matter...it STILL sucks to be you.

>Now you come on back after completing the summer
>school re-doing Psychology 101. I won't chide you for
>failing the first go-around.

Good. Especially since you've been around MORE than once!

>> How would this technique you feel people are using to pass their exams so
>they
>> won't learn anything work if someone knew the meaning of every word in a
>> question and the correct answer?

> Is that a real, serious question?

Is it a serious allegation from you that most people are rote memorizing word assocations on the exam pool questions without understanding the meaning of the words? If so, the question is a valid one.

If you didn't mean that when you said it, you can post a corrected version. I THINK you meant to say that they are memorizing the question and correct answers without understanding the technical concepts behind them, but as you point out often, I am not a mind reader, so I respond to what you say.

>Cecil claims that sort of perfection. On every
>test he ever took.

He may be capable of such memorization skills, as I am sure a handful of people are today. Cecil's point is that the memorization you claim is rampant today existed when he took his tests in the 1950s, because he did it.

I, OTOH, do not feel I am capable of such memorization. If I were to be examined on a subject that was new to me, I would pass that exam with a combination of learning, memorizing, lucky guessing and hoping that a few of the tough questions did not appear on the exam I took.

I passed the CW test with only memorization.

>He claims to love the mode, yet is obtuse enough
>to believe that serious numbers of newcomers will want to study and learn it
>when
>it isn't part of the test.

Remains to be seen, Dick, but I believe that the number will be smaller because of some of the things you say about the mode, such as its not having enough value that serious numbers of newcomers will want to study and learn it when it isn't part of the test.

The twists and turns of the wheel of fate are hard to predict especially as it involves the future but you are more than likely correct. But it is not the function of authority to prop up the corpse. It was once said that it was fortunate the Interstate Commerce Commission came too late to preserve the Overland Stage and Pony Express because they would have found a way to at least try. We can live without turning things into museums and in general we have lived better without the ICC.

You did enough military time to have had a gutload of 'Motivation'. At some point you realize that you do not really motivate anyone to do anything, learn anything, or be anything. But you also realize that it is within your power to demotivate -- seems like they did a bit of a job on you personally -- or be a real pain to someone who is self-motivated. Jim's point with which I agree is that it is damned demotivating to have to unlearn what you did to get the right to practice the art in order to get good enough to do it. The trip is long enough without someone planting land mines.

Had the chance to visit with a bunch of my seventh graders after they went to the state football quarterfinals as juniors. When the gush and goo died down I asked them not if I did them any good but if I taught them anything that needed unlearning later -- in essence had I bullshitted them? The starting center was a really bright kid who was something of a blimp when I had him who couldn't get the ball thru his legs on a consistent basis-- he was known as Mongo even then. But Mongo has spent a lot of time in the weight room as have they all. I cannot claim any responsibility for his efforts but I can claim that I got the hell out of his way and gave him a pretty good reason to make the effort. After that, I will get out of his way any time he wants.

Morse will survive or not on the efforts of others. It is really not within my power nor should it be to force it on anyone no matter how good an idea I might think it is; I have a similar problem with forced baptisms. But at the very least, I should do no damage, sling no bullshit, and provide no obstruction to those who are motivated and not allow anyone else to do so unchallenged. And the only way I know to get that motivation is to be a good example and hope for rain.

Jim is simply saying that the methods in use to get to 5wpm are deadly in getting to 15 and require unlearning and are therefore wrong. I can but agree.

Must be where I got it. Great minds think alike.

>The great unanswered question in a lot
>of this is what is expected of the ARS by the FCC (love those TLA's).

Betcha they really wish we would just go away. But since that's not gonna
happen, next-best is to be a catchall service. That means the licenses gotta be
real easy to get.

>Certainly in the Cold War/ Sputnik era we were expected to provide a pool

>bad actually.

Yup to all of it. Ya gotta wonder what the real agenda of some of those folks
is. And whether they'd accept a license if the FCC just handed them one, tied
to an amnesty document. For some the piracy is the game - many speakeasies
folded after Prohibition ended.
>

>
And it's been going on for decades. The limits on our amplifiers date from
1978, and one of the main reasons for Techs and Novices on 10 decades back was
to occupy the band and give the pirates some competition/pressure.

When the EIA proposed "Class E" CB on 220 MHz, CB groups far and wide opposed
the move, even though it would have given them more channels and FM.

>So yes, the code test stands in the way of making honest HF amateurs out

I dunno how you mean "stabbed in the back". Explain?

I see NCI as the classic rooster taking credit for the dawn, then quietly fading away, as has happened before. Didja know that the 1951 restructuring that started the whole current mess was largely pushed by two small groups, one pushing a 'phone agenda and the other a CW agenda? They are all but forgotten today. Probably nobody here but me even knows their names.

>As Stalin put it, you can't make an

Martial or marital problems? (actually, not much difference, is there?)
>

>So yes, I think the major function of the ARS in Washington is indeed to
>be a weapon against piracy. I also think it will fail miserably.

Might actually work the other way. Pirate types might use the ARS to get started, tire of the limitations and compulsive rule-following, and become pirates. Ya never know.

Keep passing the open windows and be sure to know where your towel is.

I have somewhat the same problem I have with the upcoming feast of Ishtar. Who supplied the props, who puts up the money, who cooks the meals, and who does KP? Mary Magdelene may well have been an early-day roadie. This Magical Mystery Tour doesn't just appear out of nowhere and it does not wander aimlessly. When Simon Magus wanted to buy a franchise he may have told the world more than he intended.

Now I will grant that NCI overestimates its own moxie and takes credit for things nearly as inevitable as sunrise in the East but it has shown signs of having coins and organization so my suspicious mind wonders whether this is not RFE or CARE all over again and I start looking for CIA/KGB (same people) involvement. If there is indeed background funding and/or direction it is for commercial purposes so equipment manufacturers etc are the suspects but I keep remembering that Annenberg was the only one who ever made any money from TV or horse racing so who knows.

Regardless of the funding, come the Revolution the apparatchiks rarely survive. They may be allowed to fade into the background depending on how close they were to the core but if they have any expectation of leading the multitudes into the sunset they tend to be found in ditches.

Gots to get my car fixed. Another time

Hello, all!

Now we're getting somewhere! That is, there was NO way
I could believe that these NCI yahoos were the driving force
behind any FCC actions at ALL! My comments below are
set inside [brackets].

Richard McCollum wrote:

>The great unanswered question in a lot
>of this is what is expected of the ARS by
>the FCC . . .

[FINALLY, someone says something that seems to be actually
important! Just what the hell HAS been going on here with all
these changes in the ARS? In part what has to have been hap-
pening, unfortunately, is that Ham Radio's overall importance to
the powers that be has sharply declined, especially since 1980
or so. This has come through to me loud and clear! That being
the case, the service could in part be used for other, newer, pur-
poses . . . purposes having nothing intrinsically to do with amateur
radio, per se, such as use as a weapon against various FCC
targets. Ouch.]

>. . . piracy has indeed become a problem more on Marine
>freqs really than CB; there has been a group of bootleggers in

[Revolutions ALWAYS eat their children. Ask that French guy, er, what
was what his name . . . Robespierre?]

>So yes, I think the major function of the ARS in Washington is indeed to
>be a weapon against piracy. I also think it will fail miserably.

[Well, this certainly would explain a lot, including the actions of the
ARRL,
which has to be privy, at some level, to what is going on . . . which really
has nothing directly to do with the ARS. So, how do you finesse actions
which have importance to the FCC but NOT to your the vast majority of
your own members? Beyond even that, how do you finesse actions
which most of them would actually OPPOSE, but your REAL superiors, in
some ways, want very badly! Well, cranking up bogus surveys strikes me
as one way to do what you feel you have to do to keep the lights turned on.
This actually allows me to feel better about some things!

Oh, this modern world!

Well, allow me to do something similar to what you reported. If I find a ham who is using 1000 watts SSB and is perfectly copyable and ask him to switch over to one watt CW, and if I cannot copy him on CW, then SSB beats CW. Does that convince you that comparisons should be adjusted for bandwidth, throughput, and power for it to be fair?

If it's not going through a 31Hz filter, then it's not PSK31. I'm surprised you don't know that 31Hz filter is part of the technical definition of PSK31. Oh, I forgot. You are not interested in how or why digital things work. As far as digital modes go, you are just a button pusher.

> Sure didn't work at all through my 500 cycle filter on the Icom. Or should I say it

If I say since 1000 watt SSB gets through when one watt CW doesn't, will you also say that SSB is superior to CW? Fair comparisons must include bandwidth, throughput, and average power. If you refuse to be fair regarding PSK31, then why am I not free to refuse to be fair regarding CW?

Just like serious numbers of people like bows and arrows, stick shifts, and
horseback riding, the newcomers who are attracted to CW will learn it and
use it. The ones who are not attracted to CW will not. That's the same
way it has always been. A friend of mine got his Conditional in 1952 and
never used Morse code again. It would be interesting to give him a Morse
code test today.

I do not believe they have been telling you that. I believe you misunderstood
them and are spreading falsehoods about what they meant. During the process
of spreading those falsehoods, you are driving newcomers away from Morse code.

Which is why I wrote "in that part of the world".

I have a nice detail map of Japan and Korea. They are neighbors.
>

Not at all! The subject was HF amateur radio licenses without code
tests. Japan has more experience with that than any other country.
They've had 'em for decades.
>
> > You'll just have to be more clear.

But it IS possible to give some hint of the context in a post, rather
than ASSUME everone knows what you're thinking.

Of course, not giving context in a post gives you maximum wiggle and
moan room.

I don't worry about being electro-politically correct, Larry. And
nobody at the local radio clubs hates me (that I know of).

Actually, the CW tent/table has been the hit of the last several Field
Days I've attended. (Most of the credit goes to W3RV, though). Oddly
enough, the most interested are the younger hams. ("You can understand
that?" "Like listening to somebody talk" "COOL, dude!")

> it with us.

Maybe. I hope not, but maybe. And maybe something else will happen.

Way back in the early/mid-1960s there came a quiet revolution in ham
radio that went almost unnoticed. That was when SSB transceivers
became the standard HF rigs for hams, replacing separate transmitters
and receivers. (Yes, there were "matched pair" transmitter-receiver
combos, but most hams had transceivers for cost reasons). The first
ones appeared in the late 1950s but by the early '60s there was a wide
selection all over the price range.

And almost all of those transceivers were designed for SSB. Some did not even cover the CW/digital parts of the bands. Most did not have RIT, defeatable AGC or provision for a sharp filter. QSK? Forget it! Those rigs that did have CW had it as an afterthought.

And hams bought 'em like hotcakes because they were cheaper than separates and easier to use. No more zero beating, tuneup was a snap and the whole thing was in one box.

Matched to those transceivers were relatively inexpensive grounded grid linear amplifiers. All of a sudden high-power amateur 'phone became inexpensive, compact and easy, compared to the AM days. Ask most '60s hams what the dream rig was and they'd say "Collins KWM-2" even though it had no RIT, the AGC could not be defeated and there was no provision for any optional filters. (Those in the know said "Collins 'meatball' S-Line")

Yet CW operation survived and prospered. Sure, the code test brought a few new hams to the mode, but many simply wandered/ran away from CW once the General was in hand.

Then in the '70s and '80s a funny thing happened. Rigs began to include more and better CW features. Today most current low-end rigs are not very good on CW but there are a lot more good ones than before 1975 or so. There are even rigs now on the market where CW is standard and SSB is the extra-cost option.

Similar thing happened in the ham mags. They show CW every so often, but when's the last time QST had an article on how to learn the code, adjust a key, or pick out equipment with CW performance in mind? It's been a long time, lemme tellya. Sure, you can buy a book on the subject, but that's not the same as a magazine article in a mag you get every month.

What I'm saying is that the mode has already survived for decades on its merits. Despite decades of equipment poorly suited for the mode and inattention
from the amateur press, CW survives and prospers. Compare the number of CW QSOs reported on Field Day for the past two years - CW is up and phone is down! Digital? A way distant third - something like 1% of the total. (FD is a good comparison activity because there are not separate phone-CW weekends, where propagation could give one mode a big edge).

I know about all of the above because I was there. I remember asking about CW performance in the new rigs of those bygone days and getting strange looks and "waddya want that for?" responses from salesfolk and other hams.

> If you think you can "sell" CW to newcomer hams based solely on it's
> merits, then, my friend, you don't have a single moment to waste
> posting on this, or any other, newsgroup.

Y'know, you are more right than you realize, Larry.

> You've got to put on that
> checkered jacket and get out there on the sales floor! Good luck!

I never went for the Herbert R. Tarlek look, but if it works....

(No way I'd dress like that - Bailey Quarters wouldn't like it. End of story!)

> Hello, all!
>
> Now we're getting somewhere! That is, there was NO way
> I could believe that these NCI yahoos were the driving force
> behind any FCC actions at ALL

Although reading the tea leaves too closely gives one stained eyeballs. Never use conspiracy to explain what can be explained by sheer stupidity or complete indifference. You are wandering in at Chapter 52 of a long and continuing saga which features among its cast of characters an FCC that most certainly reads the election returns: Billy Tauzin sees to that. Add an ARRL that has had almost zero influence in my lifetime for any number of good reasons and couldn't conspire to buy lunch with any real confidence in the outcome -- technical competence coupled with the political instincts of a water buffalo: all in all a classic and fairly good membership organization.

The Commission has bigger things on its mind. All in all, the FCC has been rather nice to the ARS over the years; note Region 2 freq allocations like 3.9-4.0, 7.1-7.3, 50-54, 222-225, 420-430, 440-450 etc. The latter are becoming indefensible but that fight will come another day. In the regulatory arena broadcasting vs cell phones at give or take 700 MHz are the major issue with all of the fallout therefrom, followed closely by a digital TV system that shows signs of being a major disaster and the perennial problem of VHF Televison that would take a lot of heat off of lo-power FM among a lot of things if it could be flushed as the rest of the world already has. The bond market has taken some heat out of the cellphone biz but the Great Digital Disaster hangs like the proverbial sword of Damocles.

So expecting the FCC to give rat tits about the ARS is expecting a bit too much. And certainly expecting money to be spent and resources to be committed is a bit unrealistic as well. So it would not be too surprising that we occupy in the grand scheme of things the status of weapon against piracy -- bastards gotta earn their keep somehow but keep it cheap. Fight the rear guard action to keep things from getting worse. So now we know how Vinegar Joe Stillwell felt honchoing the China-Burma-India theater in WW2. It would not be too surprising if this comes pretty close to Riley Hollingsworth's charge -- do it on a shoestring; it sure as hell looks that way. And Riley picked up his straw hat and cane is dancing up a storm with props from Goodwill.

And on a broader note, this is not bad. Any effective organization with a limited budget has to make a few decisions. The village idiot can set priorities; that is trivial. The trick is what Peter Drucker calls 'posteriorities', having realized that you ain't getting beyond number five on the priority list when the pusher for number 13 walks in throw him into the street or you aren't making it beyond four. While I don't really enjoy my personal ox being gored, I have to applaud the general approach.

Now you have things like the rules of procedure that get your pronouncements reversed in court so you go out and build a record and go thru the endless motions hoping not too many witnesses insist on doing their version of Jada but give you a few quotes. BTW nowhere in the Federal system, regulatory or legal, is anyone bound by the pleadings; Federal judges like to reduce both attorneys to an open-mouthed gape now and again for drill. For this purpose groups like NCI are like Aquinas' 6th proof of the existence of God: if they did not exist they would have to be invented.

The restructuring took a long time and to my knowlege it was never explained why but my guess is that it was largely a priority tussle and the Commission finally looked at the staff like Pope Julius to Michaelangelo and told them to bring an end to it. We got thrown into the street. It was too small to be interesting.

To whatever extent the Commission is even aware of ARS it would be interesting to know what our image is. "I bet you hate me, Reeck." "If I thought about it, I probably would". Actually I would bet it really isn't too bad. But if we have any silly idea this will offer any protection when the nut-cutting begins, we are dumber than we look.

And now you know why I want to preserve such things as the integrity and humanity of the testing process even tho I expect it to become more and more a ritual. This is why I advocate a service requirement to be a VE (which for some odd reason causes NCI to turn white and shake) simply to remove the pressure on a new Extra to wave all his friends by or even the suggestion that it can be done. They can turn my neighborhood into a slum but I am retaining my self-respect.

Oh well

It is also worth pointing out that there were SEVERAL
Petitions for Reconsideration filed regarding the issue
and ALL of them were rejected by the FCC because
they raised no new issues and presented no compelling
reason to keep higher code test speeds or more classes
of license.

Given the voice and data privileges afforded by the Extra,
coupled with the fact that I have been technically qualified
for several decades, did Dick really think I'd remain a Tech+
forever? Why should I have?

Additionally, I travel internationally on business a fair amount.
Having an Extra makes it easier to get a full privilege license
(or in some jurisdictions, perhaps a license, period) than having
a Tech+ ...

Dick,

That is an outright lie ... YOU are one of the ones who keep
insisting that few or nobody will learn Morse if they are not
forced to do so to pass a test.

NCI's position is that the test is not justified. We believe that
Morse is just one of many modes, does not deserve
pass/fail/don't get a license status, and that the choice to learn
Morse or not should be a matter of personal interest/choice.

This is a very interesting line of thought: Just what influence, and
with whom, does the ARRL have? Inside the tent, the ARRL's
staff surely has great control over the maganize's content, and that
content provides the prinicpal means by which U.S. hams know
what's what in U.S. amateur radio. This is not insignificant, is it?
But beyond that, what did Ham Radio do to get so unimportant?

>The Commission has bigger things on its mind.

Once again, how come Ham Radio has ceased to rate?

In article <3C954F95.2BC74E2@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>Fess up, Len. Nobody pulled any "I am the expert" routine here except
>for you and perhaps Carl.

Heh heh heh.

You've kept that mantra for so long you are beginning to actually
believe it to be true... :-)

>You made a claim and were called on it.

Noooo, noooo. This goes way back before NPRM 98-143 ever
existed. All the big daddy PCTAs were jumping up and down
about the "superiority" in all of radio of the OOK CW morsemen.

Sorry old timer, but you and the rest of the big daddies got
called and you and the rest got your collective ears pinned
back. You've been pissed about that for a long time but can't
admit it. Admission destroys the self-perceived "superiority"
status.

>The
>fact that you've been involved with HF communications before me will,
>according to actuarial tables, even out.

Heh heh heh. Another play on the "mortality" of chronological
old timers. Don't worry. It's a phase that many middle aged
men go through suddenly realizing that they will die someday.
[see the statement of the resident 24/7 PMS sufferer that he
"will live forever." :-)]

You can no longer accept something done by the US
government in the much-larger-than-State military's radio use
of HF as beginning phasing out OOK CW over a half century
ago. Accepting something like that destroys your credibility
as a whooper and hollerer for your kind of amateur radio.
Accepting something like that goes against your elevation
of morsemanship as a personal status symbol.

>Just think, Len--if you obtain
>an amateur license, I'll have a 38 year head start on you.

Heh heh heh. This presupposes that amateur radio is a
total Lifestyle, that it is somehow more noble, glorious,
and generally superior (probably in all aspects) to any
professional experience in radio whatsoever. That's a

very personal viewpoint only...it isn't nor was it ever a
"qualification" of anything but a very personal opinion.

An amateur radio license is simply a federal permission,
a grant to operate a radio transmitter in specific EM
spectrum bands using certain allocated modes and
obeying certain technical and operational regulations.
It isn't an academic achievement certificate, never was.

Now if there is this terrible need to insult and demean
those who have differing opinions, let's just say that I
became a human 16 years before Heil did...Heil is
still working on that aspect. :-)

>> You could just as well make the entreaty "Don't be controversial or
>> nobody in here will like you." Oh, boo-hoo.
>
>This is one time that YOU can make the claim, "been there; done that;
>got the T-shirt".

I'm just repeating a stock phrase seen used by others in computer-
modem communications since 1984. :-)

I'm here just to champion the removal of the morse code test for
an amateur radio license. No more, no less...BUT...the Lifestylers
are terribly opposed to removing anything that They did to get into
that Lifestyle...they demand a license before they will discuss
anything. Here's a repeated quote from a Lifestyler:

>> >>>Who would go to a non-ham for advice about amateur radio.

...and then there's the ever-popular:

>Maybe you should have gone to accredited schools.

I did. Got the papers. Did the work. :-)

>Tell me, Len, just how did you go about cooking yourself?

I don't need the Heil method..."bring up to a boil, simmer for
a long time until way over-done." :-)

>Amateur radio does not consist solely of radio theory.

From talking with many radio amateurs, it doesn't even exist!
:-)

>Actually, failing to obtain an amateur license is not the same as
>failing the exam. If someone fails to meet his goals, he does not fail
>an exam.

Heh heh heh...still on that kick, ey? Right away there is:

>I've never DEMANDED anything of you at any time, Len. That'd make your
>statement merde de bull.

Not at all. Heil DEMANDS the achievement of a license or he will
make up a lot of bullshit about "failing some personal goal." :-)

>Writing on something is not an indicator of expertise in a subject.
>By the way, was most of your other stuff fiction?

Yes and no. :-) There's a sort of joke in electronics engineering
which concerns technical proposals. Some who have done them
call them "science fiction" in fun, a jolly-time remark to others
who've done the same. Heil doesn't appear to have done anything
like that. Since he hasn't, he will surely make some demeaning,
insulting remark about it. :-)

>They certainly can. I especially liked that part where you cooked
>yourself.

I'm so glad that Heil finds SOME joy in life! :-)

>Particularly the seagoing folks.

You may think so, but that isn't the case for US military and commercial radio services. The mode was in existance for military and commercial radio services but it was NOT in "wide use."

About the last hold-out for OOK CW outside of amateurism was maritime radio. Even so, the USN depended on data modes for the primary communications traffic in the 60s-70s.

<billsohl@mindspring.com> writes:

>> So far, the only "proof" has come from the ARRL itself.
>
>Len,
>Simple but serious question...
>Do you NOT believe the published meeting minutes of
>the ARRL Board?

Bill, I don't know WHAT to believe. The ARRL says it does
things and the ARRL reports on what is said. Except for
documentation that gets into public release at government
sites, there's no way to find out what is really done in those
meetings or other closed function.

>Should every volunteer organization be subject to
>some outside "third party" audit to satisfy people
>who are NOT members? If yes, WHY?

If they are as BIG as the ARRL and are making a profit
on producing-selling goods as a non-profit (organized)
organization, AND purport to "represent US amateur
radio" when they only support a demographically-skewed
membership, a resounding YES!

If they can't make things open, then they ought to cut out
the deception of "representation" and "democratic whatsis"
and "they are the only organization looking out for amateur
radio."

>> Here's the self-defining mechanism of this "insider" business:
>>
>> 1. One cannot be a director without having a voting membership.

>> went according to democratic principles. As a private
>> organization, the ARRL is NOT bound by the same laws that
>> apply to US government elected officials or legislative matters.
>
>NOR is any other private organization.

There are private (legal term) organizations and then there are
private (closed-door) organizations. Then there's one which is
both plus makes and sells goods.

>Why is that so hard for you (Len) to understand.?

Why is it so hard for you (Bill) to understand why skeptics are
skeptical?

If a Belief is really True, it should stand up to skeptical inquiry.

Problem is that all the True Believers are truly offended by any
and all skepticsm.

>So? Is that effort in any aspect illegal? Does the Detroit
>auto industry not pursue similar efforts to influence
>legislation favorable to its own end?

?

>> By all the recorded history and empirical evidence of human
>> behavior, those in control of some personal activity are
>> likely to both retain that control and seek a continuation of
>> their personal desires.
>
>Human nature...nothing new there.

That sort of rationalization is the same as the critics of some
control law, saying "you can't stop it if you just make laws
about it!" :-)

Okay, so you think it perfectly all right that a small group of
movers and shakers who've gained control in a membership
organization should rule over everyone else without question?

>YOU keep talking of skeptics but offer none other
>than your own self.

Ah, yes, you suddenly need documented proof of some
existance of a "group?" :-)

Skeptics abound here, on the public comment databases of
the FCC, in every random gathering of radio amateurs and
radio hobbyists and (probably) in the wastebaskets of an
organization a few miles SW of Hartford, CT. We exist.

Is ANY of what you observe illegal? unethical?

> >Why is that so hard for you (Len) to understand.?
>
> Why is it so hard for you (Bill) to understand why skeptics are
> skeptical?

I have no problem understanding that YOU are skeptical.
What is lacking is any references or examples that supports
your claim as to skepticS (emphasis on the plural).

> If a Belief is really True, it should stand up to skeptical inquiry.

Other than your demands to have access to a level
of "reporting" that no other organization
is subject to, it seems the ARRL IS standing up to
a level of inquiry that satisfies most everyone but you.
Bottom line...it isn't worth ARRL's time and effort
to try to satisfy you.

> Problem is that all the True Believers are truly offended by any
> and all skepticsm.

Not offeneded at all, just amazed that you think any
volunteer/private entity should have to satisfy all
critics.

> >So? Is that effort in any aspect illegal? Does the Detroit
> >auto industry not pursue similar efforts to influence
> >legislation favorable to its own end?
>
> ?

Lobbying by organizations that make similar
claims goes on all the time.

So far that group of skeptics is a group of one.
You can stand on your own credibility as to if
anyone believes there are any but a handful of
people that side with your thinking.

> Skeptics abound here, on the public comment databases of
> the FCC, in every random gathering of radio amateurs and
> radio hobbyists and (probably) in the wastebaskets of an
> organization a few miles SW of Hartford, CT. We exist.

You may exist, but your impact is apparently minimal and,
more to the point, the skeptics haven't convinced any others
there is any sort of problem.

Cheers,
Bill K2UNK

The progression of technology has inevitably passed by the ARS as any industry tends to do over time as it becomes increasingly specialized. And the lack of really good junque is an element as well. The biggest thing is that the emphasis has gone from dealing with people to dealing with machines, moving data etc. As a people service that in the case of CW valued the use of wetware more for grinsies and cheapitude it does not fit in too well with doing things in wholesale quantities from one machine to another. Remember the consumer side of electronics has been abandoned to the Orient, partially because of its own economics and partially because Sam pays better. You really gotta like punching an anonymous keyboard under an assumed name these days and that really is not in the Amateur tradition.

The League has overstated its influence in DC for many years and has paid the price in that when the code wars broke out both sides were firmly convinced the League was in league with Satan. It is widely thought the League is a lobbying org which in fact it cannot be and retain a non-profit postal permit among other things. But the fact is that the FCC has generally done what it is going to do with little input from those affected; and, in fact, the League has managed to keep the stupidities to a gentle ladylike belch on several occasions. When Sputnik went up, the ARS became a source of electronic genius for national defense and we were blessed with incentive licensing; now we are going to put on our Dudley suits and lead the natives in righteous paths thru our sterling personalities and interpretive dance. Not the first time, won't be the last.

There seems to be a good working relationship among the tech types lower in the orgs and you see a bit of mutual backscratch go on. The League blesses the guys who certify that you can't get local TV and need it on your DBS dish; a minor little problem but it gets Charlie off a hook.

Where the League may be criticized is its failure to be more of a pain in the drain about digital standards which are really backward. When you can do things under part 15 (Incidental transmitters) that you can't do under Part 97 the mirror is cracked.

>
> >The bond market has taken some heat out of the cellphone
> >biz but the Great Digital Disaster hangs like the proverbial
> >sword of Damocles.
>
> Again, for which frequences?

This is the new hi-definition system that will run in parallel with the existing and very obsolete NTSC so it is in the regular TV channels. Each broadcaster got another channel to do it in. As a result of several things, no new assignments above 50 are made but remember that in major areas 14-21 are also unavailable because UHF public service and commercial freqs are extended to 512 MHz, the so-called S and T bands if you own a scanner. So in a place like Chicago with the full VHF complement (2,4,5,7,9,11,13) plus some existing UHF it simply is not possible to maintain the traditional 6 channel spacing so 3 or four will have to do and quite possibly the 2 channel spacing of VHF.

The problem is that there is enough digital trash coming out to cover three channels already so I rather suspect that some ARS allocations will be taken to move T band. As well as this issue, there is the economic issue (TV is not the money spinner it once was) and some receive issues like T-Storms and MPD (ghosts) that have a habit of turning screens blue and sending digital decoders screaming for the exit. And if it works, coverage patterns will overlap like mad because digital sigs do have more effective range and obsolete existing stations. Odds are you could get STL or KC not to mention Des Moines and Little Rock and Omaha on a good day if you don't like Channel 8's version of Barbie and Ken bring you the news. This thing has more hair than a barber shop floor. Channel 8 in Milwaukee supposedly makes watching analog 8 in Grand Rapids MI across the lake virtually impossible outside of GR proper so they are not really compatible modes. Now when you realize that IL outside of Chi, IN, and a good part of OH are already UHF only and have been for centuries or so, the possibility of a major 'bloody balls up' is all too real. Then comes NYC, LA, SF, etc.

> BE reprehensible, in my view.

Depends on what you have in mind which is where this discussion began. If you are going to use ARS as a tackling dummy there is not a great amount of sense in being coy about it. The criteria seemed to be to withdraw as much staff involvement and other resources as possible, train ARS to paddle its own canoe in preparation for donning Dudley suits, and get on to bigger things. Actually it was, in light of the above, probably the right decision but it was kind of like taking a 50 story elevator ride in 17 seconds flat.

It is and while you are at it, study Element 3 which is not nearly so technical as you might believe.

Some have had good luck with the ARRL code disk and some have downloaded Morse Academy from http://ah0a.org which I am told does not fly under XP. Compared to the crap we had to work with, you guys studying code have it soft. We went 12 miles uphill in both directions dodging hail stones to study code :-)

So does your representative always vote as you wish?
Does s/he always "poll" everyone to know the latest position of the masses?

> When my local officials start acting on thier own accord, they get
> recalled.

Not all places have recall. Sometimes ya just gotta wait
until the next election.

> And when ARRL elected officials don't conduct themselves according
> to acceptable standards, THEY get recalled.

Pretty rare event. I note also that there has been no movement
to do so after the recent policy decision to not oppose dropping
the treaty requirement for morse.

> >They responded as elected directors and each voted according to
> >what they believed was the right thing to do.
>
> They have, as I always believe they have, responded according to what
the
> predominant opinion was of the electorate. It wasn't always what >>I<<
wanted,
> but the majority got the nod. And that's the way it's SUPPOSED to work.

Nope...the representatives CAN use whatever input they
want to vote on a position. There's NO requirement that they
follow some undefined majority. In the end, the next
election will bear out how far afield an individual may have gone

yet still be re-elected.

Reality, deal with it.

Cheers,
Bill K2UNK

Good point, Phil. As I recall, you were around in the days of the idiot Senator from RI or CT who wasn't going to give the FCC beans until they came up with a way to censor that rotten TV, and don't tell him about constitutionality not to mention the Communications Act.

For what it is worth, I have seen the same thing in private industry with similar effects.

Yes, we're organized in terms of presenting effective, rational arguments to radio regulatory agencies ... that's what it takes to be effective. (and whether you like to admit it or not, I think it's a fact that we HAVE been effective)

I'll take your admission that we're well organized as a compliment.

> > so my suspicious mind wonders whether

> > etc are the suspects

FWIW, I give you and everyone else who may "wonder" my personal promise, on the lives of my 5 grandchildren, that there is NO "background funding and/or direction" involved in NCI. The treasury of NCI consists ENTIRELY of voluntary donations from individual members. $10donations are BY FAR the most common, with a modest number of $20s, a much smaller number of $50s, and only a handfull or so of $100 ... $100 is the largest individual donation we've ever received.

There is NO commerical sponsorship or direction ... we have done everything we've done with member support, volunteer directors, and no outside help or influence.

We have NEVER received a donation from an equipment manufacturer or supplier ... nothing but personal checks and money orders from individual members.

I hope that that sets that matter straight once and for all.

It does as far as I am concerned and no I don't have black helicopters but I did fraud detection for a living thru the biggest compooter in the state of Wisconsin for a while so perhaps I am overly skeptical; maybe that is why I got the job. Did it damned well, too. I will take your word for the finances.

Yes, I will give you credit for organization and generating paperwork to support decisions that are/were either inevitable or already made and have sent your names in nomination for the Ira Magaziner Trophy competition as a result. If 450 page books start showing up on a weekly basis you will know you won.

Still think it would be hilarious if it all went down the shitter in Geneva. Not that I particularly disagree with you but it would still be a lot of fun.

Have a splendid life!

No, I would say that your history of the intent of 5 wpm vs 13 wpm is
reasonably accurate.

Bill, do you think he was correct in his assessment of the recent history of
code speeds?

Probably a close election with some national interest, however, the
general
public does not have clue about this! Billy did, at one time, want to
do away with the FCC (Abolish the Commission (for you high dollar
wordsmiths))
and roll everything over to the Commerce Dept.

Isn't it just awful? Why, an average of half the households in the
USA have some kind of Internet access now (including 15% of the
households with income under $5000). One in four of the population
of the USA is a cellphone subscriber.

Oh, my, a "technical assessment" of DTV!

"Traditional channel spacing!" Yes, for tube-analog designs of
the late 1940s, over a half-century old. :-)

>The problem is that there is enough digital trash coming out to cover
>three channels already so I rather suspect that some ARS allocations will
>be taken to move T band.

"T band?" The DTV channel assignments have been publicly
given for two years or so. You can find out yourself (by using
a true or anonymous keyboard) at the FCC site.

The new channels already allocated have resulted in a SURPLUS
of spectrum once allocated to TV broadcast only. Several new
bands have been created for other radio services. That's also on
the FCC site but some of them are in archives that require a
search...but are still accessible and downloadable. Don't do that
if you feel a rant will be destroyed..

>As well as this issue, there is the economic
>issue (TV is not the money spinner it once was) and some receive issues
>like T-Storms and MPD (ghosts) that have a habit of turning screens blue
>and sending digital decoders screaming for the exit. And if it works,
>coverage patterns will overlap like mad because digital sigs do have more
>effective range and obsolete existing stations.

Oh? The engineering and testing by the "Grand Alliance" group was
extensive and lengthy. It's been reported at length by the IEEE, both
on SPECTRUM and on the website.

Of the three TV receivers we have here, the oldest being 14 years old,
none of them have a problem on receiving analog channels packed
side-by-side on cable...that including ALL the VHF channels from
2 through 13. Good separation on all, no problems. We've had
digital service for a half year with over a 120 channels plus another
40+ music-only channels with the only problem in discovering a
37-year-old coax extension going bad (replaced, no further
problems).

>Odds are you could get

Well sir, you ought to hiyaku right over to da FCC and EIA and the
DTV Alliance NOW and set them straight! [don't tell 'em you saw
Bigfoot, too, though...]

"Illinois outside of Chicago, Indiana, <etc> ...already UHF only and
have been for centuries or so"? Gosh, bigfoot, we were in Rockford
just a half year ago and channel 13 was still there as it was in '56,
also two UHF channels (up from one in '56 to two now). I might
agree on "Ken and Barbie" to some extent since only Ken's
granpa was doing things in front of a TK30 a half century ago.

You are free to fully try to explain the "merits" of old NTSC TV
on a fringe area (~90 miles) and try to tell me how "good" the
old system was in 1949 through 1952. Go ahead, make a day.

If you need some cynical soothing syrup, get out that old
"anonymous keyboard" and subscribe to nakednews.com.
They have Kens and Barbies without costume.

Better yet, spend some time at the FCC and review what
has ACTUALLY happened recently (say last 5 years) in and
about the old analog TV spectrum...and cruise on over to the
NTIA and check out their 2001 analysis of spectrum needs
for everyone, not just the government...or start some sort of
money-making scheme to buy a TV set and antenna made
after 1960. In dollar figures the new, better, many-channel TV
sets on today's market are less expensive than those of 1960.

>Some have had good luck with the ARRL code disk and some have downloaded

What, no ice or snow? Geez, whatta complainer!

Why is there a need for a code test at all in 2002?

That's what it was, Len--a play on mortality based in fact.
By the way, I thought YOU were the resident 24/7 PMS sufferer.

> You can no longer accept something done by the US
> government in the much-larger-than-State military's radio use
> of HF as beginning phasing out OOK CW over a half century

This would be a peculiar statement even if it was coherent. Now I'm
starting to have doubts about those writing skills of yours.

> Accepting something like that destroys your credibility
> as a whooper and hollerer for your kind of amateur radio.
> Accepting something like that goes against your elevation
> of morsemanship as a personal status symbol.

Are you now claiming that I haven't accepted that the U.S. government
does not use morse much anymore? It hasn't changed my status in being
skilled in the use of morse one iota.

> >Just think, Len--if you obtain
> >an amateur license, I'll have a 38 year head start on you.

> "qualification" of anything but a very personal opinion.

It doesn't presuppose any such thing. It means that if you obtain your
ticket tomorrow, I'll have a 38 year headstart on you. You've missed
decades of enjoyment of amateur radio.

> An amateur radio license is simply a federal permission,
> a grant to operate a radio transmitter in specific EM
> spectrum bands using certain allocated modes and
> obeying certain technical and operational regulations.
> It isn't an academic achievement certificate, never was.

I've held federal permission to operate an amateur radio station for 38
years (using certail allotcated modes and obeying certain technical and
operational regulations). Where did I state anything about an academic
achievement? I've had 38 years of enjoyment of amateur radio while
you've frittered.

> Now if there is this terrible need to insult and demean

treading on the traditions of amateur radio and throw darts at the ARRL.

While we're at it, Leonard, what did you say to those fellows which you
claim (I haven't seen 'em so I doubt that your claim has any base in
truth) when they asked you to help them with the morse code?

>
> ...and then there's the ever-popular:
>

But you told us, using those superlative writing skills, that you cooked
yourself.

> >Amateur radio does not consist solely of radio theory.
>
> From talking with many radio amateurs, it doesn't even exist!
> :-)

I've not many any radio amateurs who believe that radio theory does not
exist. Can you produce one? I note that you don't deny my statement.
What do you offer the aspiring young ham in the way of the things I
asked you about?

> >Actually, failing to obtain an amateur license is not the same as

> Not at all. Heil DEMANDS the achievement of a license or he will
> make up a lot of bullshit about "failing some personal goal." :-)

I have not DEMANDED that you obtain a license, Leonard H. That isn't true. I've pointed out that the fact that you are not a licensed ham gives your opinions less credibility than they would otherwise have.

> >Writing on something is not an indicator of expertise in a subject.

> who've done the same. Heil doesn't appear to have done anything
> like that. Since he hasn't, he will surely make some demeaning,
> insulting remark about it. :-)

First you say, "Heil doesn't appear to..." and later you go on, "Since he doesn't..." It isn't clear whether you mean that you believe that I've had anything published or whether you mean that I've not had anything published in amateur radio periodicals or books.

I've written. I've written for Ham Radio Horzons, CQ and wrote a chapter of OH2BH's book "Where Do We Go Next?". I did some illustrations for another amateur radio book. I'm just finishing up a book on my travels with a slant toward the amateur radio operations. It'll be sold only on CD and will feature video clips, sound files and photos. Would you like to buy a copy?

> >They certainly can. I especially liked that part where you cooked
> >yourself.
>

I do indeed find some joy, Len. You certainly help in keeping me entertained.

What? No favorite German on the bus? How bout a good "knuckle dragging
lowlander" joke? You must be running out of material.

And Germans (like
> myself) aren't a bunch of lazy whiners. They get the job done.

Til the 'Mericans showed up. Whose Air Force were you in? Oh, that's
right, you are a blue-helmutted "citizen of the world."

We should have come up with a 7th license class at that point and moved all
the ARRL members to it.

1. Novice
2. Tech
3. Tech Plus
4. General
5. Advanced
6. Amateur Extra
7. CW Only

So organizations like the American Legion, the NRA, AARP are guilty of
something too. They purport to represent some segment of the American
population and serve a demographically skewed membership. You might
have uncovered some things which may make life dangerous for you.
Better keep mum.

Still wondering what's going on up in the lodge hall?

> >Why is that so hard for you (Len) to understand.?
>
> Why is it so hard for you (Bill) to understand why skeptics are
> skeptical?

You are beginning to sound like Harold Pransky. Harold lives up in Washington or Oregon and used to send 9 x 12" envelopes to the embassy in Gaborone, Botswana about once every six months or so. We didn't have to open the envelopes to see Harold's messages. They were all written in crayon, magic marker and colored pencil on the outside. There was nothing on the inside.

Harold had obviously uncovered some sort of conspiracy since his envelopes were usually addressed to "The American Embassy, Puppet masters of the Government of Botswana". Nobody could figure what tripped Harold's trigger on Botswana much as no one can understand how your amateur radio fetish came to be. Mr. Pransky's message seemed to be, "E=mc2=(drawing of a mushroom cloud). I understood his message better than I understand yours.

What small group of movers and shakers? The board is elected by us.
There is a director from each ARRL division. The candidates are
nominated by those within each division. By the way, we don't elect
these folks to rule over us. We're also permitted to question.

I wish I had a video, and wish I'd saved a couple of letter responses I've received from "my representative" when I've visited their office and/or written letters. More than once I have literally been told, "my constituents do not fully understand this issue and I will vote as *I* best see the issue." No joke, been told that a few times.

or
> Congressional vote?
>

How many people are *that* motivated, Steve? I mean, really. Even with the crap in the Clinton Whitehouse there just wasn't enough public outcry to do a thing about it. Hell, Congress even acted against the will of the people on that one! The inaction against that was amazing to me.

Bill said "rare" not implying it never happens. That's the first time I've ever heard of it happening...and was that at the will of the Section Membership, or the ARRL leadership? There's a difference.

>
> And there IS a requirement that they represent us per our wishes.
>

There's no such requirement...unless you are speaking of intrinsically. There is no obligation a governmental representative has to do as his/her constituents wish. Most act within their boundaries and get away with a whole, whole lot--leaving many people to feel as though they have no power to change a thing. Why? Because good little rep is up there acting so

within the boundaries that not enough people get stirred enough to do a thing about it.

They will more generally be allowed to stay in office because they a)have more money than their opponent, b) have a couple of gimmee votes during their term that people really liked, c) have more exposure, etc., etc.

Oops better hurry Bill. The BoD (no doubt on a
recommendation by the Newington Crowd) just voted to strike
the minutes from the QST. The motion claimed that
eliminating 12 b&W pages a year from print would justify the
cut. They also cut Section News.

Good job. Voted in, aye? I assume that you also got the flashlite test. Point it in one ear and see what sort of interesting pattern is projected on the wall.

A good club is a joy. If you can get into one that doesn't take anything super seriously and keeps the close-order drill to a minimum it adds a lot.

But with your background, try not to be Field Day Chairman for a year or so. One of the minor problems of having an outdoor hobby. You would be amazed how popular telescopes are at FD.

A lot of what this is about is making a plan and executing it. That you have done and a tip of the hat to you.

Knock-Knock...may be preaching to the choir here but I'll say it again: the ARRL is losing/has lost membership because, at least in this Section, there is little to no discussion on the air of ARRL happenings... No incentive to join, because there's nothing "in it" locally. No, I don't feel that way, but I bet on a dollar that many do feel that way, in the NTX Section--and we hear Jim Haynie on the air all the time.

Wish HQ could inspire Sections to be more active. Oh, and nightly NTS nets don't do it...the idea of net participation for most hams is met with dread...LOL

You just may end up in court for the above, yourself. You have other avenues available, such as a report to the FCC, with recordings of the things you speak of. All you get here in this newsgroup is...well, nothing. And, if this person happens to see your post--you are the one who may end up in court on the wrong side of a lawsuit.

Caution advised.

Hello, all!

Well, I ** did ** pass the Technician test this evening,
with 100 percent. I was in competition with another
fellow (we're both long-time members of the local
astronomy club) and he got 100 percent as well. If
I had missed one, well, I never would have heard the
end of it, just because . . .

We both took the test seriously and studied hard.

My neighbor down the street, the guy who started me
down this road, took my dues for the local club last
week and they voted me in a few days ago, on his
word that I would pass. So, the heat was REALLY on!

I'm very happy to at last be a ham and have already
started on the General book and the CW. Also, the
amateur satellite programs have a lot of interest for
me, particularly because I give fifteen to twenty
programs per year on astronomy, about half of them
to schools. Now, I can have a radio component in
those programs!

Val Germann
Columbia, Missouri
(waiting for a call sign on the QRZ site!)

That wouldn't be a very good idea, Val. BTW I hope she doesn't take
that Daisy to school with her. Why is a 9-year old in possession of
such a thing, anyway? I was 14 before I ever handled a .22 rifle, and
never owned a handgun until I was almost 25.

>She's a big fan of Jeeves and Wooster on PBS.

I'm a big fan of anything with Fry and Laurie in it -- the Jeeves and
Wooster series was great -- wish they'd re-run it locally, but all WHYY
in Philadelphia does is run 3-week long pledge breaks every two months.
All we get to see are PH.d's giving motivational lectures and the Three
Tenors, that kind of crap -- between the whining and the phone numbers
on the screen. Personally, I'd rather watch the commercials. At
least they inform me of products and services I'd be interested in as
a consumer. I have no use for a WHYY-logo'ed 100% cotton shopping
bag as my free gift for a $60 membership pledge!

Brian:

They got Mexicans in Germany? They must have got their wet backs
from swimming across the Atlantic, then. Of course, someone has
to harvest all those cabbages and potatoes, and pick those grapes
in the vinyards. Axeually, I think Mexicans serve a very useful
purpose. Someone has to do the menial, back-breaking manual
tasks of the world. I say they are perfectly welcome here in the U.S.,
as long as they are legally emigrated, card-carrying, and learn to
read and speak enough American English to get along. In fact, if
they ever figured out that by using their human intelligence, initiative,
and ingenuity -- and got a good education, learned to speak English,
and dropped their goal of living off of the American Welfare State,
they could be a very powerful force in this country in a generation
or two. However, if they had what it took to get that kind of power,
they would have their own paradise down in Mexico, and wouldn't
need to come up here, would they?

If Bush signs this Amnesty legislation for the illegal XE's, he will have
lost my vote in '04 -- war or no war.

>So does your representative always vote as you wish?
>Does s/he always "poll" everyone to know the latest position of the masses?

Voting as >>I<< wish..??? Of course not, not always, but they CERTAINLY
do not simply do as they see fit, either!

One very popular US President tried that "silent majority" tack for taking
his own advice, and you see what it got him!

> When my local officials start acting on thier own accord, they get
>> recalled.
>
>Not all places have recall. Sometimes ya just gotta wait
>until the next election.

Don't have recall? What public office cannot be recinded by popular or
Congressional vote?

>> And when ARRL elected officials don't conduct themselves according
>> to acceptable standards, THEY get recalled.
>
>Pretty rare event.

Excuse me? Without going back through the last couple month'sQST's, an SM
was removed for just such reasons.

>I note also that there has been no movement
>to do so after the recent policy decision to not oppose dropping
>the treaty requirement for morse.

EXACTLY what I have been saying to Clay. While it certainly remains a
topic of conversation, the "Morse Code" issue is not the firebrand it used to
be.

Just as I said of my own opinions...I don't particularly like it, but it
was given it's day in the court of public opinion, and now it's time to move
on. There are REAL policy issues to get on with, yet they still are ignored by
those who figure someone else will do something about it.

>Nope...the representatives CAN use whatever input they
>want to vote on a position. There's NO requirement that they
>follow some undefined majority.

In my Congressional District there is no "undefined majority". It IS my fellow voters in this district.

And there IS a requirement that they represent us per our wishes.

>In the end, the next
>election will bear out how far afield an individual may have gone
>yet still be re-elected.

If the representitive has stayed the course with popular opinion of the constituents all-the-while having not been caught doing dope or molesting teenage pages, they stand a pretty good chance of keeping thier job.

>Reality, deal with it.

I am not the one having the problem here, Bill.

> The BoD (no doubt on a
>recommendation by the Newington Crowd) just voted to strike
>the minutes from the QST.

Clay, let me tell ya' what would happen if THIS Newington employee started to tell the ARRL Board what to do...

Better advice would be to download the minutes for free from the ARRL Web page.

http://www.arrl.org/announce/board.html

In addition to the minutes that used to be printed in QST, all of the reports of the various Board committees are also available at the same URL.

> The motion claimed that eliminating 12 b&W pages a year from print would
> justify the cut.

And I agree. I would rather see those pages used for something else and download the minutes from the web site.

>They also cut Section News.

Perhaps you should download the minutes and read them, Clay. They did not cut Section News at this time. They voted to postpone that decision. If you feel that Section News should remain in QST, let your Director know.

In the mean time, they are expanding the Section presence on the ARRL Web. This will allow SMs to put up web-based Section News that can contain photos, hyperlinks, sound clips and the like.

>> > >Should every volunteer organization be subject to

I hope to have some fun AND study for the General!
For instance, I'm now shopping for a radio to use on
the club repeater, which is definitely fun, and I'm assembling
parts to make an antenna to raise those satellites!
I have access to a computer-controlled telescope
that could track satellites while mounting that antenna.
It's gonna be great -- I hope!

Thank you, Val. I had an app they finally sent me in the mail sitting on the counter in my DND file (Die Natural Death) and finally got motivated to do the deed on line. So after a long absence I can now claim to be a member of the American Registry of Rotten Lids.

A number of stiffs having passed from the scene, it is time to support such things as the Education people and Ed's merry band of thieves and brigands.

Dick N BK, from Nebraska -- World's ugliest license plates.

Living in WI for 18 years I got to see Mike progress from resident wiseass to pretty funny guy. WI runs a double network, one side talk the other NPR/Classical so you kind of get spoiled. His show comes out of PRI which is Minnesota Public Radio's alias.

You mentioned the lack of cheapitude. At 8:50 AM the local station carries a PRI show done from one of MPRs two stations in Los Angeles and Morning Edition often carries a promo for a contributor 'supporting NPRs West Coast Expansion'. What in hell is going on???

And on TV we spend Saturday doing Men in Toolbelts with Norm Abrams' incredible workshop that is increasing looking like one giant infomercial. The good Mr. Morath at WGBH probably has more special partnerships than Enron. Norm has done more for biscuit-joinery than Armstrong did for FM.

And for one of life's minor mysteries, does anyone actually broadcast El Presidente's radio speech every Saturday? You couldn't displace Texaco and the Metropolitan Opera with a nuclear device. Ain't nothing like scrubbing your bathroom to Carmen.

NPR used to be "National Public Radio" and funded
mostly by "The National Corporation for Public
Broadcasting," which was funded by Congress, more
or less. Staring about 20 years ago, NPR & Co. began
to be seen as WAAAY to liberal and so began to be
de-funded. Today they're out there on their own and
have to get money any way they can. It's expand or die.

>And on TV we spend Saturday doing Men in Toolbelts
>with Norm Abrams' incredible workshop that is increasing
>looking like one giant infomercial.

It has to if it wants to stay on the air!

>The good Mr. Morath at WGBH probably has more
>special partnerships than Enron.

No doubt!

>Norm has done more for biscuit-joinery than
>Armstrong did for FM.

You got that right . . . and I've my biscuit-joiner, you betcha!

>And for one of life's minor mysteries, does anyone
>actually broadcast El Presidente's radio speech every
>Saturday?

I know somebody does because I've scanned through it
in the car. But exactly who that is, er, I couldn't say!

>You couldn't displace Texaco and the Metropolitan Opera
>with a nuclear device.

No. In fact for me "NPR" means: "National Petroleum
Radio." After all, Mobile made all those Masterpiece
Theater and Mystery programs possible!

>Ain't nothing like scrubbing your bathroom to Carmen.

Or, joining those biscuits!

Val
(In "Zero-Land", too!)

The new plates are three shades of yellow and orange with unreadable black letters featuring a website no less. Up in the corner is the sun but it looks like an orange. Even the winning artist that designed them is less than impressed by the rendition. Only plate I ever saw that can clash with school-bus yellow.

Now to top it all off, three of the 93 counties use a 3x3 numbering system while the rest use the old county number. So NXP 289 and 20-A1234 are both legit. Let's see Barney Fife figure that one out.

Back in days of old, Missouri plates indicated the expiration month with the first letter so some bright soul when the call plates became available in the 40s made them all expire in October, the usual month indicated by W so as not to confuse Barney. Well in the 50s comes K calls and in the 70s

came N and A and they all expired in October. So one quiet summer day in about 1978 or so we get the call on the repeater from a K&#65533; who was being hauled in in Marlboro, in StL County on old 66 and a notorious speed trap. So a raft of us showed up registration in hand to convice the locals that all of the ham calls expired in October. The killer was AA&#65533;A.

Back before Mo went with message plates, the only unique plates were amateur and the 1-9999 plates where you had to be a poobah or know one. You have not lived until you pull up to a stop sign in Ladue with a 4-long on a ratty 73 Dart and received a filthy look from a car that cost more than your new house.

Whatever else, we don't have to look for the cactus anymore to tell if you come from Misery or Arizona -- damned snowbirds.

Now we've taken a survey of Ham operators in Cornelia, Georgia and found that some of them are Shortwave Pirates. KE4ENX is the famous Radio Bob and when he ain't jamming the local VHF repeaters here and in Cleveland, GA, because he opposes code and won't get a license upgrade from Tech, he's yapping on 27.455 Childrens Band causing trouble, calling people names, making false accusations. Eveytime he tunes up on 6955khz he blocks out TV's all over Mt. Airy and Cornelia and us legal Hams get blamed. Considering there aren't but a few of us in Cornelia, does anyone have any recomendation as to what we can do about KE4ENX and his illegal Radio Bob transmissions? Legal suggestions only, he ain't worth going to jail over!

1986. California Hams!

Hello, all!

Looking at the population data I put up earlier,
based on the QRZ site, there is a significant
difference between California and its 100,000
Hams and the 100,000 Hams in each of my two
other multi-state groupings.

For instance, the number of Technicians in CA
is about 41, 500.

At the same time, NY, OH, PA & MO can
muster only about 30,500 Techs.

And TX, FL, NM and AZ have about 33,500.

That's a BIG difference, I think.

Also, summing the "Top Three" licesnse classes,
EX, AD, GEN, we get:

For CA a total of 39,700.
For NY, OH, PA & MO we have 48,500.
For TX, FL, NM and AZ we have 47,800.

Once again, a significant difference between
CA and the other two groups.

The implication is . . . more growth in CA since
the Technician group would tend to be younger?
I did expect to see more Extras, etc., in the
TX, FL, NM and AZ group, because of the fact
that people do retire to those three states in
fairly large numbers and so the average age of
Hams there should be, er, more senior!

Valentine Germann wrote:
> The implication is . . . more growth in CA since
> the Technician group would tend to be younger?

Here's another possibility (based on my experience at Intel).
Many highly technical people consider learning Morse code to
be a waste of their technical talents and therefore settle
for the nocode Tech license. Since Silicon Valley and LA
contain more than the average share of highly technical
people, having more than the average number of nocode Techs
doesn't seem unreasonable based on my experience.

Of the 50-60 hams Elmered by my team of VEC's at Intel, the
nocode Techs tended to be the design engineers and managers
with graduate technical degrees. The coded group of hams
tended to be the networking and lab technicians and marketing
engineers. In other words, the higher the technical degree,
the less likely was the person to be interested in learning
Morse code. The moral IMO? Recruit new hams when they are
young and more likely to be interested in CW while Morse
code is easier to learn. I would like to see a new "novice"
license, akin to a learning permit, with reasonable privileges,
that expires on a youngster's 18th birthday.

>Oh, I see...

Your corrected vision is still 20/400. :-)

>Is that what happened, Len? I'll have to admit, as a fiction writer,
>you're pretty good.

It's always nice to get compliments from such an authoritative
writer of myth and fantasy... :-)

>That's what it was, Len--a play on mortality based in fact.
>By the way, I thought YOU were the resident 24/7 PMS sufferer.

"PMS" is Powerful Marine Syndrome. "Marine" as in USMC. :-)

>This would be a peculiar statement even if it was coherent.

Fact established by the US military way back in 1948.

Mythologists and fantasy writers don't want to accept planning
that is carried out and proven to all others.

>Now I'm
>starting to have doubts about those writing skills of yours.

Poor baby. Send a nasty letter to my editors, ok? :-)

>Are you now claiming that I haven't accepted that the U.S. government
>does not use morse much anymore?

Absolutely.

>It hasn't changed my status in being skilled in the use of morse one iota.

BFD. You can nominate yourself to the nearest IOTA list. :-)

>It doesn't presuppose any such thing. It means that if you obtain your
>ticket tomorrow, I'll have a 38 year headstart on you.

A "38 year headstart" is only in your head. :-)

>You've missed decades of enjoyment of amateur radio.

Nope. I've had decades of enjoyment as both a hobbyist and
professional working in the radio-electronics industry.

>I've held federal permission to operate an amateur radio station for 38
>years (using certail allotcated modes and obeying certain technical and
>operational regulations).

Ignoring finger-slips (due to rage drool?) in "certail allotcated..." let's
analyze the quote above. I've had several kinds of federal permissions
to operate over a much wider range of frequencies and modes for 49
years...and did it. Got paid for doing it all.

Some of that operation was IN amateur bands; remember that
amateur frequencies aren't all exclusive to amateurs. Most of it
was "outside" amateur allocations.

>Where did I state anything about an academic achievement?

Nothing...but these postings are all in public, not private, and
the resident 24/7 PMS sufferer will reply (and did). :-)

>I've had 38 years of enjoyment of amateur radio while
>you've frittered.

That's nice. For you.

I'm not a food specialist and not fond of fritters. Never made
any. :-)

I've spent over 50 years thoroughly enjoying the much larger
avocational and occupational radio world, meeting technical
changes and problems head-on and solving them.

What have I missed? Oh, yes, I've missed marching in ranks
in the endless re-creation of "pioneering radio" traditions that
seemed more like a Rennaisance Pleasure Faire production
than anything else.

You can say I've "missed working DX," "collecting the rare
ones," and even "being a rare DX station." No problem to me
since I got into the HF comm biz early by DOING DX 24/7.
There's some loss of emotional feel-good in "magic" when
one can pick up a handset and talk immediately to a
counterpart also on duty many thousands of miles away.
That was a half century ago.

Collecting QSL cards is a nice thing. So is stamp
collecting. I've "worked" a station ON the moon without
using CW. No big thing. Why all the furor over "weak-
signal moonbounce?"

Your PMS-suffering brother touts the wonderfulness of having
"one's own radio station!" That's nice for some, but having
lived IN an antenna farm far larger than the fabled Palos Verdes
Penninsula amateur antenna place that was, it isn't a personal

inducement. It's far from a universal desire.

>Maybe in 16 years I'll have a sudden revelation and become as you are--a
>happy old man.

Your prognosis is very pessimistic. Once a bossy, nasty loudmouth,
always a bossy, nasty loudmouth. :-)

>Why the parakeet imitation if you didn't mean what you wrote?

"Parakeet imitation?!?" Did someone tell you to eat the bird? :-)

>...and a fine champion you are, Len. You've managed to honk off
>numerous fellows who've held licenses for decades as you go about
>treading on the traditions of amateur radio and throw darts at the ARRL.

Heh heh heh...I've managed to "honk off" a crowing semi-pro (who
was THE ONLY ham in Guinea-Bisseau) on a professional basis
and he could never forget that! Poor feller, he got all uppity. :-)

Heh heh heh...go sit on a Rittysnitch and see if you "honk." :-)

>I do indeed find some joy, Len. You certainly help in keeping me
>entertained.

Goody. Now complete your day's recreation and go find an AARP
member to pistol-whip with your J-38. You can have lotsa fun
at the Legion hall telling the Legionaires about it...

BTW, you ARE eligible for AARP membership. :-)

>For TX, FL, NM and AZ we have 47,800.
>
>Once again, a significant difference between
>CA and the other two groups.

Not really. Here are the 2001 estimates for the populations of
those states:

CA: 34,501,130
NY, OH, PA & MO: 48,301,776
TX, FL, NM & AZ: 44,858,010

California has more hams per capita in all classes. It just
has somewhat more of the higher classes and a lot more Techs.

Trying to correlate this with anything in particular seems
hopeless. For example, California also has a signficantly
larger economy per capita then your other two groups, so maybe
it proves that people with higher discretionary income are more
likely to blow some of it on radios? It also has a larger base of
technology industries, has generally better mountains near the
cities for repeaters, has a delightfully mild climate near the coast,
has more than its share of both tree-hugging liberals and technophile
libertarians, ranks 49th among states for per-capita electricity
consumption, doesn't number freeway exits, and simultaneously has
some of the nation's best universities and worst performing public
schools. Pick any factor you like.

Well, maybe, although I find it interesting that "highly technical people" would be UN-interested in a mode that allows highly efficient international communication on just a few watts, and with equipment that can fit inside a lunch box. Sounds like just the meat for NASA-slash-DOD contractor types! Maybe your group (see below) somehow failed to explain things properly to your highly-technical recruits!

>Of the 50-60 hams Elmered by my team of VEC's at

Fascinating. Perhaps we might be privileged to know what these two groups hoped to get out of Ham radio, in your view. That is, it seems somewhat odd that the folks with the lower incomes and less technical training would be MORE interested in the most efficient mode on HF. Of course, that would't have anything to do with the people who were introducing these folks to Ham Radio, would it? I didn't think so.

>The moral IMO? Recruit new hams when they are young
>and more likely to be interested in CW while Morse

Well, fine, but it's going nowhere unless the Elmers give a rat's patoot about CW -- and SAY SO! Your attitude toward CW in Ham Radio is bizarre, to me. You say you're a big user of the mode but, well, er, that's hard to believe. It's as if you went to an automobile dealership and the guy who is supposed to be selling you a Tahoe, because that's what's on the floor next to him, and it's

what the dealership selling, AND what he says he drives,
is instead saying, "No, you don't what THAT! You'd
have to take a TEST, which seems unfair to ME, to be
able to drive it legally! How about a nice bicycle instead!"

>
>California has more hams per capita in all classes. It
>just has somewhat more of the higher classes and a
>lot more Techs.

No, it has LESS of the higher classes, in absolute
numbers, and VASTLY less per capita! Ah, yeah,
CA has a lot more Techs, absolutely and relatively,
and, er, that's what I was referring to!

Ask any statistician . . . it IS significant. That is, the
factors behind those numbers are important to Ham
Radio and it's future, most likely.

>Trying to correlate this with anything in particular seems
>hopeless.

To you, maybe, but the folks at ARRL likely care!

>For example, California also has a signficantly larger
>economy per capita then your other two groups, so
>maybe it proves that people with higher discretionary
>income are more likely to blow some of it on radios?

That would seem arguable BUT, it would not necessarily
explain the internal differences by itself.

>It also has a larger base of technology industries, has
>generally better mountains near the cities for repeaters,
>has a delightfully mild climate near the coast . . . [snip]
> Pick any factor you like.

Sorry, can't do that! I'm interested in what's actually
going on with those numbers!

>I think Ryan is on to something. Hey Ed...

ARRL at one point in the not distant past had a 3-month trial membership at a substantial discount. I don't think there were many takers. I don't know if it is still available, although I suspect not because I couldn't find anything on the ARRL Web site. Of course, as anyone who has searched the ARRL Web site, that doesn't necessarily prove anything. :-)

ARRL does offer Senior rates at $34 a year, if memory serves, and has substantial discounts for young hams if they are the oldest ham in their household.

And either way, Ed doesn't get to make these policies. I suggest that those that feel ARRL membership should be available to new members at a one-time discount should let their Division Director know their views.

Highly technical people, on the average, are not interested
in efficient international communications. A lot of them
are millionaires UN-interested in efficiency or cost. Every
engineer I know who cashed out of Intel in the late 90's
after working there for 15 years, left Intel a millionaire.

> Fascinating. Perhaps we might be privileged to know
> what these two groups hoped to get out of Ham radio,
> in your view.

Most of the Techs were happy to get valley wide coverage
from mountain top repeaters around the Valley of the Sun.
To the best of my knowledge, none of the M.S. or Ph.D. degreed
engineers who became hams were interested in HF. About eight
of my camping buddies became Techs because 5w CB was unreliable.

> you're a big user of the mode but, well, er, that's hard to
> believe.

Pass the code test along with your Tech and let's set up a
schedule. I'm trying to gain a modicum of competence on
an electronic keyer. You seem to be confusing the code
test requirement with CW the mode, strangely enough,
just like Dick does.

2000. Death to Ham Radio at the hands of it's own operators

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-19 22:43:35 UTC
From: "Phillip A Manning (KC8TAU)" <kc8tau@fuse.net>
Message-ID: <0fff9uke3qjcqqnc8oi1v8ubr8t5166af6@4ax.com>
Source record: 37940
Cross-posted to: alt.radio.amateur,alt.ham-radio.vhf-uhf,rec.radio.amateur.misc,rec.radio.amateur.policy

I have been recently toying with the idea of putting a dual band (2m/440) amateur rig in my car. To assess if the investment would be worth it (seeing as how I already have a mod'ed commercial 440 rig in my car for amateur and GMRS) I borrowed a friend's scanner and listened to many of the "active" frequencies in this area, the greater Cincinnati area. I found a few very active places, which got my hopes up until I started listening to the content of these channels.

It appears to me that the Greater Cincinnati area is "under siege" by a very few groups of amateurs. I noticed that the diversity in radio is nil the same people on all the used frequencies, and even thou they clam to be an "open" group if you listen to them new people with new ideas are ran off. On some of the repeaters just a normal conversation is cut off for tying up the repeater. On a clear sunny day not during peak traffic times why should a conversation on a Ham repeater that it observing the courtesies of normal ham communications (i.e. waiting for the repeater to drop so any other station calling could get in if they wanted to) be cut for the reason of wanting empty air. That to me sounds like non-effective use of frequency space.

Now that we are on frequency space let me just say that it seems a little excessive for one group to control six different repeater pairs across two different bands. Five of those in the 2m band alone. This to me sounds like a lack of diversity, and if you track some of there frequencies you will find that one of them is in a garage on a mag. mount antenna just to tie up the space so that no one else can use that space for a new repeater and haven forbid some new opinions and views.

If you live in or near Cincinnati you may know who I am talking about. CRA (Cincinnati Repeater Association) seems to be the only way to get on the air in this city, and if you try to put up a repeater of your own you will find that all the vhf pairs are taken. Now, if this group is truly interested in keeping ham radio alive they would welcome new people and points of view, but to the contrary if you disagree with any member of the group you will find yourself subject to jamming and "the cold shoulder" until you just give up. These people do not extent their damaging attitude into just a standard radio group, but the "leaders" of the group also seem to run all activity available to hams in this area like: Sky Warn Group, QCEN (Queen City Emergency Net), and ARPSC (Amateur Radio Public Service Corps). So as you can see if you want to do anything in this city in ham radio you have to subject your self to a group that I have heard, aptly referred to as the CRM (Cincinnati Repeater Mafia).

So you may ask, what can be done about such atrocities? Well I have added contact information to a key person at the bottom of this post if you know of anyone else who may help please let them know and if you would let me know and I will forward a copy of this letter to them so they may hear my argument as well. Please contact someone and let them know that the hams in Cincinnati are being oppressed by local radio groups of, and we would like to take the air waves back for the hams and not leave them to the death they are suffering here in this great city.

It was just that your statement didn't seem to have much basis in fact.
Where I live, that's called fiction--or worse.

> >That's what it was, Len--a play on mortality based in fact.
> >By the way, I thought YOU were the resident 24/7 PMS sufferer.
>
> "PMS" is Powerful Marine Syndrome. "Marine" as in USMC. :-)

That isn't the common use of the term at all. If you went about saying
that to a group of middle-aged women, you be hacked to death with
fingernail files.

> >This would be a peculiar statement even if it was coherent.
>
> Fact established by the US military way back in 1948.

It was difficult to see a fact beneath all of the clumsey writing.

> Mythologists and fantasy writers don't want to accept planning
> that is carried out and proven to all others.

I'd assume that you have some knowledge of what you say based upon your
long experience.

> >Now I'm

> BFD. You can nominate yourself to the nearest IOTA list. :-)

You don't have any amateur radio "big deals" in your life, Len. You
have yet to demonstrate that you can even attain the most basic license.

> >It doesn't presuppose any such thing. It means that if you obtain your
> >ticket tomorrow, I'll have a 38 year headstart on you.

My claim is obvious and easily verifiable.

> >You've missed decades of enjoyment of amateur radio.
>
> Nope. I've had decades of enjoyment as both a hobbyist and
> professional working in the radio-electronics industry.

Get it straight, will you? This isn't a professional radio newsgroup.
This is an amateur radio newsgroup. I didn't say anything about your
professional use of radio. I said that you've missed decades of
enjoyment of amateur radio.

> >I've held federal permission to operate an amateur radio station for 38
> >years (using certail allotcated modes and obeying certain technical and
> >operational regulations).
>

We aren't discussing that, Len. I mentioned amateur radio. After all,
this is an amateur radio newsgroup. We cant' take money for doing what
we do on the ham bands.

> Some of that operation was IN amateur bands; remember that
> amateur frequencies aren't all exclusive to amateurs. Most of it
> was "outside" amateur allocations.

...but not as a ham, Len; not as a ham.

> >Where did I state anything about an academic achievement?

So you admit that I didn't say anything about academnic achievement and
yet you through it in as though it had been brought up. Hmmmmm.

> >I've had 38 years of enjoyment of amateur radio while
> >you've frittered.

>
> That's nice. For you.
>
> I'm not a food specialist and not fond of fritters. Never made
> any. :-)

Just a couple of posts ago you were discussing cooking yourself.

> I've spent over 50 years thoroughly enjoying the much larger
> avocational and occupational radio world, meeting technical
> changes and problems head-on and solving them.

That isn't under discussion, Len. This isn't "I was a big man in professional radio". It is an amateur radio newsgroup. All you've done here is to dismiss the accomplishments of radio amateurs.

> What have I missed? Oh, yes, I've missed marching in ranks
> in the endless re-creation of "pioneering radio" traditions that
> seemed more like a Rennaisance Pleasure Faire production
> than anything else.

There is no requirement for a radio amateur do anything remotely resembling the above fantasy.

> You can say I've "missed working DX," "collecting the rare

> since I got into the HF comm biz early by DOING DX 24/7.
> There's some loss of emotional feel-good in "magic" when
> one can pick up a handset and talk immediately to a
> counterpart also on duty many thousands of miles away.
> That was a half century ago.

I could add: "What have you done lately". Instead, I'll simply point out that what you did in the military isn't really of consequence to amateur radio in the here and now.

> Collecting QSL cards is a nice thing. So is stamp
> collecting. I've "worked" a station ON the moon without
> using CW. No big thing. Why all the furor over "weak-
> signal moonbounce?"

Why not read a few articles and find out? No ham is required to send QSL cards or to solicit them from others.

> Your PMS-suffering brother touts the wonderfulness of having
> "one's own radio station!" That's nice for some, but having
> lived IN an antenna farm far larger than the fabled Palos Verdes
> Penninsula amateur antenna place that was, it isn't a personal
> inducement. It's far from a universal desire.

I don't think anybody made a statement about living in an antenna farm. I don't have a brother.

> >Maybe in 16 years I'll have a sudden revelation and become as you are--a
> >happy old man.
>
> Your prognosis is very pessimistic. Once a bossy, nasty loudmouth,
> always a bossy, nasty loudmouth. :-)

I'll have to assume that also comes from personal experience. I don't
suppose that you've found any reason to change at this point.

> >Why the parakeet imitation if you didn't mean what you wrote?
>
> "Parakeet imitation?!?" Did someone tell you to eat the bird? :-)

Maybe you'd have understood if you hadn't snipped the relative portion
of your own post--you know, the one where you said something because
others had said it rather than because you meant it.

> >...and a fine champion you are, Len. You've managed to honk off

> was THE ONLY ham in Guinea-Bisseau) on a professional basis
> and he could never forget that! Poor feller, he got all uppity. :-)

Get it straight, Len. I was not a semi-pro. I was a professional in
communications in Guinea-Bissu, Sierra Leone, Botswana, Tanzania and
during two postings to Finland. I was a radio amateur on the ham bands.
As stated in at least two previous posts, I was the only ham in
Guinea-Bissau for *most* of my time there.

Don't sell yourself short, Len. You've managed to honk off lots of
folks who read your stuff here.

> Heh heh heh...go sit on a Rittysnitch and see if you "honk." :-)

I'll bet you said that to all the kids on the playground.

> >I do indeed find some joy, Len. You certainly help in keeping me

> at the Legion hall telling the Legionaires about it...

Why would I want to do that?

> BTW, you ARE eligible for AARP membership. :-)

BTW, I've been a member for three years. Boy, are they ever secretive
about their inner workings. I don't even get to vote for a director or
anything else.

I don't know that NRA members get to vote for a board of directors.
We certainly don't have the opportunity to vote for an AARP slate of
director candidates. The ARRL has a board of directors elected by the
members of their Division. We can vote 'em in. We can vote 'em out.

> >You might
> >have uncovered some things which may make life dangerous for you.

Ed,

While I somehow doubt that Len's answer is going to be
a resounding "Yes!" I feel compelled to point out that NCI
has NO problems with its members being ARRL members.
I am ... and many of the other NCI directors are as well.

In fact, I would encourage NCI members to join ARRL as
well, if they're not already members. First, ARRL does do
a lot of good things for amateur radio. Second, the more
NCI members we have contacting their ARRL directors
with their views and voting in ARRL elections, the more
we'll be able to influence ARRL policy on issues where we
may have historically had diverging views.

Larry,

That's a fundamental difference between you and me.

I congratulate a newcomer on passing his test and becoming
a ham ... welcoming him, even though we seem to have different
opinions on code testing.

You insult him because you view the test is "too easy."
(At least you didn't outright call him a "knuckle-dragger"
like you've done so many times before.)

Your PR skills for ham radio leave a lot to be desired.

Well, I suppose you must see things as Cecil, after all you're Mr. Twister's
understudy.
My statement applies fully just as well to anyone reading here.

> is of limited utility.

Wrong, the same equipment *was* being used, on each of the several stations. All were very weak, coming in from Europe on a nearly dead 20 meter band, and were the only signals noticed. I attempted to tune each station on PSK31, without being able to print any of them. Yet when each signed over I could clearly copy the CW ID. Note that I was experienced at working PSK31 and had done so for some time. Three was no question of my ability to properly tune in a PSK31 signal, which is certainly not a difficult assignment. For all 8 or 10 of those stations to wind up with the same situation, no copy of the PSK but easy copy of the CW, indicated something unusual was happening, probably polar phase shift.

That poll would well qualify as one that could easily be used to
"prove" which ever way the interpreting authority wanted to go. As indeed
it soon was, by *both* sides of the issue, still in the archives.

There's even precedent in the form of the ban on 10 meter-capable amplifiers To keep them put of the hands of the freebanders, FCC mandated a change effecting ham radio.

There you go again. Please produce a single post where I ever said that. You can't do it.
The value of CW has nothing to do with, and they have no idea of its value, that only comes from learning and using it. Without the incentive of the license few can be expected to do it.
And I say again, that says nothing whatever about its value.

It doesn't look like any sort of conversation will ever convince you that a working ham who
is
not a lid doesn't have as a first priority any such unrealistic technical comparisons, in
fact
they won't even be on his radar anywhere in sight. What he is interested in is real live
communications, NOW, not after your theorizing has (hopefully) come to something he can
actually get his hands on.

We are talking here about 12 b&w small print pages out of 12
x 171 pages per year. For the math challenged that is
{[12]/[12 x 171]} x 100 = 0.58%. In other words justifying
the cut based on publishing cost consideration is
ridiculous. IMHO the BoD is cunning, not ridiculous.

I realize QST is getting hard to believe, but it says in the
fine print on page 9 March QST " ARRL ... is an exempt
organization under Section 501(c) (3)...".

Care to explain that!

>have to get money any way they can. It's expand or die.

I've always wondered what would happen to NPR and PBS
if they decided to suddenly adopt a more conservative, or
at least a more moderate, political agenda. My guess is
that they'd suddenly be awash in loot! There are far more
middle-class conservatives with money to use for things
like contributions to NPR/PBS than there are rich liberals
and the terminally-impoverished clients of the Welfare
State created by the guilt of same.

>>And on TV we spend Saturday doing Men in Toolbelts
>>with Norm Abrams' incredible workshop that is increasing
>>looking like one giant infomercial.

All of which makes me think that the whole concept of
"public" broadcasting is an economic non-starter. I'm far
more likely to buy a new De Walt circular saw than I am
to ever send a check to my local PBS/NPR affiliate during
one of their endless "pledge breaks."

>It has to if it wants to stay on the air!

I say, if they want to stay on the air, they should get a clue
not only as to which side their bread is buttered, but to where
the money comes from that buys the butter!

That's funny. I've been an NRA member for years, and have read their journals cover-to-cover every month. Nowhere have I ever seen anything like such a "policy" of "gunning down the opposition," except through the legal means of political opposition. It seems to me that you have just accused a large group of law-abiding citizens of murderous anarchy. If this is not so, It would seem to me that an apology is in order.

I have and they resemble our old bus and truck plates (now they get the new one, too) although yours do remind me of one I saw some years ago from somewhere in the Empty West that actually said 'Prison Made' on them and looked like they had been made in a dim basement with a large hammer, a blunt instrument, and a bottle of cheap nail polish - the St. Louis Police were duly impressed as they were with our 1963 NE plate that in one of the country's greatest economy moves came out with a blank year for the sticker to be applied next year.

When you see one of our three shades of orange with black letters plates, a sun that looks like an orange or a very raw meatball, complete with the state's website on it you will know it, believe me. Even the artiste who won the design competition dislikes the rendition. NebraskaLand, where the East peters out.

As Val notes, Missouri is right up there for ugly. They managed to presage Y2K in 1970 by starting bright and shiny on 2 January issuing DLs that expired in 1963. The fix worked but the resulting licenses made everyone male.

Looks like DE has not yet caught up with selling your state as a brand. NE shows what can be done with enough idiocy applied to that process.

What you don't seem to comprehend is that you have been doing unrealistic technical comparisons. Power is only one of the terms. Bandwidth is there and throughput is there. If all three terms are not compensated for in some manner then they are indeed "unrealistic technical comparisons" and you are comparing apples and oranges just like 1000w SSB Vs one watt CW.

Isn't the goal to spend it or give it all away before you die? The
government will take the lion's share of anything left over when
you're gone (unless you are lucky enough to die in 2009, the one year
that GWB repealed the death tax) so your kids will need to figure
out how to make their own money anyway. Better to redistribute your
own wealth than to have the government do it for you.

>That would seem arguable BUT, it would not necessarily
>explain the internal differences by itself.

The people of California aren't tied or bound hand and foot to tradition and the ways that have always been so. We've gone on DOING things and attracted others who want to DO things, new things, advanced things, more and better things. Californians invented the Space Transportation System that some refer to as "shuttle." The bikini was born here. The personal computer got started here and is still being made despite IBM shutting down Boca Raton. There wouldn't be the plethora of semiconductors and integrated circuits for all of electronics without Silicon Valley or the various centers for semiconductors throughout this state. The first flying wing was born here and is still being built here as the B-2. Lockheed and Douglas and North American and Convair all showed the rest of the aviation world how to make airplanes, rivalled only by Boeing up in Washington state, another westerner. This state is the largest producer of cotton of any state in the union. The giant San Joaquin Valley is the breadbasket for the rest of the country. You want to know how to grow, ferment, and bottle wine for the relatively new Missouri wine industry? Come to the middle of California to see how it is done year around. There are no "bad" years, they are all good.

Want to communicate on the largest single repeater net begun without a single microprocessor? Sign into the Condor net and talk over a chain that takes a full days driving from one end to another. Want to see the variety of amateur radio stations and antennas used in the examples of stations sampled for RF exposure? Read about just Southern California stations in a government report. One out of 8 Americans live in California because we've DONE things, pushed the envelopes of performance of many technologies. While our public school system is lagging badly after using eastern methods of "new" education, this state has the highest number of Nobel Prize winners. Californians and California companies built most of the comm sats and the deep space probes with JPL as a "boss" with the Deep Space Network tracking them and receiving their data. DX truly "far out."

If your boundary conditions for your numbers mean defining the amateur classes by old standards and practices, go ahead and skew your data any way you want. This isn't a state stuck forever in the past, re-enacting some historical events in quaint costumes using ancient tools and technologies while dreaming dreams of glory and

accomplishment. We've gone ahead and pushed technology farther out, farther up, farther inward to miniaturization by experiementation, trying something on just an idea, then succeeding at it. Dreams of the future, not the past, looking ahead, not backwards.

>Sorry, can't do that! I'm interested in what's actually
>going on with those numbers!

Go ahead, make some morsemen's day, champion manual telegraphy all you want. Exhult in "pioneering HF radio" all the way to 2030 even though it was actually pioneered in 1930. Pardon us if we don't see the value in hanging on to something old, something borrowed, while you are so blue. Californians don't want to be bothered with advancing to the past. We've been there, didn't like it enough to stay, have gone on to the future and better things.

Skew the boundary conditions any which way you want.
What you'll have as a result is a skewed set good only for reinforcing your own personal desires. Hang onto that. It will make you feel very good.

Dick, have you or have you not said that potential hams will not learn Morse code unless they are required to do so by the FCC regulations? With that attitude supported by numerous postings from you, why would any newcomer think Morse code was worth learning?

Ed,
I posted a response to that several days ago. In short...once 5 wpm was
the permanent accepted level for techs that could operate on Novice
HF segments, then and from that day forward 5 wpm was accepted
as the minimu for HF.

Cheers,
Bill K2UNK

Here's the thing you said that the comment was referring to:

>>>Also, summing the "Top Three" licesnse classes,
>>>EX, AD, GEN, we get:
>>>
>>>For CA a total of 39,700.
>>>For NY, OH, PA & MO we have 48,500.
>>>For TX, FL, NM and AZ we have 47,800.
>>>
>>>Once again, a significant difference between
>>>CA and the other two groups.

About this I pointed out:

>>Not really. Here are the 2001 estimates for the
>>populations of those states:
>>
>>CA: 34,501,130
>>NY, OH, PA & MO: 48,301,776
>>TX, FL, NM & AZ: 44,858,010
>>
>>California has more hams per capita in all classes. It
>>just has somewhat more of the higher classes and a
>>lot more Techs.
>
>No, it has LESS of the higher classes, in absolute
>numbers, and VASTLY less per capita!

Boy, either math must work different where you live than where I live
or "per capita" must have a radically different meaning. Here's the
number of E/A/G and Tech hams per 1,000,000 of total population for the
entire country:

E/A/G T
USA: 1135 782

Here are comparable numbers for the particular states you seem interested
in:

CA: 1150 1202
NY, OH, PA & MO: 1004 631
TX, FL, NM & AZ: 1066 746

California has about the expected number of E/A/G hams, but has more Techs than the rest of the country on a per capita basis. The other groups of states are about 10% light in both categories compared to the country as a whole.

>Ask any statistician . . . it IS significant. That is, the
>factors behind those numbers are important to Ham
>Radio and it's future, most likely.

Just trying to help you get the factors straightened out.
Per capita, California has about the number of E/A/G hams you would expect from the national population, so that doesn't seem very significant. It has more Techs and more hams overall, so that may be significant. The other states you mention are short of hams in both groups, I don't know whether that is significant or not.

I don't think there's any statistician who would find the fact that in absolute terms California has only about 80% of the higher-class hams that either of those other groups of states have to be surprising or significant, since California has only 75% of the total population of either group.

>>Trying to correlate this with anything in particular seems
>>hopeless.
>
>To you, maybe, but the folks at ARRL likely care!

About too many Techs, like California has, or about too few hams, like those other states you mentioned have? I'll bet the latter bothers them more.

All you have to do is ask the individual director. He/she
will either answer with how they voted...to which you are
then free to agree or disagree and do whatever you like...or
the director can choose to not tell you, in which case I'd
be really ticked off and would not vote that person to
be reelected at the next election.

Is that the fellow voters that voted last election...or those
that might in the next election...or is it anyone who calls
the congress critter.

> And there IS a requirement that they represent us per our wishes.

PLEASE show us where that is spoecifically stated in the constitution
or any other law. Other than the elective process itself (and recall
where it may be an option) there is NO other means to hold anyone
accountable for how they vote. How many times have we heard the
explanation "I voted my conscience" when the known public opinion
would have "dictated" a vote the other way.

> >In the end, the next

>Morse hazing ritual. Good luck -- you're gonna need it

As you know, it won't be a matter of luck at all. Application
to the task at hand will get the job done. And I know from my
long-suffering Ham neighbor that 5 wpm is nowhere with
code and I'm going to have to about triple that . . . and that
I ** WILL ** triple that if I stay with it, which I intend to do.

I guess I've really been of two minds about this Technician test.
That is, it turned out to be fun, mostly because of the QRZ site.
I had read the "Now You're Talking" book thoroughly and had
gone over the questions there but, well, using that site really
put the icing on the cake. I took their sample tests several
dozen times.

So, in the end, some of the material I simply memorzed, like
the frequency limits and things like that. Some material I just
knew, such as electrical theory and components and whatnot.
Much of the rest I locked in on after the reading and from that
QRZ site, which is great.
.
Today, with the QRZ site able to put up sample tests of almost
any kind, I think the pools could be done away with, or
made larger, or whatever, thus making the tests "harder." If
if the student could take sample tests, even if they were only
approximate, it would give a lot of confidence, and success
would be assured for any serious-minded person, even with
the more difficult task.

Of course, not everyone has internet access, so . . .

Anyway, it may have been a relatively simple test but ace-ing
it was still a kick, without a doubt!

>hams, like those other states you mentioned have? I'll bet the
>latter bothers them more.

It's not "too many" Technicians, or "too few" higher-class
licensees, it's the difference, which I think is very large.
I wasn't making a moral judgement!

In any event, there's a research project here somewhere!

More later, now that I have a professional on my team!

It's probably not wise to admit that you're trying to do things that are bad practice if not overtly illegal. It makes it harder for the "old guard" to take you seriously, even if you have a valid point(s).

> It appears to me that the Greater Cincinnati area is "under siege" by

> could get in if they wanted to) be cut for the reason of wanting empty
> air. That to me sounds like non-effective use of frequency space.

What repeater was this on? How long were you talking? The rest of us might be listening. I don't know you personally...but I can say that I would tire of listening to even my closest amateur radio friends for a long period of time.

> Now that we are on frequency space let me just say that it seems a

> that space for a new repeater and haven forbid some new opinions and
> views.

Maybe. But I don't think you have any MORE or LESS right to the frequencies than they do. If the repeaters are as idle as you say, isn't there plenty of

bandwidth for you to spread your opinions and views. Of course, this is a two-way communications hobby, it's not about BROADCASTING your opinions and views.

I haven't heard you on the repeaters that I listen to, so I can't imagine that there isn't one for you to use and not be bothered.

> If you live in or near Cincinnati you may know who I am talking about.

> ham radio you have to subject your self to a group that I have heard,
> aptly referred to as the CRM (Cincinnati Repeater Mafia).

Plenty of other clubs have at least 2 repeater pairs of their own. I'm not a CRA member, never have been (ask my cohorts about this), but I'm guessing you had a bad experience on one of their machines because you haven't talked about any other club's repeaters?

Also...have you been to an ARPSC meeting? How about a QCEN meeting? (You haven't been to a QCEN meeting). Can you name some of the leadership from each group? You'll find very little in common.

Have you checked into a WARN net? No. Will you attend the annual WARN meeting/training? After this, you'd better!

> So you may ask, what can be done about such atrocities? Well I have

> KC8TAU
> kc8tau@fuse.net

Ok Phil:

I'm guessing that what happened is you jumped on a CRA repeater, at drive time, and monopolized the thing. I don't know about your operating practices, but good or not, no one wants to hear YOUR opinions and ideas for hours at a time.

You seem to be like many other UseNet posters. You have a lot of complaints, but you don't tell the whole story. And since you've NEVER been at meetings of the organizations in question, I expect that you will cease trashing them until you've met the people you seem to despise, and they've had a chance to meet you.

SkyWARN, ARES/RACES, and Red Cross are always looking for new hams. Ham radio is much more than ragchewing on or complaining about 2 meters.

But I get the impression that you're in the hobby because you think it will provide you a soapbox to share some kind of "opinions and ideas".

If so, you've probably joined the wrong hobby. Or you've been influenced by amateur radio operators who are misinformed.

I challenge you to explore ALL the repeaters and ALL the groups around Cincinnati, and report back honestly.

Otherwise, I won't take the time to invite you to join the real hobby, and won't offer my time to help in any way I can (which is what I'm trying to do here).

Probably true. Calling overseas today is just about as
easy as calling long distance (i.e. 1+10 digit dialing)
and the costs of a call have been driven down to
the point that an international call isn't all that more
expensive than domestic.

Cheers,
Bill K2UNK

Brian... I was looking at this idea from a marketing stance. If ya can hook 'em on a piece of bait, ya may keep them. True some may drop out after the first year but many more may stick around. After all, if they weren't getting any money from these people in the first place, it is actually a gain in some respects. Again for any others who like to read it differently, this idea was for FIRST TIME member applications who never held a ARRL membership only.

This idea has worked in other applications and was just curious if it would work with the ARRL if they pursued it...

>
>And you know that based on what evidence.
>More to the point, just how does any director instantly
>know the "majority" stance of the hams in the region he
>or she represents on any given issue?

By my experience, observation and interaction with others interested in the issue at hand. Discussions at club meetings, local newsletters, discussion on the air, etc.

It does not require the services of A.C. Nielsen to know what's going on or what my peer's opinions are, Bill, whether it is my interest in an ARRL/Amateur Radio matter, or local politics. Just a keen ear and a willingness to make myself informed on the issues.

>>One very popular US President tried that "silent majority" tack for
>taking
>> his own advice, and you see what it got him!
>
>What?

Feigned ignorance does not suit you, Bill.

>>Don't have recall? What public office cannot be recinded by popular
>or
>> Congressional vote?
>
>Many. Recall is NOT universal...it varies based on jurisdiction.

I asked for some sort of specific, Bill. Are you unable to produce even one? Not ONE single elected office that cannot be recalled by popular or Congressional vote?

If the President of the United States can be recalled or impeached, what lesser office could be impervious to the whims of the electorate?

Just one, Bill. Please.

>> >> And when ARRL elected officials don't conduct themselves according
>> >> to acceptable standards, THEY get recalled.

>> >Pretty rare event.
>>
>> Excuse me? Without going back through the last couple month'sQST's,
>an SM
>> was removed for just such reasons.
>
>I said rare! I didn't say NEVER!

But not by recent events, it's not. There have been several premature changes in ARRL field leadership in RECENT years that were precipitated by "cause", rather than by resignation for personal reasons or death of the office holder.

>So much for any efforts at recall then.

My point is that there wil be no such effort since the recent actions of the ARRL generally reflect the opinions and desires of the membership.

>There are REAL policy issues to get on with, yet they still are
>ignored by
>> those who figure someone else will do something about it.
>

>my
>> fellow voters in this district.
>
>Is that the fellow voters that voted last election...or those
>that might in the next election...or is it anyone who calls
>the congress critter.

Since balloting is secret and participation in the electorial process is solely at the discretion of the voter, it would be all citizens. But voting or NOT voting is irrelevent. The representitive is required to represent ALL citizens of thier district/state to the best of thier ability.

>> And there IS a requirement that they represent us per our wishes.
>
>PLEASE show us where that is spoecifically stated in the constitution
>or any other law.

That obscure part that says "We, The People". Is thre a specific line that says "You will do this or else"? Of course not. But neither is there a line in the Constitution that says "The Government is responsible for providing shelter, substinence and health care for otherwise able bodied people who refuse to work", but it does it anyway, now doesn't it, Bill?

>Other than the elective process itself (and recall
>where it may be an option) there is NO other means to hold anyone
>accountable for how they vote. How many times have we heard the
>explanation "I voted my conscience" when the known public opinion
>would have "dictated" a vote the other way.

And it should be the responsiblity of his/her constituents to "fire" them.
I agree it happens, Bill. I never said it doesn't. I said it isn't right.

>Even those that don't always vote public opinion get reelected.

One of the anomolies of a society that will elect and subsequently reelect

Then why don't you say that CW Morse has value and is worth learning even if one is not tested for it? When you say that it has value but that no one will learn it unless they are required to do so by the circumstance of the test you are sending a very confused message.

You choose the latter every time, and argue with me when I say the former. What conclusion do you expect people to draw from that, Dick?

So it would have been much more informative to say that CW provides better copy
than phase-shift keying when unusual propagation contains rapid phase shifts.

That would be a bit more informative to newcomers than "Shannon was wrong."

They don't, although they are all asking for member input on a regular basis. Tom Frenaye has told me that I am one of a handful of people who regularly give him their views.

We vote for people whose judgement we trust and I have the expectation of Tom that he will research issues and make the correct decision. He will certainly be in a better position to make the right decision about things I know nothing about. I regularly hear from ARRL Directors, asking me for technical information that will help them decide how to handle a particular issue.

This is a good example of an opportunity to vote early and vote often. :-)
While I don't think people should be pests about it, at each milestone in this process, people should reinforce their major viewpoints to their ARRL Division Directors. This may be especially true if they set a policy you agree with.

I am sure that the members of the Board heard from those who did not agree with its decision to not use ARRL resources to oppose dropping the code test as an international treaty requirement. I wonder if they heard from the same percentage of those who agreed with the decision.

I would not want to see the Board scramble at the last minute to make decisions about ARRL's policy position wrt the US rules. They want, and need, to hear from members on a regular basis.

I have an influence on the ARRL Board out of proportion to that of most hams -- not because I work in the ARRL Lab, but because I have developed a relationship with Tom that is as open and productive, as I can make it.

Hello, all!

W1RFI wrote, in connection with a comment that without
the licensing requirement CW, which has great intrinsic
value, will likely fall into disuse:

>Then why don't you say that CW Morse has value and is worth
>learning even if one is not tested for it? When you say that it
>has value but that no one will learn it unless they are required
>to do so by the circumstance of the test you are sending a very
>confused message.

I think that the concern revolves around the band plans and
what will happen when a relatively small number of amateurs
use CW in an environment where the changing of standards
is swelling the ranks of Hams in general, no pun intended,
and airspace is getting more and more crowded with every
passing year. That is, what else can the ultimate goal of the
testing changes be other than, in the end, more hams, and
by extension, more hams who know nothing about CW? This
seems pre-ordained to me.

Sure, the mode is "valuable" and sure it will remain "in use"
for that reason. But once it loses its official support, and
once it falls to a fringe within the fringe that is amateur radio,
how long before the band plans change and it becomes
a fugitive on the waves, which will start the ultimate slide?
Hasn't all of this been in the works for about 30 years now?

That is, from my reading and talking to other hams, it seems
that very few of the "all-in-one" rigs that have ever been made
can do a truly top-notch job with CW. That is, for today's big
commercial makers it's NEVER been a priority. And what do
I see this month in big, glossy ads in QST? A lot of all-in-one
rigs, as the flagships. So, it's a bit, er, ah, of a dodge to say
that CW will just get along once testing goes away. Where is
any commercial support for it, hm? I don't see much, other
than QRP . . . which by its very nature is small potatoes
expense-wise, at least in comparison with towers, beams
and amps. There isn't likely to ever be big money in little
tiny amps and antennas, I don't think.

It seems to me that there's an avalanche, a slow-motion one,
headed down the mountain, and in my view, CW is at the
bottom of the hill ready to be buried. And I don't think anything
is going to stop it.

Am I wrong?

But CW can be used on virtually every ham frequency and gets
through when the other modes don't. So there is nothing to
worry about. I don't foresee the day when CW will be outlawed
or even prohibited from the voice bands.

> It seems to me that there's an avalanche, a slow-motion one,
> headed down the mountain, and in my view, CW is at the

> is going to stop it.

If you're right, then nothing can stop it. Someday, you are going
to die. I assume you don't like that either. My Daddy told me to
just accept the things that I cannot change. If CW doesn't have
enough merit to survive in a free market of modes, then it doesn't
deserve to survive.

> Am I wrong?

Why is CW at the bottom of the hill ready to be buried? CW is alive
and well. I often work CW right through foreign broadcasts on 40m.
CW can be used virtually anywhere on all ham bands. I don't know of
any other mode about which that can be said. What more could you
ask for?

Hello, all!

This message is inspired by another one buried deep
in another thread. But the exchange was of sufficient
interest that I thought it might be placed here in a
new thread. That is, I am looking for some serious
illumination, emotion aside. There seem to be some
leaders in this group, and leaders look ahead while
planning for the likely future, they do NOT equivocate
and mince words. What is going to happen with CW?

[I haven't seen N2EY's fourth installment on the
history of amateur radio. Has it appeared? Also,
in a thread that contained some valuable information
from N2EY, elsewhere on this board, I implied that
another poster's output was "important" while his
was, by extension, not important. I want to apologize
for that.]

Here is the original message:

--

W1RFI wrote, in connection with a comment that without
the licensing requirement CW, which has great intrinsic

Val

-- End original message --

Now, I'm sure I've made some errors, perhaps of fact, perhaps
of interpretation. But, the main elements are:

** How can the end of code testing NOT lead, eventually,
to a dramatic decline in the use of the mode, especially in
relative terms. Won't this happen because the combination
of the already extant relative decline in CW use, coupled
with the undoubted relative increase in the numbers of
un-coded hams, will lead, as sure as night follows day,
to ever-increasing pressure on CW in the band plans? For
instance, what will NCI do when the code test goes way?
I think I can guess, can't you? And who will resist this
pressure, with any effectiveness? I don't see anyone.

** Sooner or later, won't CW be severely cut back, or
even removed, in the band plans, especially since there
is very likely to be organized pressure to do exactly that?

** Finally, and at the last ditch, isn't it true that CW is
hardly a cash-cow for the big commercial makers?
That is, isn't it VERY unlikely that their economic interests
would ever lie in promoting the voluntary use of code on the
bands? I think this statement is likely true. And won't that
lack of economic interest create a subtle, or even non-subtle,
atmosphere at QST to, er, ah, not rock any mode boats?

Human nature is human nature, after all, and their advertising budget is already under pressure, or so it says in the March issue. The gun looks loaded to me, regardless of what anyone on the staff actually thinks or believes!

Once again, how far off am I, regardless of the goodness or badness or the whateverness of the outcome, in your individual opinion? That is, what IS gonna happen, do you think, to CW and to the band plans? And WHY is that going to happen?

Now, I guess it's anyone's Constitutional right to say something like "The future is hard to predict, yadda, yadda. . ." but that would hardly be either interesting or helpful. How about some intellectual activity!

Probably the same thing that happened to bows and arrows, antique cars, stick shifts, horseback riding, walking, etc. In my home town of 4000 people, there is a bow and arrow store.

The question is: Will there be any mode or modes that can perform the function of CW so much better than CW that CW will be discarded in favor of the new mode(s) (like the slide rule was discarded in favor of calculators). Since part of the function of CW is having fun, I suspect not. AND coherent CW is hard to beat by any other mode. Take a look at the on-line QST articles about coherent CW. The tone that one copies is a pure sine wave without any noise AND it has almost a 20dB advantage over normal CW.

Well, I'm not sure of that at all. However, a certain amount of uncomfortableness with the "new standard" is inevitable, in my view. We're all only human and therefore have weaknesses. In amateur astronomy, we now have totally "GoTo" telescopes, instruments that can find anything in the sky at the touch of a few buttons. All you need is the money to afford them and you can do things that astro Old Timers still can't dream of doing. This has inevitably caused some resentment, in the same way that the "RUBIE" phenomenon has P-O'd some Old Timers among bikers. I guess I'm old enough to simply expect a certain amount of that.

>Probably the same thing that happened to bows and arrows,
>antique cars, stick shifts, horseback riding, walking, etc.
>In my home town of 4000 people, there is a bow and arrow
>store.

I'm reading . . . though, of course, one of the reasons the
bow and arrow got replaced was because of its short
range. CW, even low-power CW, doesn't have that problem.

>The question is: Will there be any mode or modes that can
>perform the function of CW so much better than CW that CW
>will be discarded in favor of the new mode(s) (like the
>slide rule was discarded in favor of calculators). Since
>part of the function of CW is having fun, I suspect not.

That's fine, but the questions are deeper than this. That
is, the function of repeaters has been taken over by the Big
Guys and now everyone has a cell phone, and repeaters
and what-not are strictly in the shade. Combine cell
phones with the internet and, well, who needs ANY of this
Ham stuff at all, if it's "function" you're concerned about?
Isn't the whole avocation sort of lost in the backdraft, if
it's only some vague notion of "function" that you're con-
cerned about? That is, isn't Ham Radio MORE than that?

>AND coherent CW is hard to beat by any other mode. Take a
>look at the on-line QST articles about coherent CW. The
>tone that one copies is a pure sine wave without any
>noise AND it has almost a 20dB advantage over normal CW.

But it's still, you know, like a bow and arrow with better paint,
isn't it? Who cares?

And what about the public policy angle, that is, the band plans.
And what about the future of NCI with regard to said plans?
Surely you have some ideas there, or do your "libertarian"
ideals prevent you from even THINKING about those coercive
"rules and regs," or even custom and convenience!

Yes, but two of the three items seem er, ah, less than encouraging
for CW, don't they? I've been involved in some pretty complicated
preference testing surveys and, well, questions like that one would
have been "right-out" for us! But we were really and truly and
vitally interested to sift out the real situation and then to have that
result stand up to peer review!

No, I don't think that's true. Rather, I think you are
separating the two, which is bizarre considering the
actual Ham Radio situation.

I hope by the summer to be fairly proficient at code,
and to pass the General exams in April. I've already
passed the Technician test.

Val

P.S. Ask yourself why some millionaire engineer would
want to talk on a repeater . . . when he's got a cell phone?

Light come on for you yet?

Steve,

I appreciate your comments and time. Very well put and I am not saying that all of the aforementioned groups are bad. In fact some of the work that is done by them is in the best of intentions. I do think, however, that you would have been wiser not to assume to know what my experiences out of life have been.

Broadcasting is not what I would like to do and I to not tend to get up on a soapbox about things (this time the thorn had dug too deep). In fact the conversation that I was talking about was less than a minuet long. The removal was an almost immediate response to someone talking on the repeater, and that is the reason that most of the repeater space is tied up and there is little place to talk. BTW I have looked around the spectrum and found a few good repeaters to talk on one in northern Kentucky and Indiana and one or two out in "fringe" counties of Southwestern Ohio.

Now as for WARN that you seem to think so highly ofi¿½I was listening to the last weather related WARN net during a heavy wind and rain storm that passed through a couple of weeks ago and do you know what I heard. I heard some guy talking about his trees and a garbage can in his back yard for about an hour. So let me see a rag chew about a tree during a weather net is acceptable but me saying hi to one of my friends on a quiet repeater on a sunny day in the after noon is scolded, that really gives me a lot of faith in this great hobby.

Steve, I know if your position with WARN, and I appreciate the work you do. You are right I have not been to any of the meetings or tanning, but I know, first hand, of people who have been very active and donated time equipment and money to your you cause and in return have faced ego and a poor attitude toward the work that was done. That is my reason for not jumping on the bandwagon and joining right up.

I am sorry for coming off very harsh in my first post, but I do like the hobby and I want to see it flourish. I do not want you to think me just a hateful individual, and I do understand that most hams are very nice and considerate people. I have traveled a bit and had some great experiences with hams in other areas. It just seams to me that this area, like with many other things, is just stuck in it's ways and refuses to accept change. And just possibly I have some miss information from other people that I have talked to about this so please tell me all the sides of the story I would love to hear them, and I promise I will listen to anyone with an intelligent point.

Now onto the "illegal" comment I made in my last post. I spoke to a
very nice gentleman at the FCC and he told me that it was all right to
have a "commercial" radio that would do amateur band just not the
other way around. So if I miss stated my self I am sorry for that too.

"73" to all

Not if you have faith that, "Once Morsed, Always Morsed!" :-) If only
10% of all hams use CW regularly, that is 70,000 regular CW users.
I believe that 10% of all new hams will choose to learn Morse code
and use CW after the requirement is dropped - maybe more.

As a Libertarian, I have no choice except to vote for
freedom from unnecessary governmental requirements. Seems
even the FCC considers it unnecessary.

Why should CW be singled out and tested as a skill? Especially
since it is never re-tested. Especially since a CW capable
ham station is not required. Why should Morse code skill, for
testing purposes, be considered as important as everything else
in ham radio combined?

> P.S. Ask yourself why some millionaire engineer would
> want to talk on a repeater . . . when he's got a cell phone?

In the Phoenix area, it was because he wanted to be able to
use mountain top repeaters to talk to a group of camping
buddies. Additionally, to the best of my knowledge, none of the
millionaires in my group of camping buddies owned a cellphone.

> Light come on for you yet?

Mine's been on for 51 years. How about yours?

The longbow had enough range to win a considerable number of battles. And there were some crossbows so massive that they had to have wheels. Technology, i.e. chemistry, replaced the bow and arrow for purposes of war. For purposes of sport and fun, the bow and arrow has NOT been replaced. The State of Texas has a bow and arrow deer season before the regular deer season gets underway.

If the alleged supporters of CW would realize that CW is fun, they might convince some newcomers to learn it and use it. As long as those alleged supporters keep telling newcomers that they won't learn Morse code unless they are forced to do so by a governmental requirement, most newcomers will be turned off and find the mode unattractive.

With friends like that, CW doesn't need any enemies and is probably doomed. When those alleged supporters of CW start pushing the fun and merits of the mode instead of the forced learning, I will feel much better about its survival.

> Isn't the whole avocation sort of lost in the backdraft, if
> it's only some vague notion of "function" that you're con-
> cerned about? That is, isn't Ham Radio MORE than that?

Nope, ham radio is no more than its function. IMO, its primary function is emergency communications. Its secondary function is fun. Ham radio is going to die unless we convince the newcomers that we are having fun. "Nose-to-the-grindstone" approaches don't work. "Force someone to learn Morse code and they will love CW", is 19th century thinking akin to a rapist saying, "Relax and enjoy it." The world just doesn't work that way anymore.

> But it's (CCW) still, you know, like a bow and arrow with better paint,
> isn't it? Who cares?

Research and development is still ongoing in the field of bows and arrows. It is a dynamic and living sport. You seem to feel that CW is dying - it is not. There is no governmental requirement to keep bows and arrows alive. Why does it thrive without a governmental requirement?

> And what about the public policy angle, that is, the band plans.

As a Libertarian, if I were the FCC I would say, "Here's your
band edges and here's your power limits - have fun." If all
modes were allowed on all ham frequencies, the best ones would
win. I believe CW would be among that group of survivors.

> tiny amps and antennas, I don't think.

I don't know who you've been talking to about "all-in-one" rigs,
Val, but every HF transceiver I've had a look at has been soooo
much better at CW operation than any of the 'legacy' rigs from
the 'golden age' of amateur radio. My own rigs are a pair of
Kenwood TS-850's. While not 'modern' (ie: loaded with DSP), it
is instructive to note the CW-only features incorporated into them:

(1) Built-in Keyer (with 3 memories)
(2) Provisions for 500 Hz and 250 Hz Crystal Filters
(easily installed and relatively cheap)
(3) Full Break-in
(4) Adjustable BFO tone (pitch) in CW mode.
(5) Selectable BFO placement (above or below rec'd signal)
(6) Transmit sidetone in CW mode.

Additionally, there are features that, while not exclusively
incorporated for CW operation, make it much more enjoyable:

(7) 1 kHz/rev "fine" tuning
(8) Manual IF notch
(9) IF passband tuning
(10) "chirpless" transmit VFO
(11) RIT/XIT
(12) IF Noise Blanker
(13) Two independent VFO's + memory channels
(14) Accurate frequency readout to 10 Hz
(15) Fully adjustable power output from <5 w to 100 w

I go back to the era of Hallyscratchers and DX-100's and
I'm here to tell you that CW operation with any of the
current HF transceivers is an absolute dream compared to

those old clunkers.

It is also my take that as we transition to Software Defined Radios in the 21st century that it will be increasingly easy to incorporate top-notch CW features with no impact on unit cost. Case in point: I had to spend extra money to get narrow IF crystal filters for my TS-850's. Now those narrow filters are just subroutines in the IF DSP's of current rigs like the Icom IC-756pro.

Source record: 38069

CAM wrote, concerning the code and code testing:

>As a Libertarian, I have no choice except to vote for
>freedom from unnecessary governmental requirements.
>Seems even the FCC considers it unnecessary.

It's obvious that the FCC does not CARE one way or
another. It's WE who care. Now, what I want to know,
REALLY, is what your deal IS! Are you truly basing
your position vis-a-vis code on "Libertarianism" and
not on what's best, in the long run, for amateur radio?
It sure seems that way since I find your position extreme,
considering the other things you have said relative to
code itself. But then, you know, I have read in the papers
about people who are "pro life" -- but who shoot doctors
in the head. So, I guess I shouldn't be surprised that
you seem willing to execute the thing you use the most!
Of course, you won't be around, most likely, when the
hammer finally falls, will you? Apre mois, le deluge?

>[Why should] CW be singled out and tested as a skill?

Lots of reasons, especially to get on HF, especially as,
say, an Extra.

>Especially since it is never re-tested.

Have you ever advocated re-testing?

>Especially since a CW capable ham station is
>not required.

Have you ever advocated that? Oh, I forgot, you're against
these kinds of things. Er, my head hurts since your glaring
inconsistencies are so, ah, glaring.

>Why should Morse code skill, for testing purposes, be
>considered as important as everything else in ham
>radio combined?

It is? I don't think that's true at all. I will be getting a
Technician license soon (since I have passed the test)
that will allow me to do all kinds of things, all kinds of
high-tech things, and no code required at all. There's
a whole WORLD of radio I will be able to do in a few
days, and no code required at all. What in heaven's
name are you talking about?

[Concerning millionaire engineers with Technician
licenses using low-tech repeaters]

>In the Phoenix area, it was because he wanted to be
>able to use mountain top repeaters to talk to a group
>of camping buddies. Additionally, to the best of my
>knowledge, none of the millionaires in my group of
>camping buddies owned a >cellphone.

OK, now I know you're just making stuff up, like the engineer
who tried low-power CW and found it "unreliable." Quit doing
this; it doesn't look good . . . and it completely trivializes
Ham Radio. Wow!

>Mine's been on for 51 years.

No, it hasn't, not the one I was talking about!

>How about yours?

I was BORN with it on, apparently, which makes it hard
for us to communicate!

Val

Same song, second verse. Nolo contendre, on your
side of the argument.

[Concerning Ham Radio in a more general way.]

>Nope, ham radio is no more than its function. IMO, its primary
>function is emergency communications.

Ooops! Aahoooga! Aahoooga! Check the question
pool I just took!

>Its secondary function is fun.

Well, this is just WRONG! Man, no wonder we have problems!
Here we see the gaping black hole at the very center of all
Libertarian "thought" -- it's all about ME and the FUN that might
be had by each individual, like ME. That there might be a
meta-purpose to "rules and regulations" beyond the miniature
thought processes and desires of "Libertarians" -- just NEVER
occurs to them. Nope, they got it all locked up.

>Ham radio is going to die unless we convince the newcomers
>that we are having fun. "Nose-to-the-grindstone" approaches
>don't work. "Force someone to learn Morse code and they will
>love CW", is 19th century thinking akin to a rapist saying, "Relax
>and enjoy it." The world just doesn't work that way anymore.

Well, the world of Ham Radio NEVER worked the way YOU
just described it! And now I don't feel so bad about the "pro-life"
example with the doctor being shot!

[About CW's future]

>You seem to feel that CW is dying - it is not. There is no
>governmental requirement to keep bows and arrows alive.
>Why does it thrive without a governmental requirement?

I guess there's just no point, is there? Good God.

>> And what about the public policy angle, that is, the band
>plans.

>As a Libertarian, if I were the FCC I would say, "Here's your
>band edges and here's your power limits - have fun." If all
>modes were allowed on all ham frequencies, the best ones

>the first year?

The membership fee as it is seems to be a good price for a
subscription to QST. QST may be a propaganda organ for the
ARRL but it does offer information for radio amateurs.

For a better rounding-out of information, particularly technical
information on radio and electronics, a radio hobbyist MUST
have at least one more periodical subscription, preferrably an
independent periodical.

It's not a terribly bad thing to become totally dependent on the
ARRL for ALL information on amateur radio...just as its not a
terribly bad thing to wear blinders all the time. Many prefer
that condition in life, to have others make the "big" decisions
for them. They have an organization to belong to, a "tribe" or
"clan" of sorts, fulfilling a primal need of belonging to
something. Where it starts to go "bad" is changing a hobby to
a Lifestyle and adopting a singular organization as a temple
to worship, assuming a strong emotional kinship. Where it
definitely goes bad is to the fundamentalist-like viewpoint of
the True Believer where emotionalism overrides everything,
excluding everything but The True Way.

Right now I see the ARRL in the beginnings of a "change-
over" period in their organization. They seem to be up to the
inescapable brick wall of economic reality. While they are
technically a "non-profit organization," it is obvious that they

must make a profit on books, other periodicals and resale items to continue providing services. QST, rated solely as a magazine, can continue its monetary independence on advertising alone but is feeling the pinch of fewer ad sales. They must cut back or siphon off monies from the general ARRL budget. The latter does not seem an option.

ARRL executives en masse are faced with a deep division of opinion among radio hobbyists regarding old standards and practices versus the new. The "core" ARRL membership adheres to the old standards and practices and that will unlikely not change until life attrition takes its toll. The ARRL has not only reinforced the old beliefs but, through its "voluntary" executives being a part of those old beliefs, has mandated "this is the way it must be" in amateur radio and expected "all" to follow their "guidance." That has not happened. The ARRL has been in denial for some time and the rationalizations have been many and varied...but are not enough to increase membership.

ARRL executives are just going to have to bite their collective bullets and realize that succeeding generations aren't buying into their belief system rooted in old standards and practices. A few have. Some remain steadfast and will likely remain so until their last switch is shut off.

As an independent observer, I'd say that the ARRL would have to give out FREE trial subscriptions to QST to begin making any sort of membership increase. That's economically inviable. The only other way is about as difficult: Start changing their attitude towards the hobby with its "Big Brother" approach. The ARRL competed for leadership of a group of hobbyists and got it from older generations but most of those are gone now. There are new generations who don't buy into old standards and practices. Leadership is not demonstrated by an insular mindset of "we know what is best for ham radio." Assumption of authority is not the same as actually being authority.

How many are CAUSED by guns?

When gunnery and NRA membership has something to do with
amateur radio policy or even about any radio, we can talk about
it. I don't see that NRA, AARP, or even the DAR having anything
to do with the subject.

The ARRL is definitely within the loop concerning amateur radio
policy.

>
>That's fine, but the questions are deeper than this.

Not really. Technically, OOK CW has not proven to be useful
as a communications mode. If it had actually been so, it
would have been retained by many, many other radio services
engaged in communications.

That last radio service holdout for morse modes as a license
requirement is amateur radio. It is a hobby mode. It isn't
vital or necessary to demonstrate radio competence to obtain
a federal amateur radio license.

>That
>is, the function of repeaters has been taken over by the Big
>Guys and now everyone has a cell phone, and repeaters
>and what-not are strictly in the shade.

Only one in four Americans are cell phone subscribers,
not "everyone.".

>Combine cell
>phones with the internet and, well, who needs ANY of this
>Ham stuff at all, if it's "function" you're concerned about?

One needs to embrace the totality of old standards and
practices to "demonstrate commitment and dedication" to

some members of the ARS. :-)

Never mind that a recent poll has half of all US households
having some form of Internet access at the end of 2001.

>Isn't the whole avocation sort of lost in the backdraft, if
>it's only some vague notion of "function" that you're con-
>cerned about? That is, isn't Ham Radio MORE than that?

To some (particularly the True Believers) it is SOLELY
"working DX on HF with CW." :-)

>>AND coherent CW is hard to beat by any other mode. Take a
>>look at the on-line QST articles about coherent CW. The
>>tone that one copies is a pure sine wave without any
>>noise AND it has almost a 20dB advantage over normal CW.
>
>But it's still, you know, like a bow and arrow with better paint,
>isn't it? Who cares?

To keep with the archery analogue, coherent CW over
conventional CW is more like a compound bow versus an
ordinary straight bow. More power, easier handling, truer
launch.

>And what about the public policy angle, that is, the band plans.
>And what about the future of NCI with regard to said plans?

The publicly stated policy of NCI is to cease existance when
the morse code test is removed from amateur radio license
requirements.

>Surely you have some ideas there, or do your "libertarian"
>ideals prevent you from even THINKING about those coercive
>"rules and regs," or even custom and convenience!

Many have thought about morse code modes. Opinions
vary widely. Tell us why a certain way of THINKING is the
"only way to think?"

>
>So it would have been much more informative to say that CW provides better copy
>than phase-shift keying when unusual propagation contains rapid phase shifts.
>
>That would be a bit more informative to newcomers than "Shannon was wrong."

Various combinations of phase and amplitude modulation have been used on HF successfully by other radio services for a decade. See Fed Std 4075 for modes used with ALE.

Why is it "informative" to say that "CW provides better copy than phase-shift keying when unusual propagation..." without giving any quantitative information?

FSK has been used on HF for about seven decades now in spreads from 850 to 170 Hz, with and without error-correction codes, throughput from 60 to over 100 WPM. It would seem that the "phase shift problem" on HF is another myth promulgated by the PCTAs.

The major problem on HF over the long paths is still selective fading. That can
cause a drop-out of EVERY mode at low signal levels.

2083. Conditions, Covenants and Cue-Ess-Tee!

Source record: 38078

Hello, all!

Let me preface my remarks by saying that I am getting ready to put up some antennas on my property, and a 45-foot tower is under consideration. That is, I am allowed that here. BUT, I'm not going to do that until I check with the six neighbors nearest to me and see how they feel about it. That is, 45-feet is UP THERE in this area and would be something my neighbors would have to look at A LOT. And my kid plays with some of their kids so, well, I'm not going to do a thing to cause a rift.

Anyway, I hold in my hand, or was until just now, the March issue of QST. In it are no less than three pages concerning the problems hams are having with restrictive covenants in many housing developments. To me, the most interesting part of this whole display is to be found on page 90, where, following a discussion of "reasonable accommodation of amateur communications," we read the following:

"So I can erect a 44-foot tower in Saratoga Springs, New York. Big deal. I need an array that's going to bust through the pileups for P5 so I can get that last country on the list. Forty-four feet won't cut it."

Whoooaah, there, podner! The discussion in QST had been framed around what was happening when hams moved into "nice homes" in good developments. There really wasn't much, or actually, ANYTHING in those pieces about THE NEIGHBORS and how to approach them. No, it was all about how to get the government, namely, the CONGRESS of the UNITED STATES, currently at war and still cleaning the anthrax out of the mail hoppers, to make it possible for hams to do what they want, no matter WHAT the neighbors want, even if the ham was putting up . . . well, see below.

That is, QST had a discussion of a ham who put up, on a six-acre lot, no less than three, 100-foot towers, which led to a suit against the city, for issuing the permit, which led to an order calling for the dismantling of the towers! The case is still in litigation and the ham in question is going to have to convince someone, somewhere, that those towers are necessary for a "reasonable accommodation of

amateur communications." One hopes the opposition will not quote QST, above, about that pileup, and about how a maximum-establishment antenna system is "reasonable." I also hope his neighbors are not Libertarians, at least not Libertarians with a finely-honed sense of their property values and how they are being individually affected by those towers in terms of their property's resale value.

Is it really true that "reliable international communi-cations" require all that hardware? Well, no, it does not, if you're using CW. No, something tells me that this kind of an outfit is required for phone, since my near neighbor can work the world on a low-impact antenna and 100 watts, CW. Of course, maybe he doesn't need ONE CARD bad enough to risk the ire of his friends nearby. I don't know. But, SURELY, there is a better test case than * 3 *, ONE-HUNDRED-FOOT towers? Surely!

I have a relative living in a development with lot-sizes comparable to those above, and house prices up in the quarter- to half-million dollar range. None of those folks moved to that area to live next to a radio station or other artifact that looks industrial. I don't think Ham Radio, which QST seems to be re-positioning as a "Civic Organization," is going to get very far, in the end, bucking the high rollers about covenants. That's a battle that makes CW look small-time, indeed.

Finally, in these days of sprawling cities and high home prices, CW, the efficient, low-impact mode, seems to be more and more indicated by the times, perhaps? Will more-and-more forever, in the way of big rigs and P-O'd neighbors, get Ham Radio where it wants to go? I wonder.

It can be a problem in PSK systems without FEC. Such systems, IMO,
are not serious systems. RTTY has lots of problems known for decades.
PSK31 shares many of those same problems. Just because something is
relatively new doesn't mean it has solved all the problems known to
man. PACTOR II is a serious mode. I can raise a PACTOR II mailbox
in Germany when I can't even hear the signal.

Not at all, Val. I bet that at no time in its history, have the majority of amateur communications with other amateur stations overseas been conversations that would have taken place on the telephone without ham radio. Now, as then, hams are interested in communicating with systems they have assembled or built themselves.

>What's left, if it's "mode function" we're all worried
>about? I don't know.

Hams are also very much interested in their operating mode. The medium IS the message, in many cases.

Many, many fewer than are prevented by guns. It is just not politically
correct to report the rational use of guns to save lives during an act
of self-defense.

Here's a typical event from the People's Republic of Massachusetts:

"Three Men, armed with guns and knives, rushed the cash register at
a Boston-area liquor store just before closing one night. During the
melee, one clerk's hand was cut, and another was shot in the arm. Then
in a moment's distraction, a third clerk armed with a handgun turned
the tide, shooting all three suspects and sending them fleeing. Two
of the suspects were picked up on the street, amidst a pool of blood
and cash. The third man was found in a hallway of a nearby building
with a gunshot wound to his arm." Boston Globe, 12/29/01

>It's not a terribly bad thing to become totally dependent on the
>ARRL for ALL information on amateur radio..

It would be a very bad thing to be dependent on ARRL for all information on Amateur Radio! There is a lot more good information being developed within Amateur Radio than can be developed by a handful of people in Newington, CT. There is a lot more expertise in ham radio than can be found in Newington, CT.

In most cases, the best role ARRL can play is to utilize its resources to help direct people to where they can find such information. That very much is the tact taken on the ARRL Tech Info pages. Virtually every page contains both ARRL information and links to other sites that have even more information, and often better information, on the subject.

Nope, I agree with the FCC. If you disagree with the FCC, take
it up with them.

> Well, this is just WRONG! Man, no wonder we have problems!
> Here we see the gaping black hole at the very center of all
> Libertarian "thought" -- it's all about ME and the FUN that might
> be had by each individual, like ME.

If you are not going to have fun being a ham, why would you choose
to become a ham? You are not going to be able to convince anyone that
you are entering ham radio so you can sacrifice your self interests
on the alter of altruism. If ham radio gave you more pain than pleasure,
you would never enter it.

> Well, the world of Ham Radio NEVER worked the way YOU
> just described it!

You should know? How long have you been licensed again? The Morse
code exams have been used as a hazing ritual for about 25 years.
Thank goodness, those 19th century approaches are being given up
as we enter the 21st century.

>How many are CAUSED by guns?

Unless there is a mechanical failure of the weapon, none.

Deaths by firearms are "caused" by the improper or criminal use of them.
The weapons themselves, with the exception of mechanical failure, cannot
themselves "cause" a death anymore than a car can cause a death.

W1RFI wrote, about the FCC and code, after I indicated
that the FCC didn't really care about the code problem:

>It was the FCC that initiated the rulemaking that ultimately
>led to the restructuring of Amateur Radio. If they didn't care,
>the easiest path was to leave well enough alone. They could
>have dealt with the waiver problem with a lot less work.

Well, yes. And it would be most interesting to be privy to
exact sequence that led to that FCC "initiation." Let me
rephrase: They don't seem to care as much as they used
to, one way or another, and code to them surely is something
they respond to with refererence to the Ham Community itself,
and not because of any overriding government interest.
In addition, they seem to want out of as much as they can
get out of, including enforcement, apparently. Of course,
I could be wrong in this. It simply seems this way, to me.

[Also, with reference to testing exclusively for code, which
I indicated had an unspecified respectable purpose, par-
ticularly at the Extra level, W1RFI wrote:

>The code test speed to obtain an Extra is the same as
>that required to obtain a Tech plus.

Yes, and THIS is something that really is a bit strange.
OK, so code is a problem for some, so the new Technician
class is installed. And, hey, I can't really gripe. And perhaps
any level of code is sufficient for a General license. But
surely a case can be made for reserving a small slice of
ancient custom for the Extra, the ne plus ultra of Hamdom?

Surely that is not unreasonable?

Well, maybe not. But I know about neighbors and how they react when somebody starts doing strange things in high-end subdivisions! And I've been hanging around my near neighbor for several years, off and on, and watching and listening while he commuicates with folks all over the place, with equipment that can hardly be seen from the road. I don't know, I just thought it was relevant. But then, for you, maybe you'd just rather lash out . . . since my argument makes a little sense. But that couldn't be true, could it?

Val, the marketing efforts at HQ really stunk and the survey system
provided a complementary odor.

I was, however, somewhat impressed that an online app could be referenced
to a mailing and cause the system first to check that it was valid and
second to deliver the promised goodie. So somewhere at great expense no
doubt the ARRL is entering the 1970s and charging mightily into the 80s
which is more than likely the consultant learning to deal with a
cantankerous bunch like us and not having had to deal with techies since
surviving Toaster and Litebulb 106 at B-school.

That is true of those Washington types in the agnecy who are not the folks who actually have to DO the enforcement. That pizzing contest has been going on for at least twenty years. See my earlier comments about the necessity of splitting the agency in two.

Of course, the content of most ham messages is irrelevant -
the medium IS the message.

The purpose of the federal government is NOT to preserve
ancient customs. That is entirely up to groups of
individual citizens.

Not if you are who you say you are. No newcomer would attempt
to tie towers and Morse code together. That's even a logical
stretch for experienced hams like Dick.

This reminds me of when they launched that amateur satellite that school students were supposed to listen for. It was going to broadcast a signal that you could pick up when the satellite passed overhead. I set my handi-talkie for the frequency, and promptly forgot about it. I went to bed, and sometime in the middle of the night all hell breaks loose, scares the bejabbers out of my wife, and I got yet *another* admonition to turn that thing off when I'm done for the night. But we heard it!

The journey is the fun part, and it sounds like your having fun
already. What kind of antenna are you building for the satellites? I
never thought about tracking with GOTO, but it's interesting.

That is why your equipment has the ability to change frequencies
or turn it off. If you are bored with the conversation then do one
or the other.
No one should have to limit their conversation just to please you.

All of that will tune you in to those that are vocal and involved...to wit,
the
small percentage of movers and shakers...not necessarily any true
majority. Nothing wrong with that, but it sure ain't "representative".

> >>One very popular US President tried that "silent majority" tack for

I already said there are some. Which ones, who cares?

> If the President of the United States can be recalled or impeached,
what
> lesser office could be impervious to the whims of the electorate?

The president can't be "recalled". Impeached - Yes, recalled No.
There is a difference.

> Just one, Bill. Please.

I already said there are some. Which ones, who cares?

>
> And it should be the responsiblity of his/her constituents to "fire"
them.
> I agree it happens, Bill. I never said it doesn't. I said it isn't
right.

It has come to pass that such votes have ultimately
been the correct way to go. Not always, but sometimes. The point is that
elected reps DON'T always follow the vox popular.

> >Even those that don't always vote public opinion get reelected.
>
> One of the anomolies of a society that will elect and subsequently
reelect

Perhaps you should read the NPRM R&O. You'll find not
one argument that sustained your viewpoint for any
requirement based on "ancient custom" or for any other
reason.

Cheers,

It was the FCC (Reed Hundt, "the chairman from Mars", and
his band of merry commissioners, all lawyers, none Ham) that
initiated the rulemaking...". If they really cared, why
were there no Hams? (couldn't pass the code test??).

W5YI, the leader of that other great Hamdom enterprise,
claims it was He who led the council of volunteer examiners
in an 11th hour appeal, and used their powers of persuasion
to tilt the FCC to drop code testing. He said the waiver
problem had a big effect. Does the poster dispute his
claims?

It is interesting that after reconstruction (three code
tests to one, 5 licenses to 3, electronic filing, etc.) the
exam fees have tripled. Inflation, I suspect. ;-)

Which does not make alot of sense. Approx. half of the
QSO's on HF are OOK CW Morse. Probably 1% of QSO's on
VHF/UHF (the traditional tech homeland) are OOK CW Morse.

Are there organized groups out there sharpening their knives
to do away with morse code, or "ranges" where
morse code can be used?

> No, sorry, your
> analogy is, as usual, off the point.

I strongly disagree.

> Do you advocate that?

This is an old saw...end all testing. There are good
reasons for theory and regulations testing. No, I'm
not going to waste my time explaining or defending them since
they are NOT under any threat. Morse testing, as
a separate pass/fail is what can't be justified. I and others

have NO issue with incorporation of some knowledge of morse
as a mode in the written tests...there is just no reason to
have a skill test anymore at all.

> >With friends like that, CW doesn't need any enemies

Additionally, many of those "fine" neighbors get equally pissed
off at anything they see that doesn't fit their own mold of
proper suburban gentile living. Don't change the oil in
your driveway, etc.

Cheers,
Bill K2UNK

> radio is a proper ancillary use of residential property, and by
> definition is not "industrial".

Agreed, but there is a continual 24-hour huge "gray line" on
what constitutes esthetic acceptibility in a residential
neighborhood. The typical 1/4 to 1/2 acre residence lots
in city neighborhoods can't support a lot of skywires and/or
multiple beams and still be pleasing to everyone all around
such a "non-industrial" place, however much a within-his-
rights radio amateur states.

That has nothing to do with "conditions and covenants" but
is one of simply getting along with the neighbors. That's a
personal task for every radio amateur who wants to live IN a
radio station. In a typical urban residential area, the radio
amateur is simply outnumbered by neighbors at least 20:1.
In most urban residential areas those neighbors are as much
a citizen as the ham.

Agreed that some care and planning of a residential amateur
station to make it look more pleasing to neighbors is a good
thing, but it doesn't end there. Courts may find for the ham
on "rights" to be a "non-industrial" radio station but that isn't
a final situation. Failure to get along with neighbors leads to
things such as complaints about RFI and possibly worse
situations. All the righteousness in the world may wind up a
Pyrric Victory...for everyone but the attorneys who don't live
in that area anyway...

Those who want to live IN a big radio station should plan to do
so where they have few or no neighbors.

>man. PACTOR II is a serious mode. I can raise a PACTOR II mailbox
>in Germany when I can't even hear the signal.

I will go along with what you've said. A system designed to work
in the presence of very strong noise PLUS having a correction
coding is hard to beat. There are many such in the larger radio
world. Some applications deliberately add pseudo-random
sequences to data to gain a few db of processing power; pseudo-
random sequences are synchronizeable and can be removed by
identical PRSG generators.

What I was referring to is the HF selective fading, quite narrowband
selective fading, which can lead to 20+ db drops in received signal
level. If a circuit is already running with received signal level AT the
noise floor, it will be touch and go if it makes it through such a null.
Commercial and military applications in the TTY-data of the past
simply doubled up the tone pairs of AFSK to overcome the
selective fading. Crude and brute-force though it may have been,
it worked just dandy and was used for decades on commercial
sideband...right on through WW2 and into the 1970s.

The PCTA myth that "phase shift systems can't work on HF"
probably traces back to some disgruntled PCTA wrongly promoting
morsemodes on some "re-arranged" technical data along with very
selective quoting. That sort of thing was tried to "prove" the badness
of GMDSS by pulling out some retired old-time maritimer's posting
from somewhere...and trying to use that in front of the larger body
of mariners who lobbied for and got a worldwide system now in use.

me."

Yes, but in the atmosphere polluted by some in here who have
failed their basic anger-management sessions, one has to resort
to the primitive once in a while.

Electroncs and EM waves just don't respond to threats, orders,
commands, insults, or sweet talk. Human emotions don't affect
them. One meets electrons and EM waves on THEIR terms only.
No doubt some of the angry types haven't been able to
capitulate to physical laws, meet their terms, or much else and
try to take it out on others who have...

>Does this rank right up there with Dick's "go soak your head" on the

Ryan, perhaps its not economically feasable for the ARRL to do this, but I sure wish the national organization has greater participation from the average ham. I think we would have a more balanced organization if this were so.

Send Jim Haynie a message with your suggestion. I think its ARRL numbergram #7147 (discount to first-timers).

```
-------------------------------------------------------------------
A G Z - P r e s s R e l e a s e
-------------------------------------------------------------------
-------------------------------------------------------------------
WRC-03: "National Group" confirms NO to CW exams
-------------------------------------------------------------------
Bonn, March 18th, 2002.

On March 18th 2002 the National Group preparing Germany's position
for WRC-03 met in Bonn again at the Federal Ministry of Economics.
AGZ e.V. and No Code International (NCI) were represented by Dr.
Ralph P. Schorn, DC5JQ.

Again the Group discussed the expected alteration of RR-article
S25.5. Already at their September 2001 meeting, the Group's members
decided to advise the Minister to vote against compulsory Morse
telegraphy exams.

In this context the National Group took note of an opinion poll
that Germay's largest amateur radio club performed among their
members. 52 percent voted in favour of keeping compulsory Morse
exams for shortwave access. The Group, however, expressed no
necessity to change the position defined in September 2001, as
already then a 50:50 situation was assumed among radio amateurs
in Germany. The National Group regards the outcome of the opinion
poll as a confirmation of their September decision against CW
exams.

The National Group supported the position of CEPT's Conference
Preparatory Group (CPG), that on it's Oslo meeting in February
2002 decided on a new text for Article S25.5 being the
preliminary European position:

> Administrations shall determine whether or not a person
> seeking a license to operate an amateur station shall
> prove that he is able to send and receive correctly texts
> in Morse code signals.

Only a single member of the National Group (i.e. DARC) voted against
this position.

According to this, the decision to ask for a Morse exam would be
up to each individual administration. A frequency barrier, being at
30 MHz today, is not desired any more. Representatives of the
Federal Ministry of Economics pointed out, however, that Germany
would not continue Morse telegraphy exams after a change of S25.5
```

and that Germany will not create any national regulation that
deviates from a common European CEPT position.

One click of the BACK button...it was The Congress that mandated that the Commish' review all its rules biennially to deregulate as much as possible. It was just Part 97's time.....

You ought to hear what lunacy the broadcast engineers got to gripe about (loyal member and chapter officer of the Society of Broadcast Engineers).

>If they really cared, why were there no Hams? (couldn't pass the
>code test??).

There hasn't been a ham (or engineer) commissioner since George Sterling in the early 50s. My protege, Dane Ericksen N6AJY whe became a big wheel in the SBE after he left the Commission for the private consulting engineering field actually submitted a Petition for Rulemaking which would jave required one of the Commissionera to be an engineer. It wass roundly voted down by the sitting Vommision.

Anyhow, the staff prepared the revisions and the Commish' just voted on it.

There have been managers and chiefs at the Commish' who felt that staff members who were hams were "fifth columnists" (one bad example who shall remain nameless but some folks here remember him) and therefore no employee should be a ham and those of us who were already hams should not have any contact with ham radio policy or enforcement (but they couln't find support for either of those views) . I had the "good fortune" to work directly for two such chiefs for extended [eriods of time. It wasm't easy.

As far as privitization, the Feds (and now the states and the locals) have found that it is always easier to close their eyes and get someone else to do it (poof - it's not our problem any more) than to do it in-house and make sure that it's done correctly. Yechhhhh...

>It is interesting that after reconstruction (three code
>tests to one, 5 licenses to 3, electronic filing, etc.) the
>exam fees have tripled. Inflation, I suspect. ;-)

Exam fees are set by the "private sector", not by the Commission. Welcome to "privitization"....

Ed:

If the "social rules" you refer to are the rules of mush-minded, mealy-mouthed Political Correctness, then no, I don't believe they apply here. Of course, I don't believe they apply anywhere else, either. I am a person who speaks his mind, doesn't pull his punches, and takes the heat that follows. I don't take popular positions merely for the sake of getting along with whatever majority I am facing at the time. If I disagree, then I let my disagreement be known. And when faced with typical liberal thought-Nazi's, who demand absolute agreement, then I take the gloves off and start letting the good times roll.

Val:

Well, now you can be sure of it. You are (through no fault of
your own), a post-restructuring, dumbed-down amateur radio
operator. Now, having said that, I'll also say that I don't hold
this against you, personally. However, you must recognize,
acknowledge, and live with the fact that there are now two
separate and distinct "classes" of radio amateurs -- those who
ascended through a more comprehensive, challenging, and
beneficial licensing regime, which included the requirement
to learn and be tested in a highly useful communications skill
at a proven-to-be achievable proficiency level -- and those
who have had full amateur privileges handed to them for
significantly less effort spent in developing practical knowledge
and skill. Yes, I do accept you as a full-fledged radio amateur
at whatever license class you hold, but I do not agree with
the "dumbing-down" process which you have, and will, be
forever associated. Personally, I have no doubt that you
could have become a ham and achieved Amateur Extra
class under the pre-1991 licensing requirements. I just
feel that there was no need for these requirements to be
reduced to the level at which they now stand.

>However, a certain amount of
>uncomfortableness with the "new standard" is inevitable, in
>my view.

And that, IMHO, is a very healthy and mature point-of-view.

>We're all only human and therefore have weaknesses.

I agree, and the "weakness" of those who lobbied for, and
received, reduced licensing standards have done nothing to
further the cause of amateur radio. Unfortunately, all they
have done is to permanently install a "Balkanized" relationship
between hams who are separated by a date on a timeline.

>In amateur astronomy, we now have totally "GoTo" telescopes,
>instruments that can find anything in the sky at the touch of a
>few buttons. All you need is the money to afford them and you
>can do things that astro Old Timers still can't dream of doing.

I would accept this as nothing more than the effect of
"consumerism" on the hobby of amateur astronomy. The
reduction of amateur radio licensing standards was born out
of the same gene pool. I cannot speak for the impact this
will have on amateur astronomy, but it is not a good thing
for amateur radio, since the overall learning experience has
been foreshortened in a hobby which is supposed to be all
about learning.

>This has inevitably caused some resentment, in the same way
>that the "RUBIE" phenomenon has P-O'd some Old Timers
>among bikers.

You'll have to explain that one to me.

>I guess I'm old enough to simply expect a certain amount of that.

Again, a healthy point of view. You are obviously not a whiner.
Regardless of how it came to be, welcome to Amateur Radio,
and I hope it will be for you everything that you expect of it. One
thing I know, and have said repeatedly is: Amateur Radio is what
amateur radio operators make of it; and amateur radio operators
are what they make of themselves. That was true in the past,
and always will be true in the future.

Then how about repeating *what I said* if you must, instead of your interpretation of what I said? It's no secret that many beginners have no idea of the benefits or sheer communications usefulness of CW until they have learned it well enough that they gain experience enough to be able to use it well.
I'm aware that there are some clubs where there is an emphasis on newcomers becoming CW literate, but there is a substantial resistance, demonstrated here, to the continuation of that emphasis. It shows up in posts where some advocated of advancement in communications arts denigrate CW in terms we know so well. You know the drill. Why don't you use some of the energy you waste on me in challenging those posters? Do *you* not believe that CW is worth defending? Sure seems like it.

Because he had no license -he just passed his first exam- you automatically categorize him a "rank newcomer"? How do you know what he knows about the ARS, after all he has said he is fulfilling a longtime dream, to become a ham. Maybe he has kept up with the ARS, and he has stated he has read this NG for a year. That alone pretty well qualifies him as knowledgeable on many of the issues.

I'll be watching with interest though in my particular case there aren't any severe problems with antennas. What is happening here in this town is that lot sizes are getting smaller and smaller, even for houses in the $250,000 class, as good building sites are finally about all used up on the level land in town. This puts even very nice homes chock-a-block on top of each other, not very nice for antenna building. Yuck!

The advent of cable has nearly purged this place of antennas around here. Unfortunately, they are the mark now of the parts of town where people can't, or won't, afford antenna-free service. That is, antennas are now viewed by many as eyesores, no matter what kind of antenna you're talking about.

Ouch!

Well, it's gonna be, as a first attempt, a very lightweight yagi, kind of an Arrow clone, only with wire. It's got to be light to sit on the scope and not drag down the slewing motors. But there seem to be a lot of ways to skin this particular cat so I'm not sure what I'll finally end up with. I'll report on progress as it occurs . . . assuming there will BE progress! This is new territory for me. Apparently there is reliable satellite tracking software available for the scope I have access to, and the speeds required do not overload the motors, IF the load is kept down. My goal is to have TV on the optical tube and combine that image with the audio signal. That might be waay cool!

[Larry Roll K3LT wrote, quite a number of things about post-restructuring Balkanization of amateur radio, and the fact that I am a "post-restructuring" ham.]

Well, there you go . . . I almost started down this road in 1997 (and so could have been a pre-restructuring Ham), but my wife put her foot down, "No new hobbies until you drop one! So, motorcycling has had to go on the back burner, a penalty of age, and that took four-plus years to adjust to. I'm gonna keep my Honda Helix but my 350 and 750 are gone gooses!

I'm giving up a lot for radio!

Val

P.S. I'm very glad to have made the decision to join amateur radio and intend to "give back" as much as I can here locally. I think the combination of radio and astronomy, for me, is a natural!

Well, yes, you likely have a point! I was being unnecessarily harsh, I'm sure. In our case, we had a colleage, who was an expert in preference testing, advising us. She had us use three different "modes", each supposedly independent of the others, and what a pain in the rear they were. Then we had to travel several thousand miles, on our own dime, to adminster the things, in person, one-on-one, to assure total reliability, or at least the semblence of same. Yeowww!

Certainly.

Where in my comments did I advocate that he had to limit his conversation?

The problem with UseNet is that people just don't read.

I think I'll resume ignoring UseNet ham radio groups and return to paying
attention to ham radio itself!

Mr. Carroll is right! I have in my hand the notebook I started
FOUR years ago, and it begins with a clip from QST, April '98,
entitled "The Joy of Morse." Then I have clipped an article
from CQ VHF called: "Are You a REAL Ham?" Then there's
a long article that I have marked up, from the April '98 issue
of CQ, called "Restructuring in the Amateur Service." Then
I have a bunch of downloads from the NCI site, and then a
long message from N2EY, from this newsgroup, dated
07May98 and entited, "Give Me A Good Reason to Learn
Code." And then he DOES!

I have over one hundred pages in this notebook, including
many messages from Mr. Heil, Jon Bloom, Mr. Roll, CAM,
and others. I have done some homework on this subject
and would have been a ham in 1997 or 1998 if my wife had
not laid down the law about the number of things I was doing.
I've had to basically abandon motorcycling to do radio, in
a sad testimony to the shortness of life and time.

Amateur Radio Newsline Report 1283 – March 15, 2002

Amateur Radio Newsline report number 1283 with a release date of Friday, March 15th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Restructuring at the FCC should not impact on Amateur Radio and a first for the Dayton Hamvention. These stories are first on Amateur Radio Newsline report number 1283 coming your way right now.

(Billboard Cart Here)

**

REGULATORY ISSUES : FCC REORGANIZES LATER THIS MONTH

A reorganization of the Federal Communications Commission is set to become final later this month. This, as the agency stresses that realignment of responsibilities between various bureaus will make it more efficient and help it better respond to a changing technological marketplace. Amateur Radio Newsline's David Black, KB4KCH, takes a look at some of the changes.

--
It's an independent government agency that reports directly to Congress. It's mission is to regulate communications. One of the services it oversees is Amateur Radio, but most observers of the reorganization of the Federal Communications Commission see little impact on hobby communications.

As part of the reorganization a new Media Bureau will combine the duties of the current Cable and Mass Media bureaus. The goal of the combined bureau? To treat competitors of multiple entertainment delivery systems equally and consistently. This includes broadcasters, cable operators and satellite service providers to name only a few.

Other changes include a renamed Consumer and Governmental Affairs Bureau. Also, a realigned International Bureau still will handle satellite licensing but most policy issues will now be the domain of the newly created Media Bureau.

These are just a few of many changes taking place. Most appear aimed at commercial interests. For ham radio, C-B, G-M-R-S and most two-way radio users the shift will probably be transparent. In other words, for these spectrum users and most others, it looks like business as usual within a soon to be restructured FCC.

From the South-East Bureau in Birmingham Alabama, I'm David Black, KB4KCH, reporting for the Amateur Radio Newsline. Don.

--

Congress endorsed the plan late last year. The FCC then approved the overhaul in January. The changes will take effect March 25th. You can read more on the web at www.fcc.gov. (ARNewsline (tm) from published news reports)

**

RADIO LAW: FCC REFUSES TO SIDE WITH CB'ER IN LOCAL CITATION CASE

The FCC has refused to hear an appeal by an Illinois C-B operator who was convicted of Disorderly Conduct for using an 11 meter Class D Citizens Band Radio. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--
Gary D. White is among the first C-B operators dinged under a new authority granted by the Federal Government to states and municipal law enforcement agencies. Authority to control interference caused by operators of Class D 11 Meter C-B radio sets.

White was convicted on a state Disorderly Conduct charge of operating his C-B equipment in an unreasonably loud, offensive, harassing or threatening manner. He was not convicted of violating any FCC rules. White believed that the citation was based on interference to a neighbors telephone and television receiver. This in itself is not a violation of FCC Part 95 rules. And because of this he also believed that local authorities had no justification to sanction him. So he appealed the conviction to the FCC.

But the FCC says that the proof of guilt on the Disorderly conduct allegation is not in its preview to consider. This is because no FCC rules were violated. Also, under a law enacted by Congress in November of 2000, state and local governments are free to enact laws to enforce existing Part 95 Citizens Radio Service rules.

Bottom line. The FCC will not interfere in the case and White will have to find other avenues if he wishes to continue his appeals.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

Congress enacted the law to give state and local authorities enforcement authority over 11 meter C-B operators due to the rising tide of unnecessary and harmful interference to other people using radio devices in near-by spectrum. This includes corded and wireless telephones, television receivers, stereo Hi-Fi sets and other consumer electronic gear. Ham radio is specifically exempted from the law and any ordinance it may be used to create. (W5YI Report)

**

HAM RADIO RIGHTS: NM. AND W.VA. JOIN THE PRB-1 BANDWAGON

The ARRL Letter reports that New Mexico and West Virginia have become the 14th and 15th states to adopt pro Amateur Radio antenna bills based on the limited

federal preemption known as PRB-1. Amateur Radio Newsline’s Jeff Clark, K8JAC, reports:

We have this report:

--
In New Mexico Governor Gary Johnson signed House Bill 314 on March 5th. This, after it easily passed both houses of the legislature last month with just two opposing votes during a short session that typically only deals with appropriations bills. Called New Mexico's "Emergency Communication Preservation Act" the measure was sponsored by State Representative Mimi Stewart and Senator Ramsay Gorham. It stipulates that municipal or county ordinances regulating Amateur Radio antennas cannot obstruct or preclude amateur radio service communications. Also, that such ordinances shall reasonably accommodate amateur radio service communications.

Here in West Virginia Governor Bob Wise signed House Bill 4335 into law on March 7th. The bill provides that antenna structures may be erected at heights and dimensions sufficient to accommodate amateur radio service communications but does not include a minimum regulatory height schedule. The measure also exempts Amateur Radio antenna towers constructed prior to the effective date from subsequent zoning regulation changes.

From Charleston West Virginia, I’m Jeff Clark, K8JAC.

--

In signing the West Virginia bill into law, Governor Wise, whose late father held the call sign W-A-8-A-Y-P, also proclaimed March 7 as Amateur Radio Operators Appreciation Day across the state. (ARRL)

AMERICA AT WAR: NEW TERRORISM ALERT SYSTEM

The United States has a new color-coded terrorism warning system. It was revealed on Tuesday, March 12th by Homeland Security chief Tom Ridge.

The five-level system is a response to public complaints that broad terror alerts issued by the government since the Sept. 11 attacks raised alarm without providing useful guidance. The lowest-status warning is green, followed by blue, yellow, orange and red as the perceived dangers intensify.

As the terrorism warning system was unveiled, Ridge said that the nation is on yellow alert. This means that the United States is facing a significant risk

of danger but not the highest stage.

The alert system is in force immediately for federal agencies, and Ridge is urging state and local governments to adopt it, too. It will be subject to a 45-day comment period, after which it probably will be revised. It's not known what part if any Amateur Radio will play in the new enhanced terrorism alert scheme. (Published news reports)

**

ENFORCEMENT: TAKE THAT UNCOORDINATED REPEATER OFF THE AIR

The FCC has told the operator of an uncoordinated North Carolina repeater to stop interfering with a coordinated machine, even if it means immediately taking his system off the air. This is the edict handed down to the operators of the NY4X repeater by FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth, K4ZDH.

--
Hollingsworth: " We also notified Richard Howell, NY4X, of Greer South Carolina and John Parker, AG4AZ, of Brevard Norrth Carolina that upon reciept of the letter, the NY4X repeater that they operate had to either shut down, obtain coordination or submit a detailed plan to the Commission to prevent interference to the KU4OL [repeater]."

"Now this interference has been going on for quite some time. We notified Parker and Howell back in November that something had to be done. Nothing was accomplished in regard to coordination and nothing was done in regard to the interference."
--

Hollingsworth letter says that Howell and Parker had more than ample time to fulfill their obligation under Section 97.205 of the Commission's rules. And late word is that the repeater has been shut down. (FCC, RAIN)

**

ENFORCEMENT: TAKE THAT BROKEN REPEATER OFF THE AIR

The NY4X repeater is not the only machine currently under FCC scrutiny. Another one is in Northern California. This one is having technical problems and is causing interference to machines on adjacent channel pairs. Again, the FCC's Riley Hollingsworth, K4ZDH:

--
Hollingsworth: "We notified Wendall Peterson of Walnut Creek California, operator of the K6POU repeater that more than enough time has elapsed for him to correct the technical and control problems with the repeater. His earlier response to our inquiry showed that the bandwidth was indeed so wide that it caused problems to two other repeaters. We have gotten complaints about that. And the repeater system is just not operating in accordance with good Amateur practice."
--

Hollingsworth says that his office expects the problems with the repeater to be corrected or that the machine will be taken off the air. He also gave Peterson 20 days from the date of his letter to respond. (FCC, RAIN)

**

ENFORCEMENT: THE RESPONSIBILITY OF REPEATER OWNERS

The FCC enforcement involving the NY4X and K-6POU repeaters are just the latest in a series of actions aimed at cleaning up the problems that have been plaguing the F-M community. Whether it's an uncoordinated repeater causing havoc to a coordinated machine, or a long established system in need of maintenance, the FCC's Hollingsworth says responsibility comes with repeater ownership:

--
Hollingsworth: "We want to emphasize that repeaters are voluntary. Nobody has to put one up. But if you do put one up you have a responsibility to maintain it, to get coordination if that's necessary, and to operate in accordance with good Amateur practices, especially if other repeaters are being detrimentally affected."
--

In reality, the only things the FCC is asking of those who own and operate repeaters is to be good neighbors and to adhere to the proper technical standards. In this way, the repeaters themselves can better serve their service area and the ham radio community in it. (FCC, RAIN)

**

RESCUE RADIO: KNOWING WHERE YOU ARE IN THE MID WEST

If you drive the highways and by-ways of Kentucky, you need never worry again about where you are. And if you get in a bind, rescuers will be able to find you. That is, if you are a ham radio operator equipped with a mobile APRS station. Jack Parker, W8ISH, of Amateur News Weekly, says that in his part of the world it is a mode that is truly coming of age:

--
Good news from the Kentuckey Automatic Position Reporting Society" their network of APRS digipeters is growing like well bred Kentucky Race Horses.

According to Brian Walker, KC4FIE, several new sites will be coming on line very soon. New digi's are planned for Grand Rivers, Morgantown, Owensboro, Lawrenceburg, and Dry Ridge to name a few.

The Murry State University club has added a digipeter and two stations along the Kentuckey – Tennessee border have extended APRS coverage into that state. These efforts effective extend the Mid-West network of APRS digipeters established by the Tri-State Working Group in Ohio, Indiana and Illinois.

If you need more information on the Automatic Position Reporting System just check the APRS Working Group website at www.tawg.org.

Reporting for Amateur News Weekly, this is Jack Parker, W8ISH.

--

With interest in A-P-R-S growing and ham gear that includes the mode as a standard feature, look for a defacto nationwide network to be in place by the end of the decade. (ANW)

**

HAMVENTION 2002: HAM TESTS WILL BE AT THE HARA

The Dayton Hamvention has asked that we pass along a correction to some information in its recently mailed pre-show brochure. The pamphlet incorrectly lists Meadowdale High School as the venue for Amateur Radio license exams. This is incorrect. The Hamvention says that all license exams will be held at the HARA Arena Hamvention site. (Hamvention(r))

**

HAMVENTION 2002: QCWA BANQUET

And attention QCWA members. This years annual banquet in conjunction with the Dayton Hamvention will be hosted by the South West Ohio chapter and will be held on Friday, May 17th. The venue is Alex's Continental Restaurant near Miamisburg. Starting time is 7:30 P.M. and reservations are required.

This years speaker will be General Raymond Moorman. He will be talking about the United States Air Force Museum and plans for the upcoming Centennial of Flight celebration in 2003. For more information and to make reservations please contact Ed Sonnanstine by e-mail to EdSonny@aol.com (QCWA)

**

CONVENTIONS - UTAH: UTAH HAMFEST

The 2002 Rocky Mountain Division ARRL Convention and 2002 Utah Hamfest will be held July 12th to the 14th at Ruby's Inn at Bryce, Utah. The venue is near Bryce Canyon National Park. For more information please visit www.utahhamfest.org on the world wide web. (Utah Hamfest)

**

CONFERENCES: ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE

Technical papers are being solicited for presentation at the 21st Annual ARRL and TAPR Digital Communications Conference. The event will be held this September in Denver, Colorado. Presentations will also be publicized in the Conference Proceedings. Submission of papers is due by August 5th and in-person presentation at the conference is not required for publication. Conference registration and additional details are available on the web at www.tapr.org/dcc (TAPR, ARRL)

(5 sec pause here)

**

NAMES IN THE NEWS: HELPING HAND NET

We want to take a moment to welcome a new and very interesting net to the Amateur Radio Newsline family. It is on the AD6XK repeater here in Los Angeles California on 145.440 MHz.

What makes this net very special is that its Control Operator Simon Rosconi, K6DXN, is visually impaired. According to Dave Estrada, KD6HDX, Rosconi lost his vision at age 6. Estrada says that even without sight, Rosconi works 40 hours a week, and still finds time to volunteer his time as control operator for the nets.

But Rosconi is not the only vision impaired ham involved. Estrada tells Amateur Radio Newsline that Brian Coponiti, KG6BVO, who is also partially blind, has also volunteered. Coponiti downloads and plays back Amateur Radio Newsline to the net.

Estrada adds that this particular repeater group also has two other operators that are visually impaired. They are Gary La Duke, WB6WJW and Ivan Simer, K6TTA. (KD6HDX)

**

NAMES IN THE NEWS: EDWARD T. CLEGG, W8LOY FAMILY CELEBRATION

A few weeks ago we told you about plans by the family of the late Edward T. Clegg, W8LOY, to celebrate the life of this ham radio pioneer. The gathering is being planned by Ed’s widow Martie, her daughter Linda and Linda’s husband Rob Mc Guffie, K2HZN. Recently, RAIN producer Hap Holly, KC9RP, had a chance to speak with Rob about the upcoming event:

RADIO REGULATIONS: AVOIDING A PHONE NUMBER CRUNCH

The nation's supply of telephone phone numbers is depleting rapidly and the government is taking steps to make sure what is left lasts longer. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has more:

--
Over the past several years, area codes have multiplied to cope with the

explosion in technology. Regions have responded by splitting up area codes among geographic areas or laying another area code over an existing one.

But in 1996 the Federal Communications Commission banned such overlays dedicated to specific kinds of technology. The Commission enacted the ban because it considered separate area codes for cellular telephones phones and pagers unfair to wireless companies and their customers. This is because everyone would have to dial 10 digits instead of seven to reach wireless customers.

But states including California, Massachusetts and Ohio had been been asking for ways to prevent existing area codes from running out of phone numbers, the agency said. The FCC says that it will now hear proposals from states on how they intend to conserve area codes on a case-by-case basis, including plans to use technology-specific area codes.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in West Orange New Jersey.

--

The FCC, which is responsible for overseeing the supply of phone numbers, says that without action the number pool will run out in less than ten years. (FCC)

**

HAM RADIO BUSINESS: A NEW HOME FOR VERTEX STANDARD/YAESU

Vertex Standard USA, better known in ham radio circles as Yaesu, is moving to a huge, beautiful new facility. The new address is Vertex Standard U-S-A, 10900 Walker Street, Cypress, California, 90630. The new main phone number is area code 714-827-7600. All e-mail addresses will remain the same but telephone extensions will change. Vertex Standard makes the move -- no joke -- on Monday, April 1st. (Vertex-Standard)

**

INTERNATIONAL-CANADA: VE7BFK IS NEW RAC ARDF COORDINATOR

Radio Amateurs of Canada has named Gordon Young, VE7BFK as it's news R-A-C National Amateur Radio Direction Finding Coordinator. Young replaces Perry Creighton, VA7PC who held that appointment for the past several years. (RAC)

**

CONTESTS: SOUTH WEST OKLAHOMA SPRINTS

The first ever South West Oklahoma Spring Sprints sponsored by the Lawton VHF Contesting Club will take place in just a few weeks. Sprints are short period contests held primarily on a specific band or using a specific mode. The South West Oklahoma Spring Sprints are band exclusive. The 2 meter sprint is on April 1st from 7 pm to 11 p.m. Central U-S time. The 70 centimeter sprint is April 13th also from 7 to 11 Central. Both are open to all Oklahoma hams living south of Interstate highway 40 and West of Interstate 35. For more

information e-mail ne0p@arrl.net (VHF Reflector)

**

DX

In DX, K8PT and K3PLV are in the Channel Islands and operating as MJ slash K8PT and MJ slash K3PLV from Jersey through the 19th of March. The emphasis is on CW and RTTY in the WARC bands during daylight and 30, 40 and 80 meters during the evenings. Q-S-L as directed on the air. (RSGB)

Also word that Laurence Howell, GM4DMA, who is now resident in Anchorage, Alaska, will be travelling to warmer climates. This, as part of his work for the youth development charity Raleigh International. Howell say that he plans to be active as V51 slash G4DMA from Namibia from the 16th of March for two weeks. Look for him on 160 through 6 meters as his work schedule allows. (RSGB)

**
THAT FINAL ITEM: A WEDDING AT HAMVENTION 2002

And finally this week, get ready for a first. The first ever wedding to be held at the Dayton Hamvention.

No, we are not kidding. For the first time in Hamvention history, wedding vows will be exchanged at the show. This as Cyndi Krieger and Mark Elliot, N8WZW, will be married Saturday, May 18th at the HARA Arena during Hamvention 2002.

Mark and Cyndi met about thirteen years ago through a mutual friend. On their first date Mark and Cyndi went out for dinner and a movie. According to Hamvention sources, they have been an "item" ever since.

Mark introduced Cyndi to amateur radio by going to a hamfest. Cyndi had no idea what a hamfest was, but it sounded interesting. It was and she was hooked! Cyndi is now studying for her license and may test for it before Hamvention weekend.

Why get married at Hamvention? Mark and Cyndi couldn't think of a better place to share their love for each other and for amateur radio than by getting married at the world's largest amateur radio trade show. The ceremony takes place at 3 PM in Forum Room 3 immediately following the Amateur Radio Newsline produced Ham Radio Town Meeting. (Hamvention (r))

2147. HF after Code Testing Ends

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-21 15:24:13 UTC
From: Valentine Germann <vgermann@socket.net>
Message-ID: <u9jtnhaflj614d@corp.supernews.com>
Source record: 38192

Hello, all!

So, by sometime in 2004 (?) code testing here in the USA
will be at an end, for any class of license.

1) Are there any estimates of how many Technicians
will effectively upgrade, and in what time frame? That
is, passing the General test doesn't get you a radio, or
a station, or an antenna system. All of that takes money
and space, covenants or no. I wonder how many of
today's Technicians are in a position to EFFECTIVELY
get on HF when the rules change in '03 or '04 or '05,
whenever. In any event, consideration of this problem
perhaps explains the strength of the hand-wringing over
covenants in the March QST!

Val

2148. Remotely Controlled HF for New Upgrades?

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-21 15:35:39 UTC
From: Valentine Germann <vgermann@socket.net>
Message-ID: <u9jud3cngh145@corp.supernews.com>
Source record: 38193

Hello, all!

No doubt this has been done since there are
very few truly new ideas under the sun. Anyway,
it seems possible to overcome some of the
problems the new upgrading Technicians are
going to have, with their move to HF, through the
use of what amounts to a community antenna.
Once code is dropped there will be a relative
flood of such people, will there not?

The local club (of which I am a new member)
has a serious HF station in a good location here
in town. Why not operate that station remotely,
using a computer? That is, through the InterNet,
amateur astronomers can get time on mountain
top telescopes and operate them from home,
making observations that are simply not possible
for them any other way.

In similiar fashion, a brand new General, with
only VHF equipment and InterNet access,
might turn on his club HF station, aim the beam,
and begin operations, using a virtual radio on
his computer that would be repeated at the
club station. Has this been done? Surely it
has been. It sounds like a natural to me, in
some ways.

I agree. There is an extreme rightwing element in HAM radio, and alot of these extremeist own repeater equipment, etc.... Also, they exist on every band. There are some of those types here in this area where I live. The best way to handle it is to get your own group of locals together, and use another repeater, or better yet there is always simplex. When people/clubs setup a repeater or repeater system, it acts as a status symbol. You know "We are cool cause we got our own repeater" type thing. I say let them keep their coolness and steer clear. If you just have to communicate on that frequency, just go Simplex on the output. That way you are not using their equipment, and you are not causing interference either.

Too many people out there who want to make contact with you to have to deal with afew snobby knuckle-heads.

As far as death to the hobby, that is in the hands of marketing. All you have to do is make it the cool thing and people will get in it again. Come out with some Tom Cruize movie about "Modern Radio" I will bet every kid will be in a Tech class.(Just like Kung Fu, Golf, computer hacking, saggy painters pants, and Tony Bennett). Who would have ever thought that it would be cool to walkaround in sagging pants? If marketing can do that, it can be done with radio also. Problem is, some of them old foggies and elitists out there dont want a lot of people in the hobby. Not enough money in it for it to make the investment to market it. So here we sit.

Dick,

That was NOT why I joined some 25 years ago ... keeping
an eye on what they were up to code-wise was a part of
why I maintained membership during many years when
their position on code was directly opposite to my position.
However, they have also always done good things ... that
I have never disupted ... my main dispute with ARRL in the
past was on the code issue and believing that they were
not proactively encouraging technical progress and advancement
in the ARS ... they seem to have improved on both counts
and I'm more pleased with ARRL now than I was for many
years of my membership.

Times change ... but that seems to be a difficult concept
for you to accept.

This type of operation is pretty common. It usually consists
of a remote base controlled through a 70cm transceiver link.
Some type of controller interface must exist between the remote
70cm transceiver and the remote HF base station but it doesn't
have to be very sophisticated. A microcontroller is a logical
choice for the controller but I have seen it done with a few
discrete IC's.

When I lived in AZ, I could do HF QSO's through my home base
station using the 70cm transceiver in my truck. Sure beat a
75m Hamstick.

>covenants in the March QST!

No need to look to future hams for the reason for the hand wringing, Val. There are more than enough problems right now to cause ARRL to take action. Over the years, it has tried, without success, to get the FCC to add CC&Rs to its limited pre-emption of zoning regs. The last go around, the Commission was clear that it was not going to do so unless required by Congress. What you are seeing is the latest move to resond to that.

I believe that Phil Kane has some direct involvement in ARRL's strategy, so he can speak to this a bit more accurately.

>All of that will tune you in to those that are vocal and involved...to wit,
>the
>small percentage of movers and shakers...not necessarily any true
>majority. Nothing wrong with that, but it sure ain't "representative".

If there are those who desire to ignore the opportunity to participate in
their government (organization, club, association, etc etc etc) then that is
thier option.

My experience is that when things start going contrary to the general core
values of the community, more become vocal.

>>Feigned ignorance does not suit you, Bill.
>
>I have no clue what your comment is intended to convey.

Perhaps not as "feigned" as I thought, which is disappointing.

>> I asked for some sort of specific, Bill. Are you unable to produce
>even
>> one? Not ONE single elected office that cannot be recalled by popular or
>> Congressional vote?
>
>I already said there are some. Which ones, who cares?

I care. YOU said there were cases in which recall was not possible. In
order to make that statement, I would assume (yes...I KNOW what happens when
you "assume") that you had some knowledge of at least ONE example. Obviously
you don't, ergo I have to assume it was not your mouth you were speaking
from.....

>> If the President of the United States can be recalled or impeached,
>what
>> lesser office could be impervious to the whims of the electorate?
>
>The president can't be "recalled". Impeached - Yes, recalled No.
>There is a difference.

Yes, there IS a difference...Yet I have used both to point out that any
elected office is tentative upon the ONGOING consent of the electorate.

>>Just one, Bill. Please.
>
> I already said there are some. Which ones, who cares?

As I said, >I< care. YOU said there were examples. I have asked you for one. I have to assume (again) you were simply being argumentative.

>>But not by recent events, it's not.
>
>Even by recent events it is rare. One such incident does not
>make it commonplace.

I would hope that it was even more rare, but that it has happened at least twice that I can recall in the last year or so shows that the ARRL >IS< proactive in assuring that "elected" officials do what it is they were elected to do...Not simply bask in the glory of having won the election.

>> There have been several premature
>> changes in ARRL field leadership in RECENT years that were precipitated by
>> "cause", rather than by resignation for personal reasons or death of the
>office
>> holder.
>
>I'm only aware of one.

I am sure we could dig through QST and come up with the answers...Or simply write them and ask them. One, I believe was one of the New England sections, the other was down Dixie way.

>> >Situation normal.
>>
>> Apathy fits you even less than feigned ignorance, Bill.
>
>Who said I was apathetic. I merely pointed out that MOST folks
>just go with the flow. Reality...deal with it.

I AM dealing with your apathy, Bill....Also your predisposition to make assertions that you cannot validate.

>But ONCE elected, the indivdiual makes his/her own judgements
>on how to vote. Piss off enough constituents and s/he won't get reelected.

Isn't that what I have said? FAIL to represent the people to THIER satisfaction, and get "fired". Fail to do it on an important issue, and get "fired" sooner than later.

>>That obscure part that says "We, The People".
>
>That's great philosophy, but it isn't "The law". No one
>has ever been impeached for breaking "we the people" concepts.

No...he just got ran out of office BEFORE they could impeach him...

>Your point?

My "point" is that there are a great many things that occur in American law that are not spelled out word-for-word, yet we take them for granted as "givens". One of them being the concept that people elected to public office shall meet the expectations of the people who voted for them.

>Like I said, reality.

Ohhhhhhhh kay.

When using SOMEONE ELSES repeater, you should use COMMON COURTESY to share the stage, so to speak and not get into confrontational conversations. If you want to utilize your soapbox, go to a simplex frequency and have at it! Repeaters are for sharing, not preaching.

Might as well study for and do the extra. CW ain't that bad,
maybe you'll get into it and have daily skeds with Larry while
he's driving his bus. The test is done Farnsworth style, that
is, 13 or so wpm characters with 5wpm spacing. Idea is that
you will get faster quicker than with code sent with characters
sent at 5wpm.

I don't think this is the thing I'm asking about. The system
under consideration would use the InterNet and a computer
to put a remote operator in control of a station. That control
would extend to antenna rotation, the works, if possible.

>When I lived in AZ, I could do HF QSO's through my home
>base station using the 70cm transceiver in my truck. Sure

When Larry types the words "politically correct," you can be sure that what
follows will be a near-random string of buzzwords. "Liberal" and "Nazi" are
both intended to evoke a response, so it is not surprising that he strung them
together.

I didn't read that into Val's post at all, Cecil. Do you believe that the FCC didn't have any vision at all about what changes they wanted to make in the Amateur Radio Service before the initiated the NOIs and NPRMs?

"skids were greased well in advance, and far behind the scenes",
sounds like a conspiracy to me, Ed. Do you think the FCC had its
collective mind made up before the NOIs and NPRMs? From the looks
of their first attempts, it seemed to me that they had given it
absolutely no thought at all.

When will you finally discuss what I actually say, instead of what you wish I had said? I said long ago that so few will be inclined to actually learn Morse code without a test that it will inevitably fade out as a viable communications mode.

The population could be exploding and it wouldn't be declining
or static. If it increased by only one person, it wouldn't be
static. It would be an extremely low probability event if the
amateur radio population ever remained static (unchanging).

> > That's a falsehood, Dick. You were using a computer for PSK31 but not

You were attempting to use a computer, apparently rather poorly,
in order to copy PSK31. You were NOT attempting to use a computer
to copy the Morse code. You were NOT using the same hardware
or software - apples and oranges.

>claims?

I am not sure what claims you want me to dispute. Fred's statements to the FCC are hanging out there for all to see. I agree that the waiver problem had a big effect; the FCC more than likely got quite tired of the angry complaints about abuses.

>> The code test speed to obtain an Extra is the same as that required to

>Which does not make alot of sense. Aprox. half of the
>QSO's on HF are OOK CW Morse. Probably 1% of QSO's on

>VHF/UHF (the traditional tech homeland) are OOK CW Morse.

There is a code test for HF access; none for VHF+ access. That seems to track the numbers you cited.

ARRL wanted to see multiple code-speed tests; their comments to the FCC asked for 5 wpm for Tech+, 5 wpm for General and 12 wpm for Extra.

You implied Shannon might be wrong when you asked if it were possible that
CW fell through a crack in Shannon's Theorem. Shannon's Theorem has no
known cracks. If you could prove the theorem wrong, you would be famous.

Yes, it seems as though the FCC, and a concensus
of others with influence, have known where they have
wanted to go for some time. Hey, it's the way the
world works, through the interaction of various groups
and, er, factions. Always has; always will, I think.

So, now, looking down the road again, do you see
coming any pressure for the elimination of the CW-only
parts of the various bands? I mean serious pressure,
the kind of pressure that has done away with the testing.

For whatever reason, no group with true influence
stood up for code testing, anywhere, here or in Europe,
apparently, which all but guaranteed its demise. Will
we see this scenario repeated with the band plans
or has the intended effect been attained?

Val

From my reading of that first restructuring publication from the FCC, they didn't have a clue. I can't remember if it was an NOI or NPRM but that first draft was absolutely pitiful. It appeared to have been written by someone without a clue and without any knowledge of ham radio.

> So, now, looking down the road again, do you see
> coming any pressure for the elimination of the CW-only
> parts of the various bands?

There are no CW-only parts of ham bands except on VHF. CW is allowed on all HF ham frequencies (except for a strange exception in Alaska). I don't expect to see the CW-anywhere-and-everywhere rule changed.

>Congress. What you are seeing is the latest move to resond
>to that. I believe that Phil Kane has some direct involvement
>in ARRL's strategy, so he can speak to this a bit more accurately.

This is a mighty tall hill that the FCC has asked the ARRL
to climb, isn't it?. In looking at the article on page 15, in the
March QST, it seems obvious from the chronology there
that something of a wall has been hit. Statements like, "the
FCC has suggested that ARRL take a major and complex
issue to Congress for a decision" . . . and . . . "exactly
how the Congress should fit such a "statutory directive" into
the end-of-session, pre-election frenzy of activity remains
unknown," are not encouraging. Also, the fact that Republican
administrations, for the last 20 years, have been getting the
Federal Government OUT of local land-use planning, does not
bode well for moving anti-covenant plans along, in my view.
Finally, how does the ARRL's 501c status influence this whole
business? That is, I didn't think 501c organizations could, by
law, lobby Congess?

What a sticky wicket, indeed.

Val

2180. FCC Straw in the Regulatory Wind

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-21 23:06:47 UTC
From: Valentine Germann <vgermann@socket.net>
Message-ID: <u9kor2s6qua22d@corp.supernews.com>
Source record: 38124

Hello, all!

From another newsgroup, the good news of
an interfering CB operator getting the kabosh.
This is NOT helping amateur radio at all, with
people concerned about residential antennas.
And Ham Radio is exempt under the authority
granted state and local entities. The knife cuts
so MANY ways!

Val

(AR Newsline, Mar 15)

RADIO LAW: FCC REFUSES TO SIDE WITH
CBER IN LOCAL CITATION CASE

The FCC has refused to hear an appeal by an Illinois C-B operator
who was onvicted of Disorderly Conduct for using an 11 meter
Class D Citizens Band Radio.

Gary D. White is among the first C-B operators dinged under a new
authority granted by the Federal Government to states and municipal
law enforcement agencies. Authority to control interference caused
by operators of Class D 11Meter C-B radio sets.

White was convicted on a state Disorderly Conduct charge of
operating his C-B equipment in an unreasonably loud, offensive,
harassing or threatening manner. He was not convicted of violating
any FCC rules. White believed that the citation was based on
interference to a neighbors telephone and television receiver. This
in itself is not a violation of FCC Part 95 rules. And because
of this he also believed that local authorities had no justification to
sanction him. So he appealed the conviction to the FCC.

But the FCC says that the proof of guilt on the Disorderly conduct
allegation is not in its purview to consider. This is because no FCC
rules were violated. Also, under a law enacted by Congress in
November of 2000, state and local governments are free to enact
laws to enforce existing Part 95 Citizens Radio Service rules.

Bottom line. The FCC will not interfere in the case and White will
have to find other avenues if he wishes to continue his appeals.

--
Congress enacted the law to give state and local authorities enforcement
authority over 11 meter C-B operators due to the rising tide of unnecessary

and harmful interference to other people using radio devices in near-by spectrum. This includes corded and wireless telephones, television receivers, stereo Hi-Fi sets and other consumer electronic gear. Ham radio is specificallyexempted from the law and any ordinance it may be used to create.

It's being done by a friend of mine with the HF rig at a former VOA transmitter site using a "retired" USAF SSB remote-controlled base transceiver.

It's limited to CW at the present time - he's the former manager of a now-closed Marine Coast Station, and he moved the rig from that station to the present site when the station closed several years ago.

The only two bands that are CW only are 50.0-50.1 and 144.0-144.1 MHz. And, interestingly, no-code Technician's can operate there. :-)

Virtually every other amateur frequency can be used for OOK CW.

If you are asking if I think the FCC might want to prohibit CW in the bands where it is now permitted, I don't see that in the cards. If you are asking if the FCC would eliminate mode sub-bands, I don't think they will; there is nothing in it for the FCC, and they might actually benefit from keeping digital/CW and phone/image separate. Imagine the QRM complaints they would receive if mode sub-bands were eliminated altogether.

>I could be wrong in this. It simply seems this way, to me.

Actually, Val, over the past 3 years, enforcement has taken a very positive turn. Riley came to ARRL HQ and told us that the FCC was back in the enforcement business for the long run. So far, that has proved to hold.

>Surely that is not unreasonable?

ARRL thought so. When the restructuring NPRM was on the plate, they asked for a 5 wpm General and a 12 wpm Extra.

At the time, my personal views were that amateur radio should have a 20 wpm Extra that gained only the lower 25 kHz of 80, 40, 20, 15 and 10 meters. I would have gone to 5 wpm for the General.

Of course, I didn't get to make the decision. :-)

Then you don't believe that CW has enough value that people will learn it
without a test.

What you say will, IMHO, discourage hams from learning it.

Well, ah, isn't it true that there are parts of various
bands where, er, ah, phone isn't supposed to be used
and, ah, CW more or less is free to roam unopposed,
except for FSK? Let's not mince words. Will NCI, and
the factions they perhaps speak for, now shift gears and
push to allow as much phone space as they can get?

Maybe. When ARRL filed its Reply Comments wrt the 70 cm RFID petition on the plate, do you believe they represented the interests of most amateurs? When they worked with HomePlug, Home Phone Networking and the VDSL standards committees to help persuade them to include spectral notches in the ham bands, do you believe they represented the interests of most amateurs?

These are just a couple of examples from my own work. I believe these actions represented nearly every ham. I think that other other 3/4 of the ham population is obligated to the 1/4 that helped pay for it.

The skids needed no grease. The procode test advocates
had full recourse to comment and provide every "pro-code
test" argument they could. Each and every such argument
failed...and they were all reported in the R&O.

As for Europe...what's happening there?

> Once the

What CW only portions of the bands?
There are ONLY two CW only band segments and
they are both VHF (i.e. 50.0-50.1 and 144.0-144.1)

> I mean serious pressure,
> the kind of pressure that has done away with the testing.

Conspiracy theory again?

> For whatever reason, no group with true influence

> apparently, which all but guaranteed its demise.

That's because no group could "justify" the need
for continued code testing based on clear, rational
and compelling arguments.

> Will we see this scenario repeated with the band plans
> or has the intended effect been attained?

Depends on how much you believe in conspiracy
theories.

I can't speak for "the factions" and can say this for the moment
regarding NCI's positions. NCI has no current intent
to push to allow as much phone space as can be had.
If NCI board voted to do so, I'd oppose it.

Hello there Ed ... Well I certainly agree with the above statement. I can't understand the logic in ARRL bashing if you are NOT a member. I have not been in agreement with every league action but I do see where positive things have been done over the years. I would equate the situation with voting ... no vote ergo no right to complain.

>Assuming one can erect a community antenna.

In the zoning cases I have been involved with, opponents of the ham antenna have suggested that the ham should put up an antenna in a local business area, where antennas would be permitted.

Unfortunately, the state of amateur practice with remote control makes it an expensive proposition with limited application.

ARRL was criticized in both directions for that position.

>Of course, if the whole thing was going away anyway, and they
>knew it . . .

The League put a lot more effort into defending that position that "decorum" required. It stopped short of a Petition for Reconsideration on that aspect of the rules change because it could really not offer the Commission any additional argument than it had already made.

They say that they will not; their sole goal is the elimination of the code tests. NCI's Executive Director is personally opposed to seeing an expansion of the phone bands and has said so publically. NCI did not lynch him.

I can't promise that no one will seek an expansion of the phone/image mode sub-bands, but I don't believe it will come from NCI.

ARRL has a Novice-band refarming proposal that it has floated to its membership seeking to divvy up the Novice bands, with some expansion of phone.

Listen on 75 meters tonight and compare the occupancyof the phone part of the band to the CW part of the band and tell me which mode is getting the short end of the stick.

As a CW op, I think that all I have a right to expect is that my access to the band is fair. If the CW bands go unused, we cannot expect the mode allocations would not be adjusted to account for that.

I am not a member of any extremist group, but I very much disapprove of and
criticize their actions.

The right to "bashing" is a very fundamental one, guaranteed to us in the US by
our constitution.

What non-members cannot expect is that their views will carry as much weight
with the ARRL Board of Directors as the views of members.

Bill is correct in his statement of NCI policy ... in fact,
it would be correct to drop the word "current" from his
statement above.

If you search the archives (or just take my word for it),
I have also stated that I would oppose any move to
expand the phone bands ... because I don't believe
that it's necessary and I don't believe we should compromise
the future growth of narrowband digital modes.

Ed is correct ... of course :-)

As far as your question regarding "pressure" ... let's expand
the context from what, as Ed points out are VERY limited
CW-only bands to "the frequencies where CW is currently
allowed." Will NCI seek to ban or restrict CW usage? NO.
That has been categorically stated here so many times that
I'm frankly getting tired of having to repeat it ...

> If you are asking if I think the FCC might want to prohibit CW in the
bands

While in most of the world, there are no such sub-band-by-mode
restrictions, and it doesn't seem to have caused huge problems
prompting those other administrations to enact any, I agree with
Ed that the FCC will probalbly keep some separation ...though it
may be modified a bit, as someone else (Richard?) suggested to
"narrowband in the lower part (i.e., CW and current digital)" and
"widerband" in the upper part (i.e. SSB, SSTV, digital voice, and
digital data, where the data rates are higher and the bandwidth is
wider than allowed in the lower parts ... keep in mind that digital
voice is legal now, provided that the bandwidth limitations are met,
and since "bits is bits" in a digital system, it seems not to make a
lot of sense to limit digital to "voice only").

The bands are essentially divided between narrow band modes
and broad band modes but CW is allowed virtually everywhere.

Please add my SK friend, W7FEZ, to that list. And I think
the expression is, "Go with God" which in Spanish is
something like, "Vaya con Dios", an imperative form of
"ir" (to go).

Here is the answer to your question. It sounded to me as it seems it
did to others that if you are tired of the conversation that it should
end.

>The problem with UseNet is that people just don't read.

>I think I'll resume ignoring UseNet ham radio groups and return to paying
>attention to ham radio itself!

Here, my fellow hams, is exactly the problem I am talking about. If
you happen to have something to say that is not to there likening they
just ignore you both here, in type, and on the radio in hopes that you
will just go away.

Here is a little something I found on a web page don't ask me what
page because it was like 3am and I had one foot in the bed when I
e-mail it to my self. Someone else that has my opinion and seems like
he knows the area very well.

To the author of this I hope that you do not mind me using your words
for my point and if you do see this here please e-mail me I would love
to talk to you a little more in depth.

"Ham radio can be an exciting hobby. Being able to join different
groups that are involved in emergency communications and Red Cross
activities, and a chance to meet new people. What happened in
Cincinnati? The local Tri-State area has quite a different twist on
ham radio. First off, the 2M band is filled with mostly jammers, lids
and other clueless people. The 1.25M band is basically empty. The 70Cm
band is filled with mostly clueless "EMERGENCY SERVICE" operators that
down grade the hobby more than support it. This town has many open
repeaters on the air but a few short conversations will tell you that
they are mostly ego driven, self centered operators who only care
about sounding and looking good for whomever they are trying to
impress. I have monitored many so called EMERGENCY SERVICE nets,
including the local "SKYWARN" group only to hear fancy attitudes, over
structured management and "window dressing" like no other town or city

I have ever seen or heard. These operators, in the name of "AMATEUR RADIO SERVICE" have no regard for public service that I or others have observed but rather use their position for press exposure and ego stroking. The NWS in the local area seems to be just about as clueless with the issuance of timely watch and /or warning statements. How sad that all the time, money and equipment in the Tri-State Area is WASTED for a bunch of self serving groups who's only goal seems to be frequency spectrum domination and fame. My heart goes out to all those who live in this area and I can only hope that one day, perhaps, regular communications with regular operators can once again be monitored in the Amateur Radio Service. Until that time I guess the Cincinnati Area will remain a "RADIO WASTELAND"."

>
>There are no CW-only parts of ham bands except on VHF.
>CW is allowed on all HF ham frequencies (except for a
>strange exception in Alaska). I don't expect to see the
>CW-anywhere-and-everywhere rule changed.

The two CW-only ham bands are 50.0 to 50.1 MHz and
144.0 to 144.1 MHz but there are three more CW-only bands
which apply ONLY to Novice and Technician Plus classes:
3675 to 3725 KHz, 7100 to 7150 KHz, and 21.1 to 21.2 KHz.
[source: ARRL on-line "US Amateur Bands" image (copyright
2000 ARRL) dated April 15, 2000.

In addition the two VHF CW-only bands don't apply to Novices
so one can't say those two VHF sub-bands are really and
truly "CW-only" because of that Novice restriction. :-)

While no new Novice or Technician Plus license classes are
granted, those that still exist are good until their expiration.
So, it becomes a problem of definition. Since the 6 and 2 m
sub-bands are all okay for any class BUT Novices, are they
"really" CW-only? Those sub-bands are okay for Technician
Plus but not for Novice. Down in the three HF sub-bands, those
frequencies for CW-only apply just to Novice and Tech Plus...
BUT General, Advanced, and Extra can all work CW, RTTY,
and Data in them. All of the sub-bands mentioned are AND
aren't "CW-only" depending on other qualifiers. :-) :-) :-)

Okay, now which is what? :-)

A point I have made to my ARRL Director.

Unfortunately, I waited until the last possible minute to give Tom my member input that I felt htat the Novice refarming open that spectrum to all modes, with any bandwidth up to 50 kHz, just to see how sub-band with no mode restrictions would work in the US.

OK Ed ...fill me in on some history. I remember that there was a poll taken some years ago regarding the use of mail forwarding by "automatic" stations on HF. I also remember, I think, that there was a resounding negative for this. However again as I recall, there was a lot of noise made by non-members regarding getting this agenda through. Didn't the league "cave" or do I have it wrong. It seems that the poll was deferred in some manner. Correct me if I am wrong as this was a while back and I am not sure of the details. 73 Tom KI3R

Bob:

I sure hope not! Maryland is such a Socialist State, that I wouldn't be
surprised to find a red flag with a sickle and hammer flying over the
state legislature in Annapolis! In Delaware we enjoy a much higher
level of freedom, even though Gov. Minner is doing her best to change
that! BTW, I live in Dover, which is the capital of Delaware.

My advice is to NEVER listen to Morse characters sent slower than
the Farnsworth 16 WPM speed. Even at 13 WPM, you can still
count "dots and dashes," and are not hearing each character as a
complete, distinctive sound. When you hear the letter "C," you should
hear and react to the sound "dadidadit" -- and not be hearing "dah dit
dah dit." You don't get the "sound" of the character until the
sending speed is at LEAST 16 WPM. 20 WPM would be better,
25 WPM would be ideal. Once you can recognize and react to all
the characters sent at those higher speeds, all you need to do is
develop the ability to write them down fast enough to "copy" at that
speed. A lot of people prefer "cursive" writing, however, I find printing
in lower-case letters is just as fast, and a lot more legible. Printing in
block-capital letters will limit your copying speed to no more than
15 WPM or so.

Dick:

I wish I could figure out what you mean by that. I've heard lots of people say that Delaware is inaccessible, but it really isn't. The tricky part is finding the right exit off of I-95, or the right "back road" off of US 50/302 if coming from the West. Dover is the state capital; I live 2 miles from Legislative Hall and about an equal distance from the Governor's mansion. The capital of Maryland is Annapolis, easily accessible from US 50, about 45 miles East of Washington, DC. If you plan on a visit and need specific directions, let me know.

Try to get to Dover on an airplane, or Annapolis, when your main aim in life is taking the Insurance Commish to lunch and assuring him that albeit small, Delaware ranks uppermost in your mind and heart. It has, BTW, the only real no-fault law in the US as well as some really good places for an expense account lunch.

When you gonna learn?? FCC itself knows next to nothing about the ARS, and relies entirely on a couple of (ostensibly) knowledgeable staffers, whose output is rubberstamped once it has been run past the legal eagles to make sure nothing too embarrassing in the way of legal ramifications is likely to ensue as a result.

> From the looks
> of their first attempts, it seemed to me that they had given it

Nothing obscure about that, either. Obviously you aren't that familiar with bureaucracies. The original write was done by the low guy on the totem, hired last week right out of college. What he knew was so little that he made most of it up. The revision was done by or at the dictation of his supervisor, who knew a little more.

Maybe the moon is made of green cheese, too. Your ego just can't stand it that
there are a lot of hams who agree with me instead of you.

Val, you have to overlook CAM, he has lots of problems with
mosquitos there in South Texas, and often confuses the lil' black
things with micro-helicopters.

We can't help it if your pet skunk like to cuddle up close, Cec. Val is not so unusual, in fact far more people in their 40's and early 50's are getting into ham radio after years of kibitzing these days than there are kids.

If CW was nothing more than a novelty or an "ancient custom" there would indeed be no point in anything more than novelty status, and no reason whatever for anyone to be even encouraged to learn it. Since it is a very viable, useful and efficient mode of radiocommunications, that is not the case. Seems only reasonable that anyone who ascribes to be a ham radio operator would be more than agreeable to learn the most basic of radio communications modes. To skip the basics, missing out on the mode most easily implemented, save the effort required to become a user, seems to make a very negative statement about those who advocate it being dropped.

Well, it's easy to see where you come from. You actually believe, against all evidence, that I want CW to go away. That's your line, and that of NCI. A few of you guys are masters at obfuscation.

What I implied is that there is more to the story that theory, and clearly there is.

Be careful what you say for you may be termed a liar. The existance of waivers was not the problem, their misuse was. Far too many MD's would write out a waiver slip on request with no justification.

If CW doesn't go away, you will have been proven wrong. Do you enjoy
being proved wrong or do you try not to be wrong? If you do not like
to be wrong then you will necessarily want CW to go away.

If he can, I bet that would be an earth-shaking story in one of the IEEE
proceedings.

Dick, what would help here is an example of that "more to the story," showing
how a human is able to decode OOK CW below Shannon's limit. That is, I assume,
what you mean by "more to the story." If I am mistaken, please do explain what
that "more to the story" is.

At least one of those FCC staffers is a pretty active ham. I think he is at
least as knowledgeable about ham radio as you and me. I think we can also
safely conclude that he knows more about spectrum allocation that you and me,
considering that he does it for a living.

Hi, Tom,

I really didnt' follow that one very closely. I wouldn't say that non-members have zero influence over ARRL policy, just that non-members cannot expect that they will carry as much weight with the Board as do members.

I know that there were certainly people who wanted to see automated digital operation be permitted on HF. I didn't see any indication, however, as to whether those people were ARRL members or not. I am curious, on what basis do you believe they were not ARRL members?

I think the matter was pretty well reported in QST. A search of the index should produce a few articles and news items.

My point exactly. Those who read your message will infer that something that an old time CW op tells them that most people will not learn unless they have to learn it to pass a test is not worth learning. I believe that you are wrong and that CW has enough value that people should learn and use it even if they are not tested for it.

>> You choose the latter every time, and argue with me when I say the former.

I don't believe that you want CW to go away, Dick. I believe that the things you are saying, in your belief that saying them will somehow save the test, are going to talk new hams out of learning CW.

If the test is dropped, will you still tell new hams that most people will not bother learning CW because it is not tested, or will you be saying different things to try to explain the value of the mode?

The reason Cecil and others believe you don't seriously
want CW to continue is because your comments here simply
do NOT convey any great dedication to the mode. It
is as if you want CW to die out so you can then say..."See,
I told you so." Your mileage may vary...but that IS
the perception YOU have created for yourself.

Cheers,
Bill K2UNK

As an NCI director, let me state the following...I encourage every new
ham to look into ALL the options they have in terms of modes,
technical areas of interest, etc...that would also include morse code.
I do NOT discourage anyone from pursuiing morse or any other
aspect of ham radio.

What you implied is that there may be some "unknown" reason
that morse might not be subject to the Shannon's Theorem limits.
What else can your "fell through the crack in Shannon's
Theorem" statement mean? Shannon's Theorem has NO
known cracks and if you can demonstrate in any way that morse
code use in any actual situation defies Shannon's Theorem, then...
as Cecil stated...you would be famous.

That's a common thing in many hobbys. Once the kids are grown and gone,
and typically, the career path has lead many people to higher income
positions (as opposed to starting salary ranges when first employed), people
have more money to pursue hobbys that cost money. Additionally,
the empty (or emtying) nest situation usual results in more free time.

Phil, overwhelmingly, when a ham is sitting at an HF radio, he will talk to the strangest of strangers. Whe he is sitting at a VHF radio, he wants only to talk to his closest ham friends. Extremely cliquish.

Go to meetings and meet the people. Then they may be more apt to talk to you on their repeaters (be sure to join and pay their ransom). Or go to simplex. You might have better luck there. A 160W amp in the trunk doesn't hurt.

Whatever you do, don't try to put up another %$&*@ vhf repeater. You won't get anyone to talk to you there either.

W1RFI wrote, about Mr. Carrol's comment that I was a new Tech
who understood CW :

>In spite of your saying that CW is not worth learning unless it is tested!

Two things were working for CW with me. First, from way-back-when
CW was seen by me to be an integral part of the avocation. Secondly,
getting the chance to watch it in action, used by a neighbor, sealed the
deal. So, I'm kind of a special case.

It's spring break here at the University of Missouri and the family and I
are going on a "mini-vacation" by car over the next few days. My ARRL
code tapes are in my camera case, along with a small tape player and
a set of headphones. I've been studying the General material seriously
for several days now and so, with any luck, I can take and pass those
two elements in April. We'll see.

> But what about the public policy aspects. Is there a band plan
> for bow and arrow?

Yes, in point of fact there is. In my state special hunting seasons
are set aside for archers, and archers are allowed to hunt in some
areas that are closed to firearms.

> Is there any FCC involvement in that sport?

Why in the world would the FCC be involved in archery?
Talk about strained analogies!

> Are there organized groups out there sharpening their knives
> to do away with ranges for bow and arrow?

Nope. Neither is anyone sharpening their knives to
do away with CW "ranges". CW is in fact the most favored
mode in ham radio, in that it allowed on virtually all of
our assigned spectrum, and I have seen NO effort to
diminish that generous allocation.

> No, sorry, your analogy is, as usual, off the point.

To the contrary, Cecil's analogy was precisely on point.

> Yes, sirree, it's all about HAVING FUN! And gee, I thought
> we boomers were the FUN generation! Little did I know that
> REAL GEEZERS were all about FUN!

But Cecil didn't say "it's all about having fun". In fact he
attached PRIMARY importance to emergency communications.
Your distortion of his position is dishonest at best!

> Turn out the lights, folks, its all over.

That's what the curmudgeons were saying 40+ years ago when
I qualified for my first license, but ham radio just keeps getting
better and better.

Are the majority of people who want to see the code requirement lifted, are they those that have not put the time forth to learn the code?
Here is the point at least learning the code takes a sort of discipline and an effort to show you are serious or dedicated to amatuer radio, if not I am afriad it will turn into 11 meter free for all. You want to remove the code and what leave the question pool as it is ? Christ they already give yo the answers, all you need to do is memorize the answers and not know anything about radio. Imagine if they got rid of the road test when you took your drivers license, and they gave you all the answers to the written test. Think we would have safer roads?

Does anyone have a source for the male cable plug that would mate
with a 7-pin miniature tube socket?

I don't think that Amphenol even makes such a critter any more.

Policy Reference - it's a good policy to use the proper plug for the
socket rather than poke wires into the holes.......

2287. 15wpm hump

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-23 22:52:21 UTC
From: CAM <Cecil.A.Moore@IEEE.org>
Message-ID: <3C9D0725.785096D5@IEEE.org>
Source record: 38280

No matter how hard I try or how many hours I practice, I just can't seem to get past 15wpm hard copy. I cannot seem to buffer more than four characters so any word longer than four characters becomes a random stream of characters. If the actual words are the expected words, I can copy 20+ wpm. But if the actual words deviate from the expected words, I am lucky to copy 10wpm. For instance:

If I am copying f-u-t-u-r- and the next character is "e", I am perfectly OK. If the next character is "i", my entire copy of that word is blown. The unexpected character causes a different subroutine to be executed in my head and it takes a couple of seconds to recover. In the meantime, I have missed one or more words.

Is this an unusual problem? Are there any solutions?

It is my considered opinion that everyone who wants
to be on HF is already there, and that the awaited drop
of Morse testing will result in only a modest trickle of
new HF operators.

> Is this an unusual problem? Are there any solutions?

It's a common problem. When training Navy radio ops it was called "word anticipation", and we solved it by training the ops with completely random "nonsense" practice tapes. The character sequences ("words") were of random length and contained no recognizable words. Hard copy thus became a completely automaton-ic connection between the eardrums and the fingertips, with no intervening conscious mental processing of any kind.

Yes, speaking from years of experience, and I love CW, you just need to get on the rrap net with Dixie and Jim and let them push you a little harder. You'll only improve if you're challenged.

Yes, Part 97 allows only serious and dedicated applicants to enter the
service. Thats why we stopped the draft.

if not I am
> afriad it will turn into 11 meter free for all.

That's why we have Riley. We don't need a code test to make people behave.
Look at WA8ULX - he passed a code test.

You want to remove the code

Not at all, Cecil, you are perfectly normal - for this purpose at least
:-)

Morse is a language like any other and is learned in somewhat the same
way, immersion generally if one is really going to be any good at it, but
that is hard to do anymore. So like someone learning Spanish it helps to
have some background in the structure of the language so he is not totally
faked out when Revolutionary Armed Forces of Columbia comes out as FARC
and realizes that English puts the modifiers out front and need buffering
where in Spanish you are told what is being modified first, or that German
separable verbs can leave you in buffer mode for quite a while before
telling you what is really happening geworden sein. So back up and
contemplate what is reasonable to expect.

Most decent methods of learning Morse will deliver you to about 16 wpm or
a good Journeyman level varying only in the number of bad habits you have
to unlearn. I have had people make it to this level from 'gentlemen, this
is a dit' in 32 days best and 40-45 commonly. This is why, BTW, a number
of us are not totally convinced that 5wpm is not more deadly to the mode
than no test at all. Your brain apparently is still fully engaged and
this is why you are not copying more. Being the competative soul that you
are you want to measure progress and you have spent a lifetime using the
grey cells so you are running in a mode comfortable and habitual to you
that unfortunately limits your copy.

My suggestion would be a good random character generator set to about 25 wpm. Set yourself up with a group of 5 or so letters you are going to pick out of the mess (I always started with A, W, J, 1, and AR AS prosigns followed next by N, K, C, Y, 6 and worked from there with similar-sounding characters to cure anticipation) and throw your brain a bit of a curve. You are at a point where you are going to need a whack on the head and copying 5 letter groups at 25 will get the brain disconnected in a hell of a hurry. Try Morse Academy at http://ah0a.org for a fully adjustable generator. Use it's features as you will, you are an adult but I would both use groups to bore your brain stiff and make enough of a jump to require sweaty palms.

In my case, running a kw on 20 CW overnite for Field Day blew me out of the rut. When the birds and the crickets at 5AM as I was filling the generator told me I was 5-9 in South Jersey a whole new world opened up. I passed the Extra about 10 days later and the FCC lady did not even react to being given the first 375 characters in five-letter groups; she counted 100 and moved on.

Ultimately you are going to have to do it with guys that have been at it a really long time. Immersion is ultimately the way to learn but a bit of classroom takes the tension out of it. You just need a real challenge instead of more of the same.

The majority of those on the No Code (test) Int'l have, indeed, passed
a code test. Most, in fact, passed code tests at 13 or 20 wpm.

> Here is the point at least learning the code takes a sort of discipline
and

PLEASE.....tell us all where the rules and regulations in Part 97
make any statement that even remotely suggests any need to
"test" for someone's dedication to amateur radio or to test how
serious they are about amateur radio.

> You want to remove the code
> and what leave the question pool as it is ? Christ they already give yo
the

> about radio.

Same old arguments. Ineffective today as they were on
the FCC during the NPRM comment period.

> Imagine if they got rid of the road test when you took your
> drivers license,

You get a driver's license to DRIVE...the road test is 100%
related to the licensing. Passing a CW test doesn't ensure safer
or better airwaves. Never taking a CW test creates no
"danger" to anyone.

> no a
and they gave you all the answers to the written test.
> Think we would have safer roads?

The anlogy has no basis in relation to code testing.

No kidding. The Tech exam, which was the General exam in 1986, has become the entry level exam after folding the Novice exam into it and 16 years of beefing up the content. Since it conveys no HF priveleges, why fold the Novice in to it? Who thinks this crap up?

One amateur license with all priveleges, we'll call it "Amateur," and one entry license with limited priveleges, good for a couple of years or age 18, whichever comes last. We'll call that one "limited."

Phil, ever wonder why a 20meg hard drive won't even hold Windows 2000
Professional?

We're not interested in efficiency or we'd still be using DOS 3.32 with 512k
of ram.

15-20 years ago, efficiency in software (i.e. lines of
code, hard storage, RAM, etc.) were prime considerations
in telecommunications equipment. Megbytes of memory
were expensive. Today, storage, RAM and processing
is dirt cheap...hence, not a significant concern. The place
that does get expensive is route miles. Efficiencies in
passing voice/data down the lightwave communications
paths are where significant cost savings are being worked
on. Several companies make fibre transport equipment that
carries over 1 Terrabit of digital bandwidth. At that, the
"across the pond" routes are not easily upgraded to such
new higher speed technologies and, therefore, efficiencies
in voice bandwidth (compression algorithims) to reduce
channel occupance of 64Kb per voice call to as low as
8Kb per call are also being developed and improved.

Cheers,
Bill K2UNK

>When they represented me during the restructuring period, I would have
>preferred they didn't.

From what I have seen of your views on restructuring, ARRL did not represent you in the restructuring matter. The League very much realized that there was a wide range of opinion on the subject. They put forth articles (QST and web) on various strawman proposals and articles on their position wrt the restructing rulemaking. Those articles very clearly encouraged hams to file their own comments with the FCC.

I think comparing Cecil to a murderer is extreme. You really shouldn't do
that.

So, I guess I shouldn't be surprised that
> you seem willing to execute the thing you use the most!
> Of course, you won't be around, most likely, when the
> hammer finally falls, will you? Apre mois, le deluge?

Decades of non-enforcement of CODE TESTED amateurs appears to be a bigger
problem. Riley is still working through that mess.

> >[Why should] CW be singled out and tested as a skill?
>
> Lots of reasons, especially to get on HF, especially as,
> say, an Extra.

Why? Because the Extra has to pass a RTTY operating exam? A SSTV operating
exam? PSK31 operating exam? There's absolutely no valid reason today that
any amateur needs to pass a Morse Code exam.

Fascinating. You have no experience with Morse Code, CW, or amateur radio at all, and you've got all these wonderful opinions already. Welcome to rrap. Your opinion counts as much as anyone elses here, in my opinion. Others on here won't give unlicensed opinions the time of day.

But I'm curious where you've developed such a deep seated need for code, having had no actual experience with it. How old is the literature you're studying or reading? Maybe I can point you to some fresher stuff.

> this; it doesn't look good . . . and it completely trivializes
> Ham Radio. Wow!

Hanging on to the code exam trivializes amateur radio. Knowledgeable people roll their eyes when they hear "amateur radio" and "high tech" in the same sentence. Find something relevant and examine that instead.

Which is now the same speed as the first code exam, back when code was a
vital mode of communicating.

Val, we've had more enforcement in the last 3 years than we've had in the
last quarter century.

I know the ARRL didn't. That's why they were unprepared for the noi/nprm.
But we've gone over this again and again.

What factions? Another conspiracy?

now shift gears and
> push to allow as much phone space as they can get?

No, its the ARRL that's pushing for refarming the old Novice CW-only freqs.
Its a good idea only in that it will now allow Novices to initiate QSOs with
Generals rather than wait for Generals to drop down to the Novice ghettos
and pass out welfare QSOs. It's only about 25 years late.

> Val

Screw phone. How about automated, unmanned digital networks forwarding
and/or repeating traffic?

Ed, lets think about this. If you "hear" the same number on CW as on SSB, and if CW always gets through, then there are far more SSB signals out there. You just can't hear them all.

And what of the SSB Op who'se digging SSB signals out of the mud? Are their efforts somehow diminished because they're using the "wrong" mode?

My mistake.

I thought you meant 'hard' copy which implies transcribed (not conversational) communications.

The truly fast Morse copiers do not copy in their head, but transcribe it as a string of characters without 'thinking about it'. In fact, until they read it off the paper they typically have no idea of the content of the message.

Source record: 38321

I have mixed emotions. While I am certainly not the most learned ham around, I ran into a
situation that illustrates what I HAVE learned. Just the other day, we had quite a bit of rain.
I noticed that my performance on my screwdriver had deterioriated somewhat, and I somewhat sniffed the odor of rat. I tuned the radio down the band from 10 meters (but not
the antenna) and discovered I had a nice "match" in that I could run full power on 20 meters
with the antenna sitting on 10 meters! Now wait a minute--NO WAY! I took the antenna
and mount off to see what was the matter. It only took a few minutes to discover that just
enough moisture seeped down thru the quick connect for a "short". But it so happened that
it wasn't really a "short", but that the amount of moisture was juuuuuust enough to form a kind of "capacitor" at 50 ohms that let the radio load into the mount. Just like a dummy load. Nice for the finals, but no signal worth a damn.! I had been meaning to remove the antenna anyway and perform some regular maintenance, so I cleaned and dried up
everything, replaced a few little bolts, crimp connects, etc. and put it back together. Well,
whaddya know; the antenna goes back to it's narrow-banded self!

Now this little revelation is not earth-shaking at all, but not THAT many years ago, it would
have totally had me flummoxed. Then I really began to dig into antenna theory and circuitry,
etc. and found some interesting little tidbits about the relationship of RF to ground, impedance, and a few other little things that had, prior, been secret to me.

The information and knowledge is still out there for those who really want to know it, but I
do wonder, admittedly, if we aren't completely consumed by the I-want-it-right-now-and-
you-better-give it-to-me mentality. Sure, CW is not as important as it once was, but it was
an apple I had to peel to get at the meat. I am not saying that everybody should do it because I did it, just that conquering a token speed of 5 WPM (which is painfully slow, BTW) is a small signal that one is willing to crack the nut to get at the sweetmeats. I don't
know if the two issues are even related, but I do notice that folks tend to memorize the tests, plug in a radio, and never continue the study that will unlock a whole fascinating world

beyond just yakking on a radio. And when they run into a small problem, they haven't a clue. When they upgrade, they have NO idea how HF behaves, nor how to even install their own equipment ("Uh, what did you say? What is 'impedance'--never heard of it). They can't even figure the length of a halfwave dipole. No, I'm not making fun--I started right at the same place, and I STILL don't know it all; far from it. I am not afraid to ask a fellow ham how something works if it stumps me, but OTH, it is gratifying to have a problem like I mentioned and be able to recognize what is going on, then repair it and have
it WORK. All I am asking, will the ones who come along WANT to learn if there is no
apple to peel, no nut to crack to get at the meat?73

QSL Big Time. Having had the chance watch one of two old WW2 types go at it when the other one was the communication in his town for a few hours they don't have a clue what is coming thru. All you hear is an old Underwood being beaten to death under the impression it is a model 15 sometimes one-handed as he pours a coffee or dials a phone. My function was to supply paper and ultimately take over the phone. It is a truly astounding sight the first time you see two good ops go at it. And when it was all over you even had the written record with counts checked when the traffic deserved it.

At the same time, I would not want to go thru what he did to learn the skill. He will be 84 in October and it is apparent how much of his hearing he left in the Pacific. I learned from him and still prefer a good growl to the 750 Hz that most rigs force on you for a sidetone. The QSK rigs of the vintage were a tad slow on come up so I picked up that habit and have been accused of sending with a drawl but I don't even try a bug anymore. Electronic keyers are not a dead waste.

Well said, Jerry. There is players and there is fans and both serve a purpose. Playing is more fun but now and again you have to get used to looking like a total nincompoop and depend on the mercy of other people who know what nincompoopery looks like.

We had a severed coax on one of our Sunday bus UHF rigs so I pulled back the shield about six inches and got her into the repeater for the run. Always fun to pull a MacIver and watch the heads shake.

The QPs -are- larger. The exam you took is the old General and Novice
combined, and years of layering new stuff on top. It is far too difficult
an exam for youngsters. While Pepsi and Mitsubishi are killing themselves
trying to develop brand loyalty in the younger crowd, amateur radio bumbles
along...

We gotta make everything "harder" because code is being deemphasized. My
only question is "Why?"

Holy Cow!!! Larry appears to be backing away from his Black Heart view of
restructuring. Val is an adult, has been a member of an astronomy club for
2x something years, had the opportunity to become a ham under pre-1991
rules, had the opportunity to become a ham during the decade prior to the
latest restructuring, and now Larry declares "(through no fault of your
own)."

Why? No where in Part 97 is there a line expressing the government wants
faster code. The ARRL took it upon itself to force 13wpm code (disguised as
Farnsworth Code, not Morse Code) on unsuspecting newbies who don't know any
better. Now all the VEs are doing it.

That would be worthy of an article in QST. The ARRL has been interested in
the marriage of technologies articles, with amateur radio as the tie-in.

> The QPs -are- larger (today).

The reality is that the QRZ site uses the actual question pools.
If published pools were done away with, anyone could
still get all the questions via the QRZ site. It'd only
take a day or so for all the questions to be published on
the internet. (please, no counter arguments about copyrights
since we all know how effective that approach is to
limiting anything via the internet...and the questions are not
copyrightable because they are products of/for federal
regulations)

Making the pools larger is one area I (as well as Ed Hare
and others) have suggested, especially regarding formula/equation
solving. There's no reason that the three varieties of ohms
law (given two of the three variables of E, I and R) solve for the
missing. If each variable had at least 10 values in the question pool
that would create at least 200 possible answers when solving for
the third. Not many people will just memorize that.

Cause Larry, Dick and others want a "work ethic", a show
of dedication, a variation of the "I walked to school 3 miles
uphill both ways" mindset. AKA - The "I did it, so should you" crowd.

Cheers,
Bill K2UNK

Brian,
As you know, I am 100% against the code test.
BUT, the reality of learning morse code is that it
is better to learn to hear the characters
at 13 wpm with 5 wpm spacing.

In reality, that benefits the
test taker because it gives more "dead space" time to
process and identify what the character sent was. Use of
"Farnsworth" makes far more sense that sending characters
at 5 wpm.

Cheers,
Bill K2UNK

Interesting thoughts too.

If Val has the set-up to track the satellites...to which
he has slaved a telecope for photographing the
satellites, then that same "set-up" could drive a
small dish to really zero in on the satellite for
listening as well as transmitting to the satellite if
it has ham capabilities..

Cheers,
Bill K2UNK

The interesting fact about the poll taken by DARC is
that only about 1/3 of DARC's members even cared
enough to vote ... thus, the result represents a 52%
"majority" amongst only 1/3 of the members ... and
I don't believe that membership in DARC is required
to hold a German license, so it's probably well below
52% of 1/3 of German-licensed hams ...

Kim,

I am certainly not joining this thread to get into an argument with you--or
anyone for that
matter. But this discussion and your post above begs a question in my mind:
If you cannot
read Morse, well, don't use CW, how do you know whether there was CW traffic
WRT
the 9/11 incident? I am just asking, not trying to put you down.

LOL!

If one never continues to study and learn within the hobby, only content to work DX on
phone, and take the rig to the shop when it breaks, he/she will never know the gratifying
feeling of solving even the simplest little difficulties that are bound to cause one's hand to
aim for the back of the head for a scratch. And the thing is for me, even after years and
years (many of which were prior to ham radio), I have only begun the journey to find a
head that doesn't itch! Mine gets scratched on a regular basis! LOL!

Cecil,

I have to agree with you. Moreover, I don't think I have ever been ambiguous about how I
feel about covenants and neighbors telling me what I can and can't have on my own property. As to being "Libertarian", I am probably as libertarian as they come when it comes to what I can do on my own yard. I am not unreasonable, but I have lived in a place
where I have not had any trouble with antennas or unhappy neighbors. I deliberately oper-
ate my ham station late at night so as not to bother anyone, with an occasional foray onto
40 and 20 meters during the day. But I don't stay on there ragchewing constantly because I
am mindful that I just might bother someone's soap opera. I don't know that I DO bother
anyone because no one's ever mentioned it to me.

But when I get some nosey, busybody old blue-haired lady lookin' at me over Ben Franklins and trying to scold me over something I "can't" have, then I will go to war, and she most likely won't like the verbal response she gets. Failing in any attempts to abate the
issue or win in court, then I will simply move out into the country where the neghbors are
at least 1/2 mile away. Unlike California, we still have some isolated areas around here that
don't have CC & R, and most cities and towns don't have antenna statutes, or scanner laws.
And the blue-haired old lady can promptly get in her Cadillac and go to hell via the shortest
route.

Not really compared to what they replace and the problem they are intended to solve. Florida did it mostly as a reaction to the uninsured and simply transferred the first $10k to the victim. New Jersey is the epitome of the Trial Lawyer Rape and Relief Act which solved the lawyer's problem of clients running out of money before trial.

Handling injuries at retail is expensive and the object of the exercise is to keep the expense level down, stop overcompensating children's head bumps, and make the payments more certain.

I do not know what Delaware's threshold is these days; I hope it is more than the original $10k but their approach was unique. Driving is inherently a dangerous activity so one must insure himself against the first $10 k or whatever which is deducted from any judgement. Say it is 10 and you have a 25k claim which in most cases requires about 45-50k to pay the expense. So the jury gives you 50, the judge deducts 10, the attorney gets the customary 40 percent of 40k or 16 and the plaintiff is where he belongs after all the wailing moaning and groaning but the lawyer gets less. Not a huge improvement if the threshold is 10k but now say it is 25k which happens to be the Financial Responsibility Limit in both NE and WI and for all the moaning the lawyer is cut in half and the plaintiff gets not a lot more than if he had simply gone back to work. I think the whole bill was on one page. It had a salutory effect on the plantiff's Bar.

A Tort System which is what most states are still on has several failings beyond expense.

1. You may be a decent driver but the underwriter looks not so much at you as the victim you are likely to hit. The elderly particularly get no benefit out of being on Medicare or military medical. Neither group has

any income to lose so they get reamed again.

2. You can insure the world to $300 k on a single limit or God knows with an umbrella with absolutely no assurance the world has done it for you. Anyone who believes compulsory insurance works need only look at NY where it has been compulsory longer than anyone in this group is old. The NYPD goes up to the South Bronx to confiscate license plates? Sure they do.

3. Minor injuries are over-compensated, major ones badly undercompensated.

4. Sorting out duplicate payments and who pays what is a major element of the cost of insurance in general.

This is not the place to hash it out but I would be wary of blanket statements like that one Brian. Sounds too much like Digital Good, Morse Bad, New Good, Old Bad.

Dick BK

Morse is my favorite operating mode, and I can operate comfortably
at 40+ WPM.

I don't care one way or the other if there is a Morse code test
as a condition to entry to amateur radio.

CODE??? Ya mean I gotta learn Morse Code to talk on amateur radio?? How utterly revoltin'!! OK, OK......trollin' motor off <G>.

Seriously, I just passed my Element 2 test a week ago and am still patiently (??) waiting for my callsign. Yes, it was
quite easy (I missed one). I didn't memorize, but I did read "Now You're Talking" nearly 3 times to finally grasp what
I needed to know. Too easy, after only studying for a week & a half?? I'm not an 'old-timer' so I have no reference
point. I've been studying code since I passed the Technician test, and think perhaps I will actually be ready for the
test when it's offered the middle of next month. I live in an extremely small farm town and really haven't much use for
cross-town communication. I doubt there is even a repeater that I could reach from here, as the closest town of any
size is 40+ miles away. My goal is to talk with people in other states, other countries. You know, what people THINK
all hams do.
I also want to continue increasing my code speed to the point where it would be 'acceptable' so others will want to
communicate with me. What would be an acceptable code speed to actually begin making contacts without boring them to
death??
Subpart 97.503(a) of the FCC rules says "A telegraphy examination must be sufficient to prove that the examinee has the
ability to send correctly by hand and to recieve correctly by ear texts in the international Morse code at no less than
the prescribed speed..." So does this mean that when I go to take my test that I could be asked to send code as well as
recieve it?? Anyone know of this actually happening??
Everywhere I look I see iambic paddles (or other devices) for sending code. If I've read things right, they will send a
continuous stream of dit's and then you add the dah's where they're needed?? I'm not sure how these work but it seems
like I should first learn sending code with an old-fashioned key. Any hints, suggestions??
Sorry to jump into the middle of your conversation, but I've got 100's of questions.....

Not unlike Cecil, I memorized the stuff in high school and went
on to an Associate degree in electronics, 4 years military
electronics and a 30+ year career in telecommunications
field. OK, so maybe I didn't have a clue about that
colpitts oscillator diagram I memorized when I passed
the test...but I didn't hang up my brain after getting the
license either.

Cheers,
Bill K2UNK

Depending on the terrain, your antenna, the power you are
running you may have no problem reaching
repeaters even greater than 40 miles.

> My goal is to talk with people in
> other states, other countries.

Get your antenna(s) up now while you are waiting.

Once licensed for HF, get on the air as soon as possible
at the code speed you have when you pass the test. Good hams
will accomodate your "newcomer" status.

> Subpart 97.503(a) of the FCC rules says "A telegraphy examination

The test is recieve ONLY. The FCC dropped the sending
part of it quite a number of years ago.

> Everywhere I look I see iambic paddles (or other devices)

Start with the "old fashioned" key. If you really find a liking to
using morse code, you can move up to the "paddles" as you
see fit.

> Sorry to jump into the middle of your conversation,

All of those people for whom weak signal work is important, that's who.
Remebr, "CW" is NOT just manual Morse Code...There are numerous other
applications for those segments of the bands.

>The ARRL has. Which almost drove me away as a member.

We'll get them to try harder next time, Brian. Just what WOULD it take to
get rid of you?

>Anyway, the sands of
>time are scouring away the deep mental scarring of years of unnecessary
>Morse exams.

The only one's with "mental scars" are those who tried to "finagle", worm,
squirm, and otherwise try to find a way to NOT learn the code...Had they put as
much into learning it as trying to avoid it, it would have been a moot point.

>Why dredge it all up again?

Why ask why?

I remembering studying and studying CW (Farnsworth method) at 15 wpm because we fully expected to just "jump" in and get our General tickets (my husband and I). He did fine studying that way, but I could not gain speed with character recognition. I am a speed typist and call myself a pattern typist. I don't know if there's an actual name to the method but I type by word recognition. I know the pattern to words, and my fingers fly over the keyboard in that pattern. I applied this to my CW study and, as soon as I started learning words, my speed increased...alas but I only passed the 5wpm test...came close on the 15, but hung it up after the first try.

> K4KWH
>

That was my question, Jerry. I think (goodness knows things get so
convoluted in these threads) that the general belief was that no CW ops took
place for the WTC disaster.

I also have been moderately involved with EmCom since being a ham. I no longer hold my MARS appointment but used to do MARS net control, have done NTS net control, have done RACES net control, etc., by the way all via UHF/VHF, except MARS. Other than standard net traffic like reports, etc., there are rarely any messages carried via the VHF/UHF nets to any CW nets.

So, my observation, at least for this area and from what I've heard in other major EmCom events, CW is little used. But, I asked the question to see if any CW traffic had been conducted at WTC.

By the way, I am not Dick Carroll or Larry Roll, or Dave Heil. I don't take your questions or observations as arguments...LOL

>
> Is this an unusual problem? Are there any solutions?

You're trying to write down each character as it comes in. That will
only work well up to around the speed you are presently at.
Throw away your pencil and start listening for words. Tune in W1AW's
code practice
sessions that start at 35wpm and listen for words that you can
identify-the short ones such as and, the, it, me, this, etc, and try
to hear them as word sounds not individual letters that you
have to put together into words.You won't get much at all at 35wpm, but
by the time they reduce it down to 20wpm it begins to sound dead slow.
After a few sessions, at 15 wpm the copy -in your head- is dead easy.
You will be surprised. As you keep doing this, you'll build a CW
vocabulary and start hearing and copying complete sentences in your
head.
The only thing holding you back is your own impatience. Getting good
at it takes time.

The best way to get good at pencil copy (at speed) is to be good at
head copy first.

You're lying again, Cecil. I said they couldn't possibly be knowledgeable about all CW's attributes. Big difference and you know it. Val said he has long been looking over the shoulder of his CW ham neighbor. Val probably knows about as much about CW, without actually knowing the code, as you do.

> that "more to the story" is.

So why not just lie about every single statement I make? I said nothing about Shannon being wrong about anything. It's Cecil's application of Shannon to situations where it does not apply that is incorrect. Shannon never made an attempt to evaluate a specific communications channel, such as the one I was using. Shannon stated the maximum that was possible, not what one would find in any specific situation. When the channel I occupy allows CW to make it through when PSK31 cannot, for whatever reason, polar phase shifting in that particular case, then Cecil's misapplication of Shannon is not only invalid and misdirected but misinforming to newcomers.l.

Stop changing what I say! YOU said it isn't worth learning, not me. I said it is so much worth learning that the FCC should require hams to learn it! We already know from years of experience that most won't if they don't have to for licensing. You seem to be sure that all the "Hazing Ritual" crap spewed by Stevenson and Cecil and all the rest of the code haters will somehow convince them that it is indeed worth it! Amazing!

> I believe that you are wrong

You really think they will consider a mode that has long been branded as a "hazing ritual" by all the code haters to be worth even looking into? What planet did you say you came from?
And I DID NOT say "no one would learn it". I said so few will that it will die out as a viable useful mode. If so few people can use it that there is no one around to copy it, how can you consider it valuable?

When the Morse code exam is gone, the hazing ritual will cease to
exist. There won't be any reason not to learn Morse code.

But, but, but, Dick. You have said for years that someone who doesn't
know Morse code cannot possibly understand CW. I'm the one who said a
person can have knowledge about CW without having Morse code skill.
You denied that was possible.

I have explained a dozen times or more that your CW and PSK31 did NOT occupy
the same channel since you were trying to use a computer to copy PSK31
but not CW. What is it about that simple concept that you cannot comprehend?
You were NOT using the same equipment for both modes so your observation
is relatively meaningless.

There are three values in Shannon's theorem: Power, bandwidth, and throughput.
If these three values are not the same for two modes, a valid comparison
is not being made. An observation akin to yours is that 1000 watt SSB gets
through when one watt CW fails. So what?

When the code test hazing ritual ceases to exist there will be one less reason
not to learn Morse code.

> So now convince the Hazing Ritualists.

It is the code TEST hazing ritual to which we are objecting, Dick. Nobody
objects to someone choosing to learn Morse code.

> You really think they will consider a mode that has long been branded as a
> "hazing ritual" by all the code haters to be worth even looking into?

There you go again, Dick, confusing the code TEST with CW, the mode. It is
the CODE TEST that is the hazing ritual. CW, the mode, is NOT the hazing
ritual. CW, the mode, is a lot of fun and useful for some people and is allowed
almost anywhere on the ham bands. How you can still be confused about that is
beyond belief.

So Val is an exception to your statement. How many other exceptions to
your statement do you reckon there are? Enough to make your statement
false? If only 10% of new hams choose to learn Morse code and use CW
then your statement is false. I believe at least 10% of new hams will
use CW, maybe more.

People usually support the side that makes them happy, Dick. Why are
you supporting the side that makes you unhappy?

And who did you have in mind? Of the ones here that I think might fit your description, all have learned Morse code. Some of them use it routinely in their hamming. Cecil uses it almost 100%.

Do you think I need to tell them that they need to learn Morse code? Do you think I need to tell them other hams should learn Morse code? Cecil and Bill have been saying that they believe that Morse code has enough value that hams will learn it whether they are tested or not.

Bits is bits, but if the bits are not transmitted in a determinate state, they cannot be received so.

To date, humans are the best decoders of things like banana boat swing, especially those that sometimes send dahs shorter than dits. (I have heard this.) Humans have a capability of pulling together a complete picture from a partial description. I don't believe that the way humans do that is understood well enough yet that it has been duplicated in code.

Cecil has claimed a photographic memory. Most cannot memorize the material in the pools without understanding.

Even in 1963, I passed my General with a combination of learning, memorizing, lucky guessing and hoping that some of the tough questions did not appear on my exam.

Which is closer to what you did, Bill, the above, or rote memorization without any understanding?

2394. Changing Tests

Newsgroup: rec.radio.amateur.policy
Date: 2002-03-25 19:02:16 UTC
From: kb9rvb@arrl.net
Message-ID: <77f1797e.0203251102.38c7a678@posting.google.com>
Source record: 38437

Everytime a test is changed, what is lost is the ability to compare or contrast test results from year to year. Perhaps that goal is not as important to all who test as it seems to be to Ham operators.

Just heard over the weekend that the Scholastic Achievement Test (SAT) is contemplating a major overhaul of its question pool to reduce or replace many of its multiple choice analogy questions with written essays.

In my opinion, this change represents a different emphasis in what college admissions directors are looking for in college applicants. And that is the purpose of the SAT -- not to compare state against state, school against school, this year's students against last year's.

Every change in the Ham licensing pool should represent the same thing: a change in what a Ham needs to know in order to participate in the hobby with accompanying privileges.

To test CW or not, to test at 5/13/20 wpm; to test packet; to test antenna design; to test ATV -- would we be better adding more modes to the test than in reducing them?

Much of the rote memorization was without understanding.
I could solve equations (math was easy for me), but I didn't
understand WHY the equation "worked". Once I took
physics, we got through the basic concepts of Ohm's law.
It wasn't until college that I learned the derivation (and thus
the understanding) of capacitance, reactence, inductance, etc.

There were 14 diagrams in the ARRL manual that were
shown as the "Draw a diagram of..." type. I memorized
all 14 without knowing the "why" of how any of them
worked.

Cheers,

It worked fine for me. If you have a typical wood frame house without
foil backed insulation in the attic roof you'll get out OK. I run 100
watts to a 15 meter/10 meter (21 MHz and 28MHz) folded
dipole. I worked Europe, Hawaii, and many states without much
effort. If you can hear it, you can probably work it with the
attic antenna.

I'd suggest some serious random character copying practice. I got
mine from the 5-character spy stations. I'd sit and copy them for
about 15-minutes at a time several sessions a day. Got to 20 WPM
really fast that way. Are they still on-the-air -- or has the end of the
Cold War caused them to go QRT? I haven't really looked for them
for several years.

Unless you're ready to selfdiscipline yourself to Navy standards, go with head copy.

I got pretty good at copying coded groups, and when the need is to get it on paper, perfect copy with minimal fuss, there is no better way than to train to copy without knowing or even caring what you're copying. I passed the 18wpm 5-letter- groups test at the FCC office with flying colors, but then immediately -barely- failed the 20wpm plain language test for that very reason- I anticipated a word in the middle of a string where I had almost a full minute of perfect copy on either side of it, but not quite enough..(I anticipated the word 'additional' and the correct copy was 'adding machine'. I know that because he called me up to the desk and asked me if I knew what the correct word was, and I did not, and he told me. You don't have time to think about it in the middle of the test at 20wpm)..The examiner counted both sides twice before giving me the bad news.

That was during the morning when tests were given for commercial licenses, and I was going for the 2nd class radiotelegraph. That was the reason I never did get it. I came back that afternoon for the ham radio test session and passed the 20wpm on the Extra exam, though.

I have a question for all then.... If the argument of that Morse Code gets through when other modes don't may be true, what about relaying information? What about message traffic i.e. NTS??? It seems that most people using that argument seem to think that the distance MUST be the FURTHEST away and MUST be done with no intermediaries along the way.....

Just something that has been in the back of my mind as I read some of these messages over the past months....

It's difficult to just get 7-pin tube sockets, Phil. Welcome to
the new world of electronics. :-)

At one time, roughly 30 years ago, there were such things, also
tube tester "socket savers" and what I liked, an extender with
little tabs on the socket end rim that let one clip on leads or
scope probes.

You can do a Search for tube sockets and like things but those
will be specialty items for guitar amplifiers and vacuum tube music
systems. One place you might try is www.nelson-radio.com in
Roswell, NM. They are offering a whole kit of tube tester socket
savers, possibly built for military tube testers, but no price given.

Ask in r.r.a.homebrew too.

> Policy Reference - it's a good policy to use the proper plug for the
> socket rather than poke wires into the holes.......

Out of order, counselor! :-)

If things get really bad, just grab some connector pins that fit the
socket holes, solder or crimp wires on them, sleeve the
connection and run the wires any place you want. I've done that
way, way back in time.

Hmmm...that's right up there with knot-tying and sail-handling.
Will the Navy ever get to iron hulls and steam power?

How many Navy "radio ops" have had to train at being automatic
morse decoders in the last 30 years?

Cecil:

As long as it takes. Think how good a CW op you'll be by 2105!

>Are the majority of people who want to see the code requirement lifted, are
>they those that have not put the time forth to learn the code?

Yes, for the most part.

>Here is the point at least learning the code takes a sort of discipline and
>an effort to show you are serious or dedicated to amatuer radio, if not I am
>afriad it will turn into 11 meter free for all.

There is plenty of evidence that the HF phone sub-bands have been
that way for years. IMHO, there is not practical need to add to the
existing chaos by further reducing licensing standards, particularly
with regard to code testing -- but that's the way we're going, like it
or not.

>You want to remove the code
>and what leave the question pool as it is ?

Not me. The only thing that would be acceptable to me would be to
return to the Pre-Restructuring licensing standards.

>Christ they already give yo the answers,

I'll thank you to leave Him out of this.

>all you need to do is memorize the answers and not know anything
>about radio.

I'm sure that's not the intention, but that's usually the way it works out.

>Imagine if they got rid of the road test when you took your
>drivers license, and they gave you all the answers to the written test.

Actually, they did, in the form of a driver's manual. I'm not against the
concept of question pools, per se, because by memorizing answers to
the questions, you do, as an intended or unintended consequence, learn
the material. However, unless you have been exposed to the underlying
technical background explanations behind the Q&A's, you miss out on
a valuable part of your "education" in radio theory. I used the old
ARRL License Manuals for the majority of my licensing study, and found
the information easy to understand and more than thorough enough in
presentation to allow me to pass my tests while still retaining a working
understanding of the material. The question pools, while marginally
useful as a study aid, tend to give a prospective ham an "understanding
bypass" of some of the more complex subjects. In a perfect world, I

would prefer that a licensing syllabus be provided for each license class, outlining the topics covered in the tests, but requiring the testee to do his/her own research to find the answers, or the procedures and formulas for arriving at the answers.

>Think we would have safer roads?

Not unless we get rid of cell phones, lap dogs, about 80% of women drivers, 100% of all drivers from New Jersey and Eastern PA, all drivers over the age of 80, and any driver unable or unwilling to drive at least the posted speed limit on Delaware back roads.

Phil:

In over 25 years of going to hamfests, I've never seen such a thing.

> Policy Reference - it's a good policy to use the proper plug for the
> socket rather than poke wires into the holes.......

Could such a plug be fashioned by embedding some plain pins of
the proper diameter into an epoxy-resin base of some sort? I can
think of several ways to do this, ranging from crude to somewhat
refined, depending on the materials at hand and the ingenuity of
the person making the plug.

Hansl:

This is true in virtually every state in the country, since arrows don't
fly as far or as fast as bullets, and have a much shorter effective range.
Point?

Of course, we'll never know how good it could have been if we had
maintained our superior licensing standards!

>Of course, we'll never know how good it could have been if we had
>maintained our superior licensing standards!

It would be more accurate to say we don't know what the effect would have been. Those that are capable of achievement do so with our without "superior licensing standards." I would like to think that I am a good example of that. I was licensed at a time when the standards to obtain full amateur priveleges were a lot easier than they are now.

Most hams exceed the standards that they had to meet to be given a license. You have done that, too, Larry.

I do not see any problems in ham radio today that I attribute to the nature of the present ham tests. Enforcement? Much of the conduct that gets Riley's attention is done by hams who have met the standards you say are superior. Dumb questions? I sure had 'em, and some patient old timers answered them without railing on me and my license class.

I am sure they were around, but they didn't have rrap to give their sense of self importance a much needed boost.
